Nuclear Magnetic Resonance Krystyna Kamienska-Trela,Jacek Wojcik,2012-03-12 As a spectroscopic method, nuclear magnetic resonance (NMR) has seen spectacular growth, both as a technique and in its applications. Today's applications of NMR span a wide range of scientific disciplines, from physics to biology to medicine. Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic. This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications, in particular NMR of natural macromolecules, which is covered in two reports: NMR of Proteins and Nucleic Acids and NMR of Carbohydrates, Lipids and Membranes. In his foreword to the first volume, the then editor, Professor Robin Harris announced that the series would be a discussion on the phenomena of NMR and that articles will be critical surveys of the literature. This has certainly remained the case throughout the series, and in line with its predecessors, Volume 40 aims to provide a comprehensive coverage of the relevant NMR literature. For the current volume this relates to publications appearing between June 2009 and May 2010 (the nominal period of coverage in volume 1 was July 1970 to June 1971). Compared to the previous volume there are some new members of the reporting team. Theoretical Aspects of Spin-Spin Couplings are covered by J. Jazwinski, while E. Swiezewska and J.Wojcik provide an account of NMR of Carbohydrates, Lipids and Membranes.

Atomic Fossils Stephen Dustin,2000-10 Atomic Fossils is a fast-paced thriller you won't be able to put down! The U.S. government covertly excavates the wreckage of a mysterious ancient aircraft, uncovering a baffling assortment of artifacts. Half a world away, nuclear war rages in the Middle East, drawing the U.S. and Russia closer to global confrontation with each passing hour. One man discovers a secret in the wreckage—a secret so powerful it could avert the impending worldwide catastrophe. To reveal the secret, however, he must not only place his own life on the line, but also the lives of his family... and, there is no guarantee it will make any difference in the end.

Fizzics F. Ronald Young,2011-06-01 Bubbles are everywhere—in water and in air, made from soap and from gas. They are referenced in literature and sung about in songs. They are even the subject of great works of art. From the youngest child blowing bubbles in the backyard to the adult studying the fascinating science behind them, bubbles capture our imagination. F. Ronald Young's far-reaching survey of the humble bubble explores the complex behavior of these seemingly simple objects. If you stop to think about it, bubbles and droplets are the cornerstones of the world around

us. They are the reason that dolphins cannot swim faster, that the sky is blue, and that coffee rings form. They are essential to knowing how atom smashers work, how detergents clean dishes, and how to pour a perfect pint. Beyond these basics, Young shows how humans have put bubbles to use throughout history. Whether in technology—making fire-fighting foams and waterproof makeup—or in medicine—cleaning wounds and clarifying ultrasounds—bubbles are capable of more than most of us have imagined. With easy-to-understand explanations, detailed illustrations, and entertaining anecdotes, Young reveals the Fizzics behind these familiar—yet surprising—objects.

Biotechnology of Silk Tetsuo Asakura, Thomas Miller, 2013-10-21 This book is a snapshot of the current state of the art of research and development on the properties and characteristics of silk and their use in medicine and industry. The field encompasses backyard silk production from ancient time to industrial methods in the modern era and includes an example of efforts to maintain silk production on Madagascar. Once revered as worth its weight in gold, silk has captured the imagination from its mythical origins onwards. The latest methods in molecular biology have opened new descriptions of the underlying properties of silk. Advances in technological innovation have created silk production by microbes as the latest breakthrough in the saga of silk research and development. The application of silk to biomaterials is now very active on the basis of excellent properties of silks including recombinant silks for biomaterials and the accumulated structural information.

REBAZAR TARZS IN THE ATOMIC AGE DUANE THE GREAT WRITER,

Nuclear Theory Degree Zero: Essays Against the Nuclear Android John Kinsella, Drew Milne, 2021-05-13 Nuclear Theory Degree Zero: Essays Against the Nuclear Android investigates the threat conveyed and maintained by the nuclear cycle: mining, research, health, power generation and weaponry. Central to this polyvalent 'report' on the infiltration of our lives and control over them exerted by the industrial-military complex, are critiques of the creation, storage and use of atomic weapons, the exploitation of Australian Aboriginal people and their lands through British atomic testing in the 1950s, and an exposé of a language of denial in the world of nuclear mining/energy/military usages. 'Nuclear' is also parenthetically investigated in its function as extended metaphor and question for poetry and poetics. Key is a consideration of the use of the language of the 'atomic' in cultural spaces, and in 'the arts'. Indigenous land-rights claims in the face of uranium mining, the semantics of waste and of the glib usage by nuclear power companies of the fact of global warming to suit their own corrosive agendas. The triumphalism of scientific and cultural discourse around 'nuclear' and the threats by nuclear fission are by association brought into question. The nuclear cycle throws the whole future of human beings into doubt, and this book seeks to assemble new resources of resistance through creative and critical mediums, including poetry and poetics. The chapters in this book were originally published as a special issue of Angelaki.

Radiocesium Dynamics in a Japanese Forest Ecosystem Chisato Takenaka, Naoki Hijii, Nobuhiro Kaneko, Tatsuhiro Ohkubo, 2019-08-21 This book investigates radiocesium movement in all major components of forest ecosystems, e.g. the plants, animals, insects, microorganisms, and soils, during the initial stage of contamination after the incident at Fukushima Daiichi Nuclear Power Plant. Most of the work was conducted at a common research site. More specifically, the book examines the contribution of surface uptake by trees in the dynamics of radiocesium during the initial contamination stage; the movement of radiocesium in the form of small organic fragments that are essential to the radiocesium dynamics in forest ecosystems; and the upward movement of radiocesium due to microorganism activity, which promotes the effective decontamination of the forest floor. Lastly, it explains why spiders could be a valuable indicator of the contamination level in forest ecosystems.

Preventing Black Market Trade in Nuclear Technology Matthew Bunn, William C.

Potter, Leonard S. Spector, Martin B. Malin, 2018-03-31 Every nuclear weapons program for decades has relied extensively on illicit imports of nuclear-related technologies. This book offers the most detailed public account of how states procure what they need to build nuclear weapons, what is

currently being done to stop them, and how global efforts to prevent such trade could be strengthened. While illicit nuclear trade can never be stopped completely, effective steps to block illicit purchases of nuclear technology have sometimes succeeded in slowing nuclear weapons programs and increasing their costs, giving diplomacy more chance to work. Hence, this book argues, preventing illicit transfers wherever possible is a key element of an effective global non-proliferation strategy.
