Garr Reynolds

Presentation Zen Garr Reynolds, 2009-04-15 FOREWORD BY GUY KAWASAKI Presentation designer and internationally acclaimed communications expert Garr Reynolds, creator of the most popular Web site on presentation design and delivery on the Net – presentationzen.com – shares his experience in a provocative mix of illumination, inspiration, education, and guidance that will change the way you think about making presentations with PowerPoint or Keynote. Presentation Zen challenges the conventional wisdom of making slide presentations in today's world and encourages you to think differently and more creatively about the preparation, design, and delivery of your presentations. Garr shares lessons and perspectives that draw upon practical advice from the fields of communication and business. Combining solid principles of design with the tenets of Zen simplicity, this book will help you along the path to simpler, more effective presentations.

Creating Multimedia Presentations Tamra B. Orr, 2009-08-15 A must-have how-to guide to the vast □ and vastly complicated □ world of multimedia research and presentation. This book accessibly guides the young reader through the process of searching for, obtaining, storing, organizing, arranging, and presenting multimedia sources of information □ images, audio, and video □ for school projects. It also imparts essential understanding about using copyrighted materials and how to safely cite sources. The entire process of synthesizing multimedia materials into a smooth, effective presentation is accessibly explored. Students learn typical teacher expectations and methods of evaluation for such a project. The book includes useful web sites and information about online tutorials and an extensive reading list and collection of resources.

brings together in one place important contributions and up-to-date research results in this fast moving area. Digital Libraries and Multimedia serves as an excellent reference, providing insight into some of the most challenging research issues in the field.

Adaptive Hypermedia and Adaptive Web-Based Systems Wolfgang Nejdl, Paul De Bra, 2004-12-02

On behalf of the AH 2004 Program Committee, we were pleased to welcome attendees to Eindhoven for the 3rd International Conference on Adaptive Hypermedia and Adaptive Web-Based Systems. Similar to previous years, the number of research groups involved in research and innovative applications of personalization and adaptation functionalities has continued to grow, resulting in a further increase of 33% in the number of papers submitted to the conference, compared to the previous conference. From the 138 submissions we received, the program committee, in a rigorous review process, accepted 27 submissions (i.e., 20%) as full papers and 18 (i.e., 13%) as short papers. The large number of papers submitted generated a tremendous amount of work for the program committee members and the external reviewers, and we are immensely grateful for the effort they put into the process of selecting the very best papers. Together with three invited talks (by Emile Aarts, Philips Research, Candy Sidner, Mitsubishi Research, and Eric Horvitz, Microsoft Research), the AH 2004 papers provide an excellent view on the successful approaches for innovative personalization and adaptation functionalities in a variety of areas, including eLearning, eCommerce, mobile tourist guides and many more. They also show the integration of personalization functionalities being employed in Web environments, in ambient intelligence and intelligent agent contexts, and building upon adaptive hypermedia and Semantic Web technologies, Web search, Web services, social and peer-to-peer networks, and recommender systems, among others.

Foundations of Computing Pradeep K. Sinha, Priti Sinha, 2022-12-12

DESCRIPTION If you wish to have a bright future in any profession today, you cannot ignore having sound foundation in Information Technology (IT). Hence, you cannot ignore to have this book because it provides comprehensive coverage of all important topics in IT. Foundations of Computing is designed to introduce through a single book the important concepts of the Foundation Courses in Computer Science (CS), Computer Applications (CA), and Information Technology (IT) programs taught at undergraduate and postgraduate levels. **WHAT YOU WILL LEARN** □ Characteristics, Evolution and Classification of computers. □ Binary, Octal and Hexadecimal Number systems, Computer codes and Binary arithmetic. □ Boolean algebra, Logic gates, Flip-Flops, and Design of Combinational and Sequential Circuits. □

Computer architecture, including design of CPU, Memory, Secondary storage, and I/O devices. □ Computer software, how to acquire software, and the commonly used tools and techniques for planning, developing, implementing, and operating software systems. □ Programming languages, Operating systems, Communication technologies, Computer networks, Multimedia computing, and Information security. □ Database and Data Science technologies. □ The Internet, Internet of Things (IoT), E-Governance, Geo- informatics, Medical Informatics, Bioinformatics, and many more. WHO THIS BOOK IS FOR □ Students of CS, CA and IT will find the book suitable for use as a textbook or reference book. □ Professionals will find it suitable for use as a reference book for topics in CS, CA and IT. □ Applicants preparing for various entrance tests and competitive examinations will find it suitable for clearing their concepts of CS, CA and IT. □ Anyone else interested in developing a clear understanding of the important concepts of various topics in CS, CA and IT will also find this book useful.

Database and Data Communication Network Systems, Three-Volume Set Cornelius T.

