 DIY Media Michele Knobel,Colin Lankshear,2010 Schools remain notorious for co-opting digital technologies to «business as usual» approaches to teaching new literacies. DIY Media addresses this issue head-on, and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school, and whose educational potential is not yet being tapped to any significant degree in classrooms. This book is very much concerned with engaging students in do-it-yourself digitally mediated meaning-making practices. As such, it is organized around three broad areas of digital media: moving media, still media, and audio media. Specific DIY media practices addressed in the chapters include machinima, anime music videos, digital photography, podcasting, and music remixing. Each chapter opens with an overview of a specific DIY media practice, includes a practical how-to tutorial section, and closes with suggested applications for classroom settings. This collection will appeal not only to educators, but to anyone invested in better understanding - and perhaps

participating in - the significant shift towards everyday people producing their own digital media.

This relationship, the book argues, is exemplified by the work of Trevor Horn, who is widely acknowledged as the most important, innovative and successful British pop record producer of the early 1980s. In the first part of the book, Timothy Warner presents a definition of pop as distinct from rock music, and goes on to consider the ways technological developments, such as the transition from analogue to digital, transform working practices and, as a result, impact on the creative process of producing pop.
