Audio Technology, Music, and Media Julian

Ashbourn, 2020-12-14 This book provides a true A to Z of recorded sound, from its inception to the present day, outlining how technologies, techniques, and social attitudes have changed things, noting what is good and what is less good. The author starts by discussing the physics of sound generation and propagation. He then moves on to outline the history of recorded sound and early techniques and technologies, such as the rise of multi-channel tape recorders and their impact on recorded sound. He goes on to debate live sound versus recorded sound and why there is a difference, particularly with classical music. Other topics covered are the sound of real instruments and how that sound is produced and how to record it; microphone techniques and true stereo sound; digital workstations, sampling, and digital media; and music reproduction in the home and how it has changed. The author wraps up the book by discussing where we should be headed for both popular and classical music recording and reproduction, the role of the Audio Engineer in the 21st century, and a brief look at technology today and where it is headed. This book is ideal for anyone interested in recorded

sound. “[Julian Ashbourn] strives for perfection and reaches it through his recordings... His deep knowledge of both technology and music is extensive and it is with great pleasure that I see he is passing this on for the benefit of others. I have no doubt that this book will be highly valued by many in the music industry, as it will be by me.” -- Claudio Di Meo, Composer, Pianist and Principal Conductor of The Kensington Philharmonic Orchestra, The Hemel Symphony Orchestra and The Lumina Choir

Analysis of the MPEG-1 Layer III (MP3) Algorithm using MATLAB Jayaraman Thiagarajan, Andreas Spanias, 2011-11-11 The MPEG-1 Layer III (MP3) algorithm is one of the most successful audio formats for consumer audio storage and for transfer and playback of music on digital audio players. The MP3 compression standard along with the AAC (Advanced Audio Coding) algorithm are associated with the most successful music players of the last decade. This book describes the fundamentals and the MATLAB implementation details of the MP3 algorithm. Several of the tedious processes in MP3 are supported by demonstrations using MATLAB software. The book presents the theoretical concepts and algorithms used in the MP3 standard. The implementation details and simulations with MATLAB complement the theoretical principles. The extensive list of references enables the reader to perform a more detailed study on specific aspects of the algorithm and gain exposure to advancements in perceptual coding. Scalable Continuous Media Streaming Systems Jack

Lee, 2005-11-01 Continuous media streaming systems will shape the future of information infrastructure. The challenge is to design systems and networks capable of supporting millions of concurrent users. Key to this is the integration of fault-tolerant mechanisms to prevent individual component failures from disrupting systems operations. These are just some of the hurdles that need to be overcome before large-scale continuous media services such as video-on-demand can be deployed with maximum efficiency. The author places the subject in context, drawing together findings from the past decade of research whilst

examining the technology's present status and its future potential. The approach adopted is comprehensive, covering topics – notably the scalability and fault-tolerance issues - that previously have not been treated in depth. Provides an accessible introduction to the technology, presenting the basic principles for media streaming system design, focusing on the need for the correct and timely delivery of data. Explores the use of parallel server architectures to tackle the two key challenges of scalability and fault-tolerance. Investigates the use of network multicast streaming algorithms to further increase the scalability of very-large-scale media streaming systems. Illustrates all findings using real-world examples and case studies gleaned from cutting-edge worldwide research. Combining theory and practice, this book will appeal to industry specialists working in content distribution in general and continuous media streaming in particular. The introductory materials and basic building blocks complemented by amply illustrated, more advanced coverage provide essential reading for senior undergraduates, postgraduates and researchers in these fields.

Unruly Souls Kristin M. Peterson, 2022-07-15 Amid growing digital activism to address gender-based violence, institutional racism, and homophobia in U.S. society, Unruly Souls explores the intersectional feminist activism among young people within Islam and Evangelical Christianity. These religious misfits—marginalized from traditional religious spaces due to their sexuality, gender, or race—employ the creative tactics of digital media in their work to seek justice and to display their fundamental equality in the eyes of God. Through an analysis of various digital projects from hip-hop music videos and Instagram accounts to Twitter hashtags and podcasts, Kristin Peterson argues that the hybrid, flexible, playful, and sensory nature of digital media facilitate intersectional feminist activism within and beyond religious communities. Drawing on work from queer theory, decolonial theory, and Black feminist theory, this study

explores how those who have been marginalized are able to effectively deploy their disregarded status along with digital media tactics to cultivate empathetic communities for those recovering from religious trauma.

