Agrobacterium biology and its application to transgenic plant production Hau-Hsuan Hwang,Stanton B. Gelvin,2015-06-26 The broad host range pathogenic bacterium *Agrobacterium tumefaciens* has been widely studied as a model system to understand horizontal gene flow, secretion of effector proteins into host cells, and plant-pathogen interactions. *Agrobacterium*-mediated plant transformation also is the major method for generating transgenic plants for research and biotechnology purposes. *Agrobacterium* species have the natural ability to conduct interkingdom genetic transfer from bacteria to eukaryotes, including most plant species, yeast, fungi, and even animal cells. In nature, *A. tumefaciens* causes crown gall disease resulting from expression in plants of auxin and cytokinin biosynthesis genes encoded by the transferred (T-) DNA. Gene transfer from *A.*

tumefaciens to host cells requires virulence (vir) genes that reside on the resident tumor-inducing (Ti) plasmid. In addition to T-DNA, several Virulence (Vir) effector proteins are also translocated to host cells through a bacterial type IV secretion system. These proteins aid in T-DNA trafficking through the host cell cytoplasm, nuclear targeting, and T-DNA integration. Genes within native T-DNAs can be replaced by any gene of interest, making Agrobacterium species important tools for plant research and genetic engineering. In this research topic, we provided updated information on several important areas of Agrobacterium biology and its use for biotechnology purposes.

Clinical Care and Rehabilitation in Head and Neck Cancer Philip C. Doyle, 2019-03-21 Malignancies involving structures of the head and neck frequently impact the most fundamental aspects of human existence, namely, those functions related to voice and speech production, eating, and swallowing. Abnormalities in voice production, and in some instances its complete loss, are common following treatment for laryngeal (voice box) cancer. Similarly, speech, eating, and swallowing may be dramatically disrupted in those where oral structures (e.g., the tongue, jaw, hard palate, pharynx, etc.) are surgically ablated to eliminate the cancer. Consequently, the range and degree of deficits that may be experienced secondary to the treatment of head and neck cancer (HNCa) are often substantial. This need is further reinforced by the Centers for Disease Control and Prevention who have estimated that the number of individuals who will be newly diagnosed with HNCa will now double every 10 years. This estimate becomes even more critical given that an

increasing number of those who are newly diagnosed will be younger and will experience the possibility of long-term survival post-treatment. Contemporary rehabilitation efforts for those treated for HNCa increasingly demand that clinicians actively consider and address multiple issues. Beyond the obvious concerns specific to any type of cancer (i.e., the desire for curative treatment), clinical efforts that address physical, psychological, communicative, and social consequences secondary to HNCa treatment are essential components of all effective rehabilitation programs. Comprehensive HNCa rehabilitation ultimately seeks to restore multiple areas of functioning in the context of the disabling effects of treatment. In this regard, rehabilitation often focuses on restoration of function while reducing the impact of residual treatment-related deficits on the individual's overall functioning, well-being, quality of life (QOL), and ultimately, optimize survivorship. Regardless of the treatment method(s) pursued for HNCa (e.g., surgery, radiotherapy, chemoradiation, or combined methods), additional problems beyond those associated with voice, speech, eating and swallowing frequently exist. For example, post-treatment changes in areas such as breathing, maintaining nutrition, limitations in physical capacity because surgical reconstruction such as deficits in shoulder functioning, concerns specific to cosmetic alterations and associated disfigurement, and deficits in body image are common. Those treated for HNCa also may experience significant pain, depression, stigma and subsequent social isolation. Concerns of this type have led clinicians and researchers to describe HNCa as the most emotionally traumatic form of cancer. It is, therefore, essential that clinicians charged with the care and rehabilitation of those treated for HNCa actively seek to identify, acknowledge, and systematically address a range of physical, psychological, social, and communication problems. Efforts that systematically consider this range of post-treatment sequelae are seen as critical to any effort directed toward enhanced rehabilitation outcomes. Actively and

purposefully addressing post-treatment challenges may increase the likelihood of both short- and long-term rehabilitation success in this challenging clinical population. Current information suggests that successful clinical outcomes for those with HNCa are more likely to be realized when highly structured, yet flexible interdisciplinary programs of care are pursued. Yet contemporary educational resources that focus not only on management of voice, speech, eating, and swallowing disorders, but also address issues such as shoulder dysfunction due to neck dissection, the significant potential for cosmetic alterations can offer a much broader perspective on rehabilitation. Contemporary surgical treatment frequently involves reconstruction with extensive procedures that require donor sites that include both soft tissue from a variety of locations (e.g., forearm, thigh, etc.), as well as bone (e.g., the scapula). Collectively, resources that address these issues and many other concerns and the resultant social implications of HNCa and its treatment can serve to establish a comprehensive framework for clinical care. Consequently, providing a highly specialized and comprehensive educational resource specific to HNCa rehabilitation is currently needed. The proposed edited book is designed to address this void in a single authoritative resource that is also accessible to the clinical readership. Integral to this proposed book is information that guides clinical approaches to HNCa rehabilitation, in addition to offering emphasis on the direct impact of changes in voice, speech, and swallowing and the impact of such losses on outcomes. Finally, while several other published sources currently exist (see attached list), the emphasis of these books is directed either toward the identification and diagnosis of malignant disease, clinical and surgical pathology, associated efforts directed toward biomedical aspects of cancer and its treatment, or those with a focus on a single clinical problem or approach to rehabilitation. Therefore, the content of the proposed multi-chapter text centers on delivering a systematically structured, comprehensive, and clinically-oriented

presentation on a range of topics that will provide readers at a variety of levels with a strong, well-integrated, and empirically driven foundation to optimize the clinical care of those with HNCa. The primary audience for this textbook is undergraduate and graduate-level students in Speech-Language Pathology, as well as practitioners, especially hospital-based practitioners, in Speech-Language Pathology; other key audiences include junior and senior level otolaryngology residents and fellows, translational researchers in head and neck cancer, related medical specialists (e.g., radiation oncology), oncology nurses, and potentially other rehabilitation professionals such as occupational therapists, counseling psychologists, social workers, and rehabilitation counselors.

