They're dedicated to protecting the American people by hunting down Tesla's most advanced technology and keeping it out of enemy hands, and it doesn't get much nobler than that. Majestic isn't just Total Science Bastards with Unlimited Gun Budgets, either. Behind every strike team is a score of intelligence agents, R&D specialists, and bureaucrats working around the clock. Step into their shoes with this supplement full of secret behind-the-scenes information on the workings of Majestic, its mission briefing process, and key players in this secret organization.

Nature and Numbers Georg Glaeser,2013-12-18  
Mathematicians with special interest in biology, physics, geography, astronomy, architecture, design, etc., and being prepared to take pictures at any time, might try to answer unusual questions like the followings: What do a zebra, a tiger shark, and a hard coral have in common? How is this with drying mud, wings of dragon flies, and the structures of leaves? What is the “snail king” and is there also a “worm king”? Which curves stay of the same type after being photographed? Do fishes see like we do if we look through a fisheye lens? Which geometric properties of an object have physical consequences? Which kinds of geometric patterns appear when waves are interfering? In this book you can find 180 double pages with at least as many questions of this kind. The principle to attack a problem is often similar: It starts with a photo that is for some reasons remarkable. In a short description an explanation is offered, including relevant Internet links. Additionally one can frequently find computer simulations in order to illustrate and confirm.

**Intelligent Autonomous Systems 12** Sukhan Lee,Hyungsuck Cho,Kwang-Joon Yoon,Jangmyung Lee,2012-10-18 Intelligent autonomous systems are emerged as a key enabler for the creation of a new paradigm of services to humankind, as seen by the recent advancement of autonomous cars licensed for driving in our streets, of unmanned aerial and underwater vehicles

carrying out hazardous tasks on-site, and of space robots engaged in scientific as well as operational missions, to list only a few. This book aims at serving the researchers and practitioners in related fields with a timely dissemination of the recent progress on intelligent autonomous systems, based on a collection of papers presented at the 12th International Conference on Intelligent Autonomous Systems, held in Jeju, Korea, June 26-29, 2012. With the theme of “Intelligence and Autonomy for the Service to Humankind, the conference has covered such diverse areas as autonomous ground, aerial, and underwater vehicles, intelligent transportation systems, personal/domestic service robots, professional service robots for surgery/rehabilitation, rescue/security and space applications, and intelligent autonomous systems for manufacturing and healthcare. This volume 2 includes contributions devoted to Service Robotics and Human-Robot Interaction and Autonomous Multi-Agent Systems and Life Engineering.

**Optical 3D-Spectroscopy for Astronomy** Roland

Bacon,Guy Monnet,2017-03-01 Over the last 50 years, a

variety of techniques have been developed to add a third

dimension to regular imaging, with an extended spectrum

associated to every imaging pixel. Dubbed 3D spectroscopy

from its data format, it is now widely used in the

astrophysical domain, but also inter alia for atmospheric

sciences and remote sensing purposes. This is the first book

to comprehensively tackle these new capabilities. It starts

with the fundamentals of spectroscopic instruments, in

particular their potentials and limits. It then reviews the various known 3D techniques, with particular emphasis on pinpointing their different `ecological? niches. Putative users are finally led through the whole observing process, from observation planning to the extensive ? and crucial - phase of data reduction. This book overall goal is to give the non-specialist enough hands-on knowledge to learn fast how to properly use and produce meaningful data when using such a 3D capability.

M65 Atomic Cannon David Doyle, 2019-09-30 A pictorial history of this powerful piece of artillery, an icon of the Cold War era. In 1949, the US Army wanted an artillery gun that could fire a nuclear warhead in the event that guided missiles and long-range bombers proved insufficient in delivering atomic weapons. The result was the M65 280mm Atomic Cannon. On May 25, 1953, at 0830 hours, an M65 of A Battery, 867th Field Artillery Battalion, let loose with the only nuclear round the type would ever fire. Six battalions of the M65 would eventually be deployed, most in Europe with one battalion sent to the Korean Peninsula. Though never used in combat, they served as a significant tactical nuclear deterrent. Through historic photos, this volume traces the development, production and deployment of this iconic piece of military equipment from the drawing boards to the Cold War battlefields of Europe.