Minorities and Media John Budarick,Gil-Soo Han,2017-03-03

This book examines the relationships between ethnic and Indigenous minorities and the media in Australia. The book places the voices of minorities at its centre, moving beyond a study of only representation and engaging with minority media producers, industries and audiences. Drawing on a diverse range of studies – from the Indigenous media environment to grassroots production by young refugees – the chapters within engage with the full range of media experiences and practices of marginalized Australians. Importantly, the book expands beyond the victimization of Indigenous and ethnic minorities at the hands of mainstream media, and also analyses the empowerment of communities who use media to respond to, challenge and negotiate social inequalities.

Media and the American Child George Comstock,Erica

Scharrer,2010-07-27 Media and the American Child summarizes the research on all forms of media on children, looking at how much time they spend with media everyday, television

programming and its impact on children, how advertising has changed to appeal directly to children and the effects on children and the consumer behavior of parents, the relationship between media use and scholastic achievement, the influence of violence in media on anti-social behavior, and the role of media in influencing attitudes on body image, sex and work roles, fashion, & lifestyle. The average American child, aged 2-17, watches 25 hours of TV per week, plays 1 hr per day of video or computer games, and spends an additional 36 min per day on the internet. 19% of children watch more than 35 hrs per week of TV. This in the face of research that shows TV watching beyond 10 hours per week decreases scholastic performance. In 1991, George Comstock published Television and the American Child, which immediately became THE standard reference for the research community of the effects of television on children. Since then, interest in the topic has mushroomed, as the availability and access of media to children has become more widespread and occurs earlier in their lifetimes. No longer restricted to television, media impacts children through the internet, computer and video games, as well as television and the movies. There are videos designed for infants, claiming to improve cognitive development, television programs aimed for younger and younger children-even pre-literates, computer programs aimed for toddlers, and increasingly graphic, interactive violent computer games.

Presents the most recent research on the media use of young people Investigates the content of children's media and addresses areas of great concern including violence, sexual behavior, and commercialization Discusses policy making in the area of children and the media Focuses on experiences unique to children and adolescents

Radio Audiences and Participation in the Age of Network

Society Tiziano Bonini, Belén Monclús, 2014-12-05 This book maps, describes and further explores all contemporary forms of interaction between radio and its public, with a specific focus on those forms of content co-creation that link producers and listeners. Each essay will analyze one or more case studies, piecing together a map of emerging co-creation practices in contemporary radio. Contributors describe the rise of a new class of radio listeners: the networked ones. Networked audiences are made up of listeners that are not only able to produce written and audio content for radio and co-create along with the radio producers (even definitively bypassing the central hub of the radio station, by making podcasts), but that also produce social data, calling for an alternative rating system, which is less focused on attention and more on other sources, such as engagement, sentiment, affection, reputation, and influence. What are the economic and political consequences of this paradigm shift? How are radio audiences perceived by radio producers in this new radioscape? What's the true value of radio

audiences in this new frame? How do radio audiences take part in the radio flow in this age? Are audiences' interactions and co-creations overrated or underrated by radio producers? To what extent listeners' generated content can be considered a form of participation or free labour exploitation? What's the role of community radio in this new context? These are some of the many issues that this book aims to explore. Podcasting in a Platform Age John L. Sullivan, 2024-01-25

Podcasting in a Platform Age explores the transition underway in podcasting by considering how the influx of legacy and new media interest in the medium is injecting professional and corporate logics into what had been largely an amateur media form. Many of the most high-profile podcasts today, however, are produced by highly-skilled media professionals, some of whom are employees of media corporations. Legacy radio and new media platform giants like Google, Apple, Amazon, and Spotify are also making big (and expensive) moves in the medium by acquiring

content producers and hosting platforms. This book focuses on three major aspects of this transformation: formalization, professionalization, and monetization. Through a close read of online and press discourse, analysis of podcasts themselves, participant observations at podcast trade shows and conventions, and interviews with industry professionals and individual podcasters, John Sullivan outlines how the efforts of industry players to transform podcasting into a profitable medium are beginning to challenge the very definition of podcasting itself.
