*Adaptive Hypermedia and Adaptive Web-Based Systems* Wolfgang Nejdl, Paul De Bra, 2004-12-02

On behalf of the AH 2004 Program Committee, we were pleased to welcome attendees to Eindhoven for the 3rd International Conference on Adaptive Hypermedia and Adaptive Web-Based Systems. Similar to previous years, the number of research groups involved in research and innovative applications of personalization and adaptation functionalities has continued to grow, resulting in a further increase of 33% in the number of papers submitted to the conference, compared to the previous conference. From the 138 submissions we received, the program committee, in a rigorous review process, accepted 27 submissions (i.e., 20%) as full papers and 18 (i.e., 13%) as short papers. The large number of papers submitted generated a tremendous amount of work for the program committee members and the external reviewers, and we are immensely grateful for the effort they put into the process of selecting the very best papers. Together with three invited talks (by Emile Aarts,

Philips Research, Candy Sidner, Mitsubishi Research, and Eric Horvitz, Microsoft Research), the AH 2004 - pers provide an excellent view on the successful approaches for innovative person- ization and adaptation functionalities in a variety of areas, including eLearning, eC- merce, mobile tourist guides and many more. They also show the integration of pers- alization functionalities being employed in Web environments, in ambient intelligence and intelligent agent contexts, and building upon adaptive hypermedia and Semantic Web technologies, Web search, Web services, social and peer-to-peer networks, and recommender systems, among others.

Database and Data Communication Network Systems, Three-Volume Set Cornelius T.

Leondes, 2002-07-09 Database and Data Communication Network Systems examines the utilization of the Internet and Local Area/Wide Area Networks in all areas of human endeavor. This three-volume set covers, among other topics, database systems, data compression, database architecture, data

acquisition, asynchronous transfer mode (ATM) and the practical application of these technologies. The international collection of contributors was culled from exhaustive research of over 100,000 related archival and technical journals. This reference will be indispensable to engineering and computer science libraries, research libraries, and telecommunications, networking, and computer companies. It covers a diverse array of topics, including: \* Techniques in emerging database system architectures \* Techniques and applications in data mining \* Object-oriented database systems \* Data acquisition on the WWW during heavy client/server traffic periods \* Information exploration on the WWW \* Education and training in multimedia database systems \* Data structure techniques in rapid prototyping and manufacturing \* Wireless ATM in data networks for mobile systems \* Applications in corporate finance \* Scientific data visualization \* Data compression and information retrieval \* Techniques in medical systems, intensive care units

*Applications and Science in Soft Computing* Ahmad Lotfi, Jonathan M. Garibaldi, 2013-06-29 Soft computing techniques have reached a significant level of recognition and - ceptance from both the

academic and industrial communities. The papers collected in this volume illustrate the depth of the current theoretical research trends and the breadth of the application areas in which soft computing methods are making contributions. This volume consists of forty six selected papers presented at the Fourth International Conference on Recent Advances in Soft Computing, which was held in Nottingham, United Kingdom on 12 and 13 December 2002 at Nottingham Trent University. This volume is organized in five parts. The first four parts address mainly the fundamental and theoretical advances in soft computing, namely Artificial Neural Networks, Evolutionary Computing, Fuzzy Systems and Hybrid Systems. The fifth part of this volume presents papers that deal with practical issues and industrial applications of soft computing techniques. We would like to express our sincere gratitude to all the authors who submitted contributions for inclusion. We are also indebted to Janusz Kacprzyk for his services related to this volume. We hope you find the volume an interesting reflection of current theoretical and application based soft computing research.

*Distributed Multimedia Database Technologies Supported by MPEG-7 and MPEG-21* Harald

Kosch,2003-11-24 A multimedia system needs a mechanism to communicate with its environment, the Internet, clients, and applications. MPEG-7 provides a standard metadata format for global communication, but lacks the framework to let the various players in a system interact. MPEG-21 closes this gap by establishing an infrastructure for a distributed multimedia frame

*Multimedia Software Engineering* Shi-Kuo Chang,2012-12-06 Multimedia has two fundamental characteristics that can be expressed by the following formula: Multimedia = Multiple Media + Hypermedia. How can software engineering take advantage of these two characteristics? Will these two characteristics pose problems in multimedia systems design? These are some of the issues to be explored in this book. The first two chapters will be of interest to managers, software engineers, programmers, and people interested in gaining an overall understanding of multimedia software engineering. The next six chapters present multimedia software engineering according to the conceptual framework introduced in Chapter One. This is of particular use to practitioners, system

developers, multimedia application designers, programmers, and people interested in prototyping multimedia applications. The next three chapters are more research-oriented and are mainly intended for researchers working on the specification, modeling, and analysis of distributed multimedia systems, but will also be relevant to scientists, researchers, and software engineers interested in the systems and theoretical aspects of multimedia software engineering. Multimedia Software Engineering can be used as a textbook in a graduate course on multimedia software engineering or in an undergraduate course on software design where the emphasis is on multimedia applications. It is especially suitable for a project-oriented course.

*Design research in software development: Constructing and Linking Research Questions, Objectives, Methods and Outcomes (UUM Press)* Norshuhada Shiratuddin ,Shahizan Hassan,2010-01-01 Design research is grounded on the iterative Triangulation Methodology (ITM), where theoretical, development and empirical research approaches are triangulated to accomplish the design research objectives. Constructing and associating research gaps, questions, objectives, methods and outcomes are imperative in a research. However, not linking all these and choosing the wrong and poorly designed methods are common especially among inexperienced researchers and students. Therefore, researchers should practice strategies in identifying the right methods to collect data or perform experiment that can meet the predefined objectives and determined research

problems. This book is aimed at providing some of the likely strategies. It contains personalized strategies and examples that are useful for starting a design research in any field particularly in software and application development. The examples described are real studies that we conducted together with our research team members.
