Multimedia Tools and Applications Borko Furht, 2012-12-06 Multimedia computing has emerged in the last few years as a major area of research. Multimedia computer systems have opened a wide range of applications by combining a variety of information sources, such as voice, graphics, animation, images, audio, and full-motion video. Looking at the big picture, multimedia can be viewed as the merging of three industries: the computer, communications, and broadcasting industries. Research and development efforts in multimedia computing can be divided into two areas. As the first area of research, much effort has been centered on the stand-alone multimedia workstation and associated software systems and tools, such as music composition, computer-aided education and training, and interactive video. However, the combination of multimedia computing with distributed systems offers even greater potential. New applications based on distributed multimedia systems include multimedia information systems, collaborative and videoconferencing systems, on-demand multimedia services, and distance learning. Multimedia Tools and Applications is one of two volumes published by Kluwer, both of which provide a broad introduction to this fast moving area. This book covers selected tools applied in multimedia systems and key multimedia applications. Topics presented include multimedia application development techniques, techniques for content-based manipulation of image databases, techniques for selection and dissemination of digital video, and tools for digital video segmentation. Selected key applications described in the book include multimedia news services, multimedia courseware and training, interactive television systems, digital video libraries, multimedia messaging systems, and interactive multimedia publishing systems. The second book, Multimedia Systems and Techniques, covers fundamental concepts and techniques used in multimedia systems. The topics include multimedia objects and related models, multimedia compression techniques and standards, multimedia interfaces, multimedia storage techniques, multimedia communication and networking, multimedia synchronization techniques, multimedia information systems, scheduling in multimedia systems, and video indexing and retrieval techniques. Multimedia Tools and Applications, along with its companion volume, is intended for anyone involved in multimedia system design and applications and can be used as a textbook for advanced courses on multimedia.

Introduction to Multimedia Systems Gaurav Bhatnagar, Shikha Mehta, Sugata Mitra, 2002 Introduction to Multimedia Systems is designed to be a general introduction to the broad field of multimedia... more specifically digital interactive multimedia. The editors have included topics such as the principles of multiple and media, including sound, two-dimensional and three-dimensional graphics, animation, and text. All of these elements are stitched together by the programmer, or multimedia designer, based on the conceptualization of the designer. In order to take full advantage of the potential for a wide array of multimedia applications it is important to have a broad understanding of the principles of various media. The person preparing a multimedia package, which may include such media as sound, computer graphics, and software, will most likely have a strong background in only one or perhaps none of the media to be used. Introduction to Multimedia Systems has been developed to be the first place to turn, both as an introductory textbook or as a professional reference for anyone diving into multimedia preparation. Multimedia is first and foremost a medium of communication. In order to take advantage of the nearly unlimited potential provided by digital environments a full survey of multimedia capabilities is covered in this book. Website Feature: Learning by doing! The editors currently use the book in combination with a wide array of sample software and weblinks for students to learn how to build by example. Each part of the book will have a direct link to a publicly accessible website that will maintain these available software tools. The weblinks will be updated as software versions advance, and most of the software involves demo or scaled down versions of commercially available multimedia design software/editing tools. This is a carefully written and edited book specifically designed to be a general introduction to the broad field of multimedia Covers all the general topics of multimedia namely the principles of 'multiple' and 'media', including sound, 2D and 3D graphics, animation and text

Multimedia/Hypermedia in Open Distributed Environments Wolfgang Herzner, Frank Kappe, 2012-12-06 Over the last few years, multimedia hardware and applications have become widely available in the personal computer and workstation environments, and multimedia is rapidly becoming an integral part of stand-alone, single-user systems. In contrast, the problems encountered when moving to open, distributed environments are only just beginning to be identified. Examples are the transmission of dynamic data (video, sound) over large distances and cooperative work. Following on from two successful workshops on multimedia, EG-MM '94 concentrates on topics related to multimedia/hypermedia in open, distributed environments. The goal of this symposium was not only to give a comprehensive overview of the current state of research, development, and standardisation in the field, but also to provide an opportunity for live demonstrations to experience directly the presented results. The symposium program consists of two invited keynote speeches, eight technical sessions, one tutorial, and one demonstration session. A workshop following immediately after the symposium provides an opportunity for in-depth discussions of open problems among experts. It is intended to fill a

gap often experienced at larger meetings and conferences: the lack of time to discuss in detail issues raised during the event, such as the characteristics of different approaches to a certain problem. It is intended that the results of the workshop be published as a Eurographics Technical Report.