High Priest Timothy Leary, 2012-01-15 Timothy Leary, the visionary Harvard psychologist who became a guru of the 1960s counterculture, reentered as an icon of new edge cyberpunks. HIGH PRIEST chronicles 16 psychedelic trips taken in the days before LSD was made illegal. The trip guides or High Priests include Aldous Huxley, Gordon Wasson, William S. Burroughs, Godsdog, Allen Ginsberg, Ram Dass, Ralph Metzner, Willy (a junkie from New York City), Huston Smith, Frank Barron, and others. The scene was Millbrook, a mansion in Upstate New York, that was the Mecca of Psychedellia during the 1960s, and of the many luminaries of the period who made a pilgrimage there to trip with Leary and his group, The League for Spiritual Discovery. Each chapter includes an I-Ching reading, a chronicle of what happened during the trip, marginalia of comments, quotations, and illustrations. A fascinating window into an era. This edition includes a Foreword by Allen Ginsberg, an introduction by Timothy Leary about the intergenerational counterculture, and illustrations by Howard Hallis.

North Wakashan comparative root list John C. Rath,1980-01-01 This book contains a listing of approximately 2,650 roots from the various North Waskashan languages, namely Heiltsuk (Bella Bella and Klemtu), Oowekyala (Rivers Inlet), Haisla (Kitimat) and Kwakwaka (Alert Bay, Port Hardy, etc.). Each root is illustrated with lexical words from the language where it is represented, cognate words being brought together under a single entry and cross-referenced to each other as they occur at different points in the alphabetical order. The root list is preceded by concise phonologies of each language and an exposition of the techniques used to isolate roots in North Wakashan.

Hypoxia Robert C. Roach,Peter D. Wagner,Peter H. Hackett,2003-12-31 The International Hypoxia Symposium convenes biannually to bring together international experts from many fields to explore the state of the art in normal and pathophysiological responses to hypoxia. Representatives from five continents and 32 countries joined together in February 2003 for four days in the dramatic mountains of Banff, Alberta. As editors of the Proceedings of the International Hypoxia Symposia, we strive to maintain a 26 six year tradition of presenting a stimulating blend of clinical and basic science papers focused on hypoxia. Topics covered in 2003 include hibernation and hypoxia, hypoxia and fetal development and new advances in high altitude pathophysiology, oxidative stress and membrane damage, hypoxic regulation of blood flow, heat shock proteins in hypoxia, and future directions in hypoxia research. In 2003 we also had the privilege of honoring John W. Severinghaus as a friend, colleague, mentor and inspiration to many in the field. Tom Hornbein's personal tribute to John

Severinghaus is the first chapter in this volume, followed by an entertaining update of the history of the discovery of oxygen written by John Severinghaus.

Lake Kivu Jean-Pierre Descy,François Darchambeau,Martin Schmid,2012-05-25 In the heart of Africa, a unique lake attracts the attention of scientists since the beginning of the 20th century. At the foot of the Virunga volcano chain, Lake Kivu harbors a vast amount of dissolved carbon dioxide and methane, making this lake the most dangerous lake on Earth. But the lake furnishes also many goods and services for surrounding populations and may soon become the most important energy supplier in the area. At the beginning of gas exploitation, the time has come for gathering the large amount of scientific information acquired during past and present research on Lake Kivu. The eleven chapters cover many aspects of the physics, geochemistry and biology of the lake, with a particular focus on the unique physical and geochemical features of the water column and on the ecological functioning of the surface waters. The impacts of the introduced fish species and the potential impacts of methane exploitation are also summarized. This multi-disciplinary book may also be used as an introduction to the limnology and biogeochemistry of large tropical lakes, as it covers various aspects of the physics, geochemistry, biology and ecology of the African Great Rift lakes.

Drilling Engineering Problems and Solutions M. E. Hossain,M. R. Islam,2018-06-19 Petroleum and natural gas still remain the single biggest resource for energy on earth. Even as alternative and renewable sources are developed, petroleum and natural gas continue to be, by far, the most used and, if engineered properly, the most cost-effective and efficient, source of energy on the planet. Drilling engineering is one of the most important links in the energy chain, being, after all, the science of getting the resources out of the ground for processing. Without drilling engineering, there would be

no gasoline, jet fuel, and the myriad of other “have to have” products that people use all over the world every day. Following up on their previous books, also available from Wiley-Scrivener, the authors, two of the most well-respected, prolific, and progressive drilling engineers in the industry, offer this groundbreaking volume. They cover the basic tenets of drilling engineering, the most common problems that the drilling engineer faces day to day, and cutting-edge new technology and processes through their unique lens. Written to reflect the new, changing world that we live in, this fascinating new volume offers a treasure of knowledge for the veteran engineer, new hire, or student. This book is an excellent resource for petroleum engineering students, reservoir engineers, supervisors & managers, researchers and environmental engineers for planning every aspect of rig operations in the most sustainable, environmentally responsible manner, using the most up-to-date technological advancements in equipment and processes.
