CRACK99: The Takedown of a \$100 Million Chinese Software Pirate David Locke Hall, 2015-10-19

The utterly gripping story of the most outrageous case of cyber piracy prosecuted by the U.S. Department of Justice. A former U.S. Navy intelligence officer, David Locke Hall was a federal prosecutor when a bizarre-sounding website, CRACK99, came to his attention. It looked like Craigslist

on acid, but what it sold was anything but amateurish: thousands of high-tech software products used largely by the military, and for mere pennies on the dollar. Want to purchase satellite tracking software? No problem. Aerospace and aviation simulations? No problem. Communications systems designs? No problem. Software for Marine One, the presidential helicopter? No problem. With delivery times and customer service to rival the world's most successful e-tailers, anybody, anywhere—including rogue regimes, terrorists, and countries forbidden from doing business with the United States—had access to these goods for any purpose whatsoever. But who was behind CRACK99, and where were they? The Justice Department discouraged potentially costly, risky cases like this, preferring the low-hanging fruit that scored points from politicians and the public. But Hall and his colleagues were determined to find the culprit. They bought CRACK99's products for delivery in the United States, buying more and more to appeal to the budding entrepreneur in the man they identified as Xiang Li. After winning his confidence, they lured him to Saipan—a U.S. commonwealth territory where Hall's own father had stormed the beaches with the marines during World War II. There they set up an

audacious sting that culminated in Xiang Li's capture and imprisonment. The value of the goods offered by CRACK99? A cool \$100 million. An eye-opening look at cybercrime and its chilling consequences for national security, CRACK99 reads like a caper that resonates with every amazing detail.

50 Years of Integer Programming 1958–2008 Michael Jünger, Thomas M. Liebling, Denis Naddef, George L. Nemhauser, William R. Pulleyblank, Gerhard Reinelt, Giovanni Rinaldi, Laurence A. Wolsey, 2009-11-06 In 1958, Ralph E. Gomory transformed the field of integer programming when he published a paper that described a cutting-plane algorithm for pure integer programs and announced that the method could be refined to give a finite algorithm for integer programming. In 2008, to commemorate the anniversary of this seminal paper, a special workshop celebrating fifty years of integer programming was held in Aussois, France, as part of the 12th Combinatorial Optimization

Workshop. It contains reprints of key historical articles and written versions of survey lectures on six of the hottest topics in the field by distinguished members of the integer programming community. Useful for anyone in mathematics, computer science and operations research, this book exposes mathematical optimization, specifically integer programming and combinatorial optimization, to a broad audience.

Building the P-51 Mustang Michael O'Leary,2011-12 The P-51 Mustang holds a fascination unlike any other World War II aircraft, and countless books have been written about nearly every aspect of the Mustang's colorful history. However, the story of manufacturing the airplane itself is usually contained only in the opening chapters of these books. Now, for the first time, here is a major work devoted strictly to telling the story of how this legendary airplane was designed and built using rare original factory photographs, documents, and unique engineering information. The author uses 397 original photos culled from his personal archive of official North American and USAAF images, many of which have never before been seen in any publication whatsoever. This paperback book will provide a vital missing link in the saga of this famed World War II aircraft, and is sure to become a valued

addition to the libraries of P-51 modelers, historians, enthusiasts, and pilots in both the United States and England.

America's Children and the Environment U.s. Environmental Protection Agency,2017-05-31

America's Children and the Environment (ACE) is EPA's report presenting data on children's environmental health. ACE brings together information from a variety of sources to provide national indicators in the following areas: Environments and Contaminants, Biomonitoring, and Health. Environments and Contaminants indicators describe conditions in the environment, such as levels of air pollution. Biomonitoring indicators include contaminants measured in the bodies of children and women of child-bearing age, such as children's blood lead levels. Health indicators report the rates at which selected health outcomes occur among U.S. children, such as the annual percentage of children who currently have asthma. Accompanying each indicator is text discussing the relevance of the issue to children's environmental health and describing the data used in preparing the indicator. Wherever possible, the indicators are based on data sources that are updated in a consistent manner, so that indicator values may be compared over time.

History of Mathematical Programming J. K. Lenstra,A. H. G. Rinnooy Kan,A. Schrijver,1991 The historical span of mathematical programming, from its conception to its present flourishing state is

remarkably short. The 1940's and 1950's were an exciting period when there was a great deal of research activity, but the growth of the field during the 1960's and 1970's worldwide already appears to be of historical interest too, because much of the progress during that time has had an important influence on present-day research. In this volume some pioneers of the field, as well as some prominent younger colleagues, have put their personal recollections in writing. The contributions bear witness to a time of impressive scientific progress, in which the rich new field of mathematical programming was detected and brought up.
