This Poem Is a Nest Irene Latham, 2020-09-29 This beautiful poetry collection introduces readers to the art of found poetry as the poet writes a 37-line poem, Nest, then finds 160 smaller poems within it. What can you find in a poem about a robin's nest? Irene Latham masterfully discovers nestlings or smaller poems about an astonishing variety of subjects--emotions, wild animals, natural landmarks on all seven continents, even planets and constellations. Each poem is a glorious spark of wonder that will prompt readers to look at the world afresh. The book includes an introduction detailing the principles of found poetry and blackout poetry, and a section of tips

at the end. The joyous creativity in this volume is certain to inspire budding poets.

IFIP Bibliography, 1960-1985 International Federation for Information Processing,1987 In 1985 IFIP celebrated its silver jubilee and a quarter century of IFIP publications. This IFIP Bibliography lists and categorizes all of the published papers presented at IFIP conferences and congresses as well as further papers published in the name of IFIP in the first 25 years of existence. The Bibliography describes a comprehensive family of papers in the field of computer sciences, or informatics; it can be seen as an abstract monument for the volunteers who organized the events, composed the programmes, gave the papers and discussed and finally submitted the manuscripts; and it provides an overview of a quarter century of development, not only of a science and a profession, but also of a vocabulary and a language. The indexes list papers according to several different categories, enabling the reader to readily locate his source of interest. These indexes include listing by subject, by editor, according to the date of the event at which they were presented, under the name of the city in which the event was held and according to their TC/WG categorisation. Informatics is still a science of the future: much has been achieved, much more remains to be done, not only for the purely technical advance, but also for its humanistic and societal dimensions.

This bibliography, therefore, does not close the subject - it is merely a milestone on a long way to go.

The Neglected Ape Biruté M.F. Galdikas, R.D. Nadler, N. Rosen, Lori K. Sheeran, 1996-02-29 The orangutan is the most highly endangered species of great ape. Orangutans are threatened by deforestation, poaching, the illegal pet trade, and the isolation and fragmentation of dwindling wild populations. Their conservation is impeded by certain aspects of their ecology (e. g. , a rain forest habitat) and certain features of their life history (e. g. , an eight-to twelve-year interbirth interval). Added to the U. S. Endangered Species List in 1970, the orangutan is now clearly on the road to extinction. The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12,300 and 20,571 individuals. Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed. Clearly, attention to ecology, demography, censusing, rehabilitation, and conservation is essential if the orangutan is to survive in the wild beyond the next century. The protection of orangutans is a complex, multifaceted problem, involving such pressing issues as human poverty, overpopulation, and the economic development of Southeast Asia. Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world's zoos. In the past, scientific and public attention

has centered on the African apes. For this reason, the sole Asian great ape, the orangutan, has been called the neglected ape.

I Want My Book Back Viviane Elbee, 2022-06-28 A splendid story about the satisfaction that comes from sharing joy (and dinosaurs) with others.-- Booklist Emotions run high in this volume about a child's deep attachment giving way to sharing... Elbee's take on the emotional attachment that readers form with books feels apt, and a final portrait of Daryl discovering that books can be shared pays ample tribute to libraries. -- Publishers Weekly The book's fun illustrations emphasize Daryl's big and scary emotions, including distress, grumpiness, rage, and despair; solace is to be found only somewhere unexpected: in sharing.--Foreward Reviews Daryl loves the dinosaur book he checked out from the library; it takes him on roaring, stomping dinosaur adventures! So Daryl is unhappy when he has to return it, and he'll do anything to get his book back! Daryl loves to play with his favorite library book about dinosaurs. His imagination takes him to prehistoric places, and he pretends to be a triceratops, microraptor, and even a T. rex! But Daryl does not want to share his book, so when he has to return it to the library, Daryl goes wild. Using all of his dinosaur skills, Daryl tries his best to get his book back! But when a clever librarian notices Daryl's passion, she encourages him to share his favorite book and make some new friends along the way. This playful, silly, funny, tale about reading, books, and sharing is sure to be a hit with any child.

Cutting and Packing in Production and Distribution Harald Dyckhoff, Ute Finke, 2012-12-06 Cutting and packing problems such as the cutting

of sheet metal and the loading of containers or, in a more abstract sense, capital budgeting or assembly line balancing have been treated in scientific literature of various disciplines for about fifty years. Since the pioneer work of Kantorovich in 1939, which first appeared in the West in 1960, there has been a steadily growing number of contributions of increasing importance in this research area, particularly in the past decade. As of today more than 700 contributions exist even when applying a strict categorisation. Since comprehensive monographies and compiled studies are still lacking, it is very time consuming and thus expensive to search for a suitable solution procedure for concrete problems in the available literature. Thus, an apparently simpler way is often chosen, which is to develop one's own approach. For this reason there is not only the danger of unnecessary effort and scientific repetition, but it is reality. With the goal of improved research coordination an interdisciplinary Special Interest Group on Cutting and Packing (SICUP) was founded in 1988, which meets every two years (1988 Paris, 1990 Athens, 1992 San Francisco) and issues a semi-annual newsletter (SICUP Bulletin) with up-to-date information. This book is intended to assist in the coordination of research work in this area.

