Foundation ASP.NET for Flash Ryan

Moore,2006-11-07 * No other book covers how to integrate Flash and ASP.NET, except the old friends of ED Flash.net book. Yet there is much demand for information on how to integrate Flash with dynamic server-side functionality. * Covers the latest versions of Flash and ASP.NET (2.0). * Written so that Flash and ASP.NET users can learn equally well from the book. * Includes several fully working example applications.

Foundation XML for Flash Sas Jacobs,2006-11-14 * Potentially huge market, due to Rich Internet Applications growing in popularity, and Microsoft Office and .NET development being so popular – this books shows how to use XML and Flash to integrate these MS technologies with simple Rich Internet Applications. * There is no other book on the market that covers this topic area. * Book supports next version of Flash, which is also a large market area.

Foundation XML and E4X for Flash and Flex Sas Jacobs,2009-02-21 XML is the lingua franca of the Web. All designers and developers working in a web environment need a sound understanding of XML and its role in application development. Many software packages and organizations allow for the exchange of data using an XML format. Web services and RSS feeds are now commonplace. For those working with Flash and Flex, a thorough understanding of XML is particularly important. XML documents are one option for the data provided to SWF applications. Flash and Flex can load, display, and modify XML content. These applications can also send XML

content to other applications for updating or for use in different situations. ActionScript 3.0 introduced some fundamental changes to the way in which Flash and Flex applications work with XML. One significant change is that XML is now a native data type. ActionScript 3.0 also introduced new classes and a different framework for working with external documents. These changes are based on the E4X ECMAScript standard, and they streamline and simplify the process for working with XML in Flash and Flex. In *Foundation XML and E4X for Flash and Flex*, Sas Jacobs gives you an introduction to XML and E4X. She explores the XML and XMLList classes and explains E4X expressions, providing examples for both Flash and Flex. In addition to explaining how to incorporate XML documents in Shockwave Flash applications, Sas shows you approaches specific to Flash and Flex and explores real-world usage. The book finishes with two case studies. In the first, you will learn how to consume and display information and images from Flickr using Flash. In the second, you will work with Adobe Kuler in Flex. Whether you are a designer or developer, this book will help you work with XML and make the transition from ActionScript 2.0 to ActionScript 3.0. It will also provide you with an excellent grounding if you are new to Flash and Flex.

Foundation Flex for Developers Sas

Jacobs, 2007-12-17 Flex is a very powerful and versatile technology for creating web application front-ends. But what every good web application needs is a robust data source, be it XML, or a database. Flex is very adaptable in terms of

connecting to data sources, and that is the main focus of this book. In *Foundation Flex for Developers*, author Sas Jacobs assumes that you've got the basics of Flex down already, and explores in detail how to create professional data-centric Flex 2 and Flex 3 applications. In the first half of the book, she starts off with a brief exploration of Flex and ActionScript 3.0, before looking at application essentials in detail—creating custom components, user and web browser interactions, binding, formatting, and validating data, debugging, and more. In the second half of the book, the focus is on connecting Flex to data sources, and covers XML, LiveCycle Data Services, PHP, ASP.NET, and ColdFusion in detail, via a series of step-by-step case studies. Covers Flex application basics
Covers connecting Flex 2 and Flex 3 to a variety of Data Sources

Flash Remoting: The Definitive Guide Tom Muck, 2003-09-23 Flash Remoting MX lets developers easily integrate rich Macromedia Flash content with applications that are built using Macromedia ColdFusion MX, Microsoft .NET, Java, PHP, or SOAP-based web services. The result is complex client/server applications that more closely resemble desktop applications than traditional web pages. Gone is the click/wait/reload approach of HTML. Your web application uses Flash as the front end while Flash Remoting handles the communication behind the scenes with the application server. All the end user knows is that it's fast and flexible. The potential uses for Flash Remoting are endless. Flash Remoting: The Definitive Guide will help you understand this breakthrough technology and use it to build your own Rich Internet Applications (RIAs). Build applications that connect to a database, file system, or other server-side technologies. Or, use Flash Remoting to create: online stores that feature catalogs and shopping cart systems sound and video clip libraries banner ads with built-in shopping carts, click-through tracking, and site search capabilities new controls that can be used in place of HTML extensions to Flash, Dreamweaver, Fireworks, and more front-ends to databases for administrators The book begins with Flash Remoting basics: setup, installation and an introduction to its underlying concepts. Next, you'll explore the Flash's User Interface components as they relate to Flash Remoting. Then, you'll gain insights into Flash Remoting internals and the Remoting API. The

