Unparalleled catastrophe Rhys Crilley,2023-09-12 After the first use of nuclear weapons in 1945, Albert Einstein warned that 'we thus drift towards unparalleled catastrophe'. Today we are no longer drifting but racing toward catastrophe at breakneck speed. This book analyses recent events that have brought about a dangerous Third Nuclear Age. From the collapse of arms control treaties and the development of hypersonic missiles, to the pop culture that shapes how we think about nuclear weapons, via how nuclear weapons intersect with the global threats posed by pandemics, populism, climate change, corruption, militarism, and racism, this book explores the nuclear zeitgeist of today. It presents the case for critical nuclear studies, and provides an important intervention into debates about nuclear weapons and international security. Today, the planet stands on the brink of catastrophe. This book tells you why, and what we can do about it.

Revisiting South Africa's Nuclear Weapons Program David Albright, Andrea Stricker, 2016-09-24
In 1989, South Africa made the momentous decision to abandon its nuclear weapons, making it the first and still the only country that has produced nuclear weapons and given them up. Over thirty years, the apartheid regime had created a remarkably sophisticated capability to build nuclear weapons-both the nuclear warhead and advanced military systems to deliver them. The program was born in secret and remained so until its end. The government initially sought to dismantle it in secret. It hoped to avoid any negative international consequences of possessing nuclear weapons. The apartheid government's strategy did not work, because too many intelligence agencies knew about South Africa's nuclear weapons. Faced with intense pressure, South Africa's President F.W. de Klerk reversed course and adopted a policy of transparency in 1993. However, he decided to hide many of its aspects. Nonetheless, most of the remaining secrets emerged over the ensuing 25 years. Revisiting South Africa's Nuclear Weapons Program draws on previously secret information to provide the first comprehensive, technically-oriented look at South Africa's nuclear weapons program; how it grew, evolved, and ended. It also finds lessons for today's nuclear proliferation cases.

Airman's Guide , 1960

Time Briton Hadden, Henry Robinson Luce, 1955-10

Whole World on Fire Lynn Eden, 2004 *Whole World on Fire* focuses on a technical riddle wrapped in an organizational mystery: How and why, for more than half a century, did the U.S. government fail to predict nuclear fire damage as it drew up plans to fight strategic nuclear war? U.S. bombing in World War II caused massive fire damage to Hiroshima and Nagasaki, but later war plans took account only of damage from blast; they completely ignored damage from atomic firestorms. Recently a small group of researchers has shown that for modern nuclear weapons the destructiveness and lethality of nuclear mass fire often--and predictably--greatly exceeds that of nuclear blast. This has major implications for defense policy: the U.S. government has underestimated the damage caused by nuclear weapons, Lynn Eden finds, and built far more warheads, and far more destructive warheads, than it needed for the Pentagon's war-planning purposes. How could this have happened? The answer lies in how organizations frame the problems they try to solve. In a narrative grounded in organization theory, science and technology studies, and primary historical sources (including declassified documents and interviews), Eden explains how the U.S. Air Force's doctrine of precision bombing led to the development of very good predictions of nuclear blast--a significant achievement--but for many years to no development of organizational knowledge about nuclear fire. Expert communities outside the military reinforced this disparity in organizational capability to predict blast damage but not fire damage. Yet some innovation occurred, and predictions of fire damage were nearly incorporated into nuclear war planning in the early 1990s. The author explains how such a dramatic change almost happened, and why it did not. *Whole World on Fire* shows how well-funded and highly professional organizations, by focusing on

what they do well and systematically excluding what they don't do well, may build a poor representation of the world--a self-reinforcing fallacy that can have serious consequences. In a sweeping conclusion, Eden shows the implications of the analysis for understanding such things as the sinking of the Titanic, the collapse of the Tacoma Narrows Bridge, and the poor fireproofing in the World Trade Center.

Unbroken (Movie Tie-in Edition) Laura Hillenbrand, 2018-08-21 #1 NEW YORK TIMES BESTSELLER • The incredible true story of survival and salvation that is the basis for two major motion pictures: 2014's *Unbroken* and the upcoming *Unbroken: Path to Redemption*. On a May afternoon in 1943, an Army Air Forces bomber crashed into the Pacific Ocean and disappeared, leaving only a spray of debris and a slick of oil, gasoline, and blood. Then, on the ocean surface, a face appeared. It was that of a young lieutenant, the plane's bombardier, who was struggling to a life raft and pulling himself aboard. So began one of the most extraordinary odysseys of the Second World War. The lieutenant's name was Louis Zamperini. In boyhood, he'd been a cunning and incorrigible delinquent, breaking into houses, brawling, and fleeing his home to ride the rails. As a teenager, he had channeled his defiance into running, discovering a prodigious talent that had carried him to the Berlin Olympics and within sight of the four-minute mile. But when war had come, the athlete had become an airman, embarking on a journey that led to his doomed flight, a tiny raft, and a drift into the unknown. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, a foundering raft, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality

with rebellion. His fate, whether triumph or tragedy, would be suspended on the fraying wire of his will. In her long-awaited new book, Laura Hillenbrand writes with the same rich and vivid narrative voice she displayed in *Seabiscuit*. Telling an unforgettable story of a man's journey into extremity, *Unbroken* is a testament to the resilience of the human mind, body, and spirit. Praise for *Unbroken* "Extraordinarily moving . . . a powerfully drawn survival epic."—The Wall Street Journal "[A] one-in-a-billion story . . . designed to wrench from self-respecting critics all the blurby adjectives we normally try to avoid: It is amazing, unforgettable, gripping, harrowing, chilling, and inspiring."—New York "Staggering . . . mesmerizing . . . Hillenbrand's writing is so ferociously cinematic, the events she describes so incredible, you don't dare take your eyes off the page."—People "A meticulous, soaring and beautifully written account of an extraordinary life."—The Washington Post "Ambitious and powerful . . . a startling narrative and an inspirational book."—The New York Times Book Review "Marvelous . . . *Unbroken* is wonderful twice over, for the tale it tells and for the way it's told. . . . It manages maximum velocity with no loss of subtlety."—Newsweek "Moving and, yes, inspirational . . . [Laura] Hillenbrand's unforgettable book . . . deserve[s] pride of place alongside the best works of literature that chart the complications and the hard-won triumphs of so-called ordinary Americans and their extraordinary time."—Maureen Corrigan, *Fresh Air* "Hillenbrand . . . tells [this] story with cool elegance but at a thrilling sprinter's pace."—Time "*Unbroken* is too much book to hope for: a hellride of a story in the grip of the one writer who can handle it."—Christopher McDougall, author of *Born to Run*

Technology in America Alan I. Marcus, Howard P. Segal, 2018-04-05 Now in a thoroughly updated new

edition, this successful textbook surveys the history of technology in America from the 1600s to the 21st century. Alan I Marcus and Howard P. Segal explore the effect society, culture, politics and economics have had upon technological advances, and place the evolution of American technology within the broader context of the development of systems such as transportation and communications. This unique book connects phenomena such as colonial printing presses with the American Revolution; early photographs with the creation of an allegedly unique American character; and high-tech advances in biotechnology with a growing desire for individual autonomy. This is an ideal resource for undergraduate and postgraduate students of the history of technology, the history of science, and American history.
