Logging the Redwoods Lynwood Carranco, John T. Labbe, 1975 Distributed by the

University of Nebraska Press for Caxton Press The giant redwood trees are one of California's best known attractions. Thousands of tourists visit the Northern California groves each year. The story of the California redwood lumber industry also tells the stories of the men, the trains, and the land. This book is dedicated to the pioneer lumbermen who succeeded in launching careers as mill men by overcoming the tremendous obstacle of moving the giant redwoods from the woods to the mill, by inventing equipment strong enough to handle the gigantic logs, and by finding suitable markets for their lumber throughout the Pacific area; and to Augustus William Ericson and the other early photographers who preserved the early history of logging in pictures.

IMF Staff papers, Volume 45 No. 4 International Monetary Fund. Research Dept.,1998-01-01 This paper describes the issue of corruption around the world. The paper surveys and discusses issues related to the causes, consequences, and scope of corruption, and possible corrective actions. It emphasizes the costs of corruption in terms of economic growth. It also emphasizes that the fight against corruption may not be cheap and cannot be independent from the reform of the state. If certain reforms are not made, corruption is likely to continue to be a problem regardless of actions directly aimed at curtailing it.

An Econometric Analysis of Countries' Repayment Performance to the International Monetary Fund Mrs.Lynn Aylward,Mr.Rupert Thorne,1998-03-01 While the literature on external debt repayment performance by sovereign debtors is extensive, repayment performance vis-à-vis the International Monetary Fund has not been dealt with

separately. Given differences between the Fund and other providers of financial resources, this paper considers whether it is possible to distinguish through logit analysis between the countries that make timely repayments to the Fund and those that become overdue. The paper finds that the inclusion of Fund-specific financial variables and a small number of macroeconomic variables yields a highly significant econometric model of the probability of a country incurring Fund arrears.