book is rich with examples that you will be able to run on your own system. The next section focuses on the server-side environment that you'll use for your applications. Individual chapters cover Flash Remoting with ColdFusion, Server-Side ActionScript, Java, ASP.NET, and PHP. The last section covers more advanced Flash Remoting techniques, such as calling web services from Flash Remoting, extending objects and UI controls, best practices, and debugging. Plus there is a detailed chapter demonstrating a real-world application. The book concludes with a Flash Remoting API reference. Developers who are looking to create Rich Internet Applications with Flash will find Flash Remoting: The Definitive Guide indispensable.

Human-Computer Interaction. Interacting in Various Application Domains Julie A.

Jacko, 2009-07-24 The 13th International Conference on Human-Computer Interaction, HCI International 2009, was held in San Diego, California, USA, July 19-24, 2009, jointly with the Symposium on Human Interface (Japan) 2009, the 8th International Conference on Engineering Psychology and Cognitive Ergonomics, the 5th International Conference on Universal Access in Human-Computer Interaction, the Third International Conference on Virtual and Mixed Reality, the Third International Conference on Internationalization, Design and Global Development, the Third International Conference on Online Communities and Social Computing, the 5th International Conference on Assisted Cognition, the Second International Conference on Digital Human Modeling, and the First International

Conference on Human Centered Design. A total of 4,348 individuals from academia, research institutes, industry and governmental agencies from 73 countries submitted contributions, and 1,397 papers that were judged to be of high scientific quality were included in the program. These papers - dress the latest research and development efforts and highlight the human aspects of the design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

Flash .NET Gerald YardFace, David Neal, Pallav Nadhani, Graeme Bull, Chris Bizzell, 2013-12-14 The absolute cutting edge for application development at the moment is using Macromedia's Flash MX (the premier software for designing fantastic looking interfaces) with Microsoft's .NET framework (tremendously powerful server-side technology). Combining these technologies has been greatly aided by the release of Macromedia's Flash Remoting MX, which is covered fully in this book. Designers and developers involved in the creation of this technology impart their knowledge to you in this book through extensive case studies. Flash Remoting is not the only way to combine these technologies, however, so this book will fully cover Flash/.NET integration using ASP.NET. This book is for readers who are looking to integrate their Flash movies with a .NET-enabled back-end. It assumes no prior knowledge of server-side technologies, but does require knowledge of Flash

MX and ActionScript.

Discovering Computers Gary B. Shelly,Thomas J. Cashman,Misty Vermaat,Jeffrey J. Quasney,2006-02 This third edition, from the Shelly Cashman Series, covers the same breadth, but with less depth as *Discovering Computers 2007: Complete*. This title is ideal for a short course on computer concepts or in application software courses. With the Shelly Cashman Series' project-oriented, step-by-step pedagogy, and full-color screenshots, this book includes new exercises, and tools on the Online Companion.

Beginning XML with DOM and Ajax Sas Jacobs,2006-11-30 This book gives the most up-to-date picture of the topic—XML support in the most modern web browsers, creating XML-driven applications using the most versions of web standards and server-side languages, including CSS 2.1/3, DOM, XSLT and XPath 2, PHP 5, ASP.NET 2, and many more. The book shows that you can give the reader all they need to know to hit the ground running, without making them trawl through hundreds of pages of syntax. The book also

provides an introduction to Ajax-style programming, which is an essential topic for modern web developers to understand. XML is core to Ajax, so an understanding of it is essential when learning how to program Ajax functionality. This book therefore provides a great stepping stone for readers wishing to take this path.