Floriography Jessica Roux, 2020-09-15 A charming, gorgeously illustrated botanical encyclopedia for your favorite romantic, local witch, bride-to-be, or green-thumbed friend. Floriography is a full-color guide to the historical uses and secret meanings behind an impressive array of flowers and

herbs. The book explores the coded significances associated with various blooms, from flowers for a lover to flowers for an enemy. The language of flowers was historically used as a means of secret communication. It soared in popularity during the 19th century, especially in Victorian England and the U.S., when proper etiquette discouraged open displays of emotion. Mysterious and playful, the language of flowers has roots in everything from the characteristics of the plant to its presence in folklore and history. Researched and illustrated by popular artist Jessica Roux, this book makes a stunning display piece, conversation-starter, or thoughtful gift.

Common Bees of Eastern North America Olivia Messinger Carril, Joseph S. Wilson, 2021-09-21 Bees play an essential role in the pollination of native plants and agricultural crops across the globe. In North America alone there are more than 4,000 bee species. In spite of their abundance and diversity, there is no accessible field guide for the non-expert. This book will remedy that situation by providing a carefully crafted introduction to bee identification for eastern North America. No portable field guide could include coverage of the myriad species in the region, so the book concentrates on identifying bees at the genus level. It includes information on the 72 different genera that are found east of the Rockies--

A New Garden Ethic Benjamin Vogt, 2017-09-01 In a time of climate change and mass extinction, how we garden matters more than ever: "An outstanding and deeply passionate book." —Marc Bekoff, author of

The Emotional Lives of Animals Plenty of books tell home gardeners and professional landscape designers how to garden sustainably, what plants to use, and what resources to explore. Yet few examine why our urban wildlife gardens matter so much—not just for ourselves, but for the larger human and animal communities. Our landscapes push aside wildlife and in turn diminish our genetically programmed love for wildness. How can we get ourselves back into balance through gardens, to speak life's language and learn from other species? Benjamin Vogt addresses why we need a new garden ethic, and why we urgently need wildness in our daily lives—lives sequestered in buildings surrounded by monocultures of lawn and concrete that significantly harm our physical and mental health. He examines the psychological issues around climate change and mass extinction as a way to understand how we are short-circuiting our response to global crises, especially by not growing native plants in our gardens. Simply put, environmentalism is not political; it's social justice for all species marginalized today and for those facing extinction tomorrow. By thinking deeply and honestly about our built landscapes, we can create a compassionate activism that connects us more profoundly to nature and to one another.

Annotated Bibliographies in Combinatorial Optimization Mauro Dell'Amico, Francesco Maffioli, Silvano Martello, 1997-08-28 Wiley-Interscience Series in Discrete Mathematics and Optimization Advisory Editors Ronald L. Graham Jan Karel Lenstra Robert E. Tarjan Discrete Mathematics and Optimization involves the study of

finite structures and is one of the fastest growing areas in mathematics today. The level and depth of recent advances in the area and the wide applicability of its evolving techniques point to the rapidity with which the field is moving and presage the ever-increasing interaction between it and computer science. The Series provides a broad coverage of discrete mathematics and optimization, ranging over such fields as combinatorics, graph theory, enumeration, mathematical programming and the analysis of algorithms, and including such topics as Ramsey theory, transversal theory, block designs, finite geometries, Polya theory, graph and matroid algorithms, network flows, polyhedral combinatorics and computational complexity. The Wiley-Interscience Series in Discrete Mathematics and Optimization will be a substantial part of the record in this extraordinary development. Recent titles in the Series: Local Search in Combinatorial Optimization Edited by Emile H. L. Aarts Philips Research Laboratories, Eindhoven and Eindhoven University of Technology, Eindhoven Jan Karel Lenstra Eindhoven University of Technology, Eindhoven and CWI Amsterdam In the past three decades local search has grown from a simple heuristic idea into a mature field of research in combinatorial optimization. Local search is still the method of choice for NP-hard problems as it provides a robust approach for obtaining high-quality solutions to problems of a realistic size in a reasonable time. This area of discrete mathematics is of great practical use and is attracting ever-increasing attention. The contributions to this book cover local search and

its variants from both a theoretical and practical point of view, each with a chapter written by leading authorities on that particular aspect. Chapters 1 to 7 deal with the theory of local search and describe the principal search strategies such as simulated annealing, tabu search, genetic algorithms and neural networks. The remaining chapters present a wealth of results on applications of local search to problems in management science and engineering, including the traveling salesman problem, vehicle routing, machine scheduling, VLSI design and code design. This book is an important reference volume and an invaluable source of inspiration for advanced students and researchers in discrete mathematics, computer science, operations research, industrial engineering and management science.

Catalogue of the Birds in the British Museum: Limicolæ, by R.B. Sharpe. 1896 British Museum (Natural History). Department of Zoology,1896 This enormous undertaking, which, according to one of the prefaces, professes to be a complete list of every bird known at the time of publication, kept growing even as it was being written. The Museum added eagerly to their already vast collections during the decades of publication, acquiring by gift the great collections of A.O. Hume on Asian birds, and those of Sclater and Salvin and Godwin on Neotropical birds, so that the size of the collection nearly tripled between 1874 and 1888. Sharpe originally intended to do all the work himself, but others were called in when this

became clearly impossible. The plates are all of birds not previously illustrated. In the decades following its publication this catalogue was universally acclaimed as the most important work on systematic ornithology that has ever been published. (Zimmer, p. 96). And even after one hundred years it remains an essential reference for the serious ornithologist, as it underpins a great deal of modern bird classification. With 387 plates, most hand-coloured lithographs, some chromolithographs, by William Hart, J.G. Keulemans, Joseph and Peter Smit.