Leondes, 2002-07-09 Database and Data Communication Network Systems examines the utilization of the Internet and Local Area/Wide Area Networks in all areas of human endeavor. This three-volume set covers, among other topics, database systems, data compression, database architecture, data acquisition, asynchronous transfer mode (ATM) and the practical application of these technologies. The international collection of contributors was culled from exhaustive research of over 100,000 related archival and technical journals. This reference will be indispensable to engineering and computer science libraries, research libraries, and telecommunications, networking, and computer companies. It covers a diverse array of topics, including: * Techniques in emerging database system architectures * Techniques and applications in data mining * Object-oriented database systems * Data acquisition on the WWW during heavy client/server traffic periods * Information exploration on the WWW * Education and training in multimedia database systems * Data structure techniques in rapid prototyping and manufacturing * Wireless ATM in data networks for mobile systems * Applications in corporate finance

* Scientific data visualization * Data compression and information retrieval * Techniques in medical systems, intensive care units

Applications and Science in Soft Computing Ahmad Lotfi, Jonathan M. Garibaldi, 2013-06-29 Soft computing techniques have reached a significant level of recognition and acceptance from both the academic and industrial communities. The papers collected in this volume illustrate the depth of the current theoretical research trends and the breadth of the application areas in which soft computing methods are making contributions. This volume consists of forty six selected papers presented at the Fourth International Conference on Recent Advances in Soft Computing, which was held in Nottingham, United Kingdom on 12 and 13 December 2002 at Nottingham Trent University. This volume is organized in five parts. The first four parts address mainly the fundamental and theoretical advances in soft computing, namely Artificial Neural Networks, Evolutionary Computing, Fuzzy Systems and Hybrid Systems. The fifth part of this volume presents papers that deal with practical issues and industrial applications of soft computing techniques. We would like to express our sincere gratitude to all the authors who submitted contributions for inclusion. We are also indebted to Janusz Kacprzyk for his services related to this volume. We hope you find the volume an interesting reflection of current theoretical and application based soft computing research.

Distributed Multimedia Database Technologies Supported by MPEG-7 and MPEG-21 Harald Kosch, 2003-11-24 A multimedia system needs a mechanism to communicate with its environment, the Internet, clients, and applications. MPEG-7 provides a standard metadata format for global communication, but lacks the framework to let the various players in a system interact. MPEG-21 closes this gap by establishing an infrastructure for a distributed multimedia frame

Multimedia Software Engineering Shi-Kuo Chang, 2012-12-06 Multimedia has two fundamental characteristics that can be expressed by the following formula: Multimedia = Multiple Media + Hypermedia. How can software engineering take advantage of these two characteristics? Will these two characteristics pose problems in multimedia systems design? These are some of the issues to be explored in this book. The first two chapters will be of interest to managers, software engineers, programmers, and people interested in gaining an overall understanding of multimedia software engineering. The next six chapters present multimedia software engineering according to the conceptual framework introduced in Chapter One. This is of particular use to practitioners, system developers, multimedia application designers, programmers, and people interested in prototyping

multimedia applications. The next three chapters are more research-oriented and are mainly intended for researchers working on the specification, modeling, and analysis of distributed multimedia systems, but will also be relevant to scientists, researchers, and software engineers interested in the systems and theoretical aspects of multimedia software engineering. Multimedia Software Engineering can be used as a textbook in a graduate course on multimedia software engineering or in an undergraduate course on software design where the emphasis is on multimedia applications. It is especially suitable for a project-oriented course.

The Really Useful ICT Book Jill Jesson,Graham Peacock,2012-10-12 The Really Useful ICT Book is a practical and easy-to-use guide to give you all the confidence you need to use ICT really effectively inside and outside the primary classroom. It makes clear how ICT can be taught as a standalone subject, and how it can be used easily and imaginatively to enhance teaching other subjects. Jam-packed with ideas and templates to save you time, this friendly handbook offers an introduction to: using ICT inside the classroom – including interactive whiteboards, computer suites, VLEs and e-safety using ICT outside the classroom – including word processors, laptops, data loggers and digital cameras when and how to use a wide range of software and hardware – from spreadsheet packages through to digital photography, e-portfolios and software simulation using ICT in all subject areas practical suggestions for using ICT in cross-curricular topics using ICT to develop teacher and pupil creativity using ICT for assessment and in your professional role. With an emphasis on developing children's creativity and on progression from Key Stage 1 to Key Stage 2, The Really Useful ICT Book is a comprehensive compendium of advice and inspiration for all training, newly qualified and experienced teachers, as well as those in support roles in primary schools.

Design research in software development: Constructing and Linking Research Questions, Objectives, Methods and Outcomes (UUM Press) Norshuhada Shiratuddin ,Shahizan

Hassan,2010-01-01 Design research is grounded on the iterative Triangulation Methodology (ITM), where theoretical, development and empirical research approaches are triangulated to accomplish the design research objectives. Constructing and associating research gaps, questions, objectives, methods and outcomes are imperative in a research. However, not linking all these and choosing the wrong and poorly designed methods are common especially among inexperienced researchers and students. Therefore, researchers should practice strategies in identifying the right methods to collect data or perform experiment that can meet the predefined objectives and determined research problems. This book is aimed at providing some of the likely strategies. It contains personalized strategies and examples that are useful for starting a design research in any field particularly in software and application development. The examples described are real studies that we conducted together with our research team members.

Towards a Global 3G System Ramjee Prasad,2001 Europe's leading experts from industry and academia present the results of the research into advanced mobile technologies and services performed within the scope of the ACTS R& D program in two new book volumes. Invaluable for industry professionals and researchers, the state-of-the-art in European R& D into wireless technologies is detailed in these two works.
