*Seven Wonders of Space Technology* Alfred B.

Bortz,2011-02-01 From earliest times, humans have looked to the sky in wonder, and their wonder and curiosity fueled science. Ancient peoples built enormous temples and monuments to observe the sun and track the movement of stars. And as scientific knowledge expanded, technologies grew more sophisticated. Each development changed the way we viewed our place in the universe. But no technology changed our understanding more than the ability to launch scientific equipment and human explorers into space. In this book, we'll explore seven wonders of space technology. Scientists and engineers have built vehicles and equipment to explore the farthest reaches of the solar system. Orbiting satellites and telescopes have given us everything from more accurate weather reports to glimpses back to the beginning of the universe. International teams have built an orbiting space laboratory and

are working on plans for human lunar settlements and missions to other planets. Learn about the people and the science behind these amazing advances in space technology.

**The Story of Astronomy** Anne Rooney, 2017-11-30

'Astronomy, as nothing else can do, teaches men humility.' Arthur C. Clarke, *The Challenge of the Spaceship* For thousands of years, the stars, planets, Moon and Sun were central to religious and superstitious beliefs. Astronomy has its origins in the context of these beliefs. From this starting point, scientific thinking emerged, as humans began to seek explanations for the existence of celestial bodies - explanations that did not rely on the supernatural. In the 17th century, the invention of the telescope marked a watershed, opening the heavens to scrutiny and revealing that the planets are other worlds. The wonders of space have multiplied ever since, puzzling and enthralling us. *The Story of Astronomy* charts our fascination with stars, from before Stonehenge to the search for exoplanets and extra-terrestrial life. This accessible, fascinating account of discoveries, from the times of Palaeolithic star-gazers to current space missions, shows how we have come to know so much about the universe. At the same time, unfolding knowledge has opened new horizons to explore. Our understanding of the boundless cosmos has only just begun. Topics include: Cosmology, from ancient times to the Big Bang Our place in the solar system Astrolabes, telescopes and radio astronomy Mapping the stars Space missions and probes Comets, asteroids, supernovae and black holes The unknown, from empty space to dark energy
