<u>Researching Audio Description</u> Anna
Matamala,Pilar Orero,2016-06-21 Audio description
is one of the many services available to guarantee
accessibility to audiovisual media. It describes
and narrates images and sounds and resulting audio
is then mixed with the original soundtrack. Audio
description is a complex process that touches
production, distribution and reception.
Researching Audio Description: New
Approachesgathers academic information and data
from the many existing research projects,
practices, and training across the world. The book
has a telescopic approach, from two introductory
chapters where accessibility in general is
contextualised as a human right, and the basic
concepts of disability and impairment are
explored. Research on specific features for audio
description script drafting are focused in the
second part of the book, with a view to revising
existing funded projects and their outcomes. The
book offers a wealth of information on both the
practical and philosophical, from different
approaches in perception and cognition, and
different research methodologies. Project
information contained in the contributions
identifies trends in current research-funded
studies which will be valuable as a pointer
towards future proposals. The book shows the
dynamic state of audio description practice,
training and research, while contributing towards
the growing critical mass needed in building the
field of accessibility studies.
  Audio Signal Processing for Next-Generation

   The Visual Made Verbal Joel Snyder,2020-10-25 Verbal descriptions of life have been around for centuries, but the digital age has made access to those descriptions even more important. Dr. Joel Snyder, an audio description pioneer, has created a book and website offering the first overview of the field, including its history, application to a range of genres, description of training techniques, and list of resources. Audio description brings the visual world to life, making theater productions, television shows, films, visual art and events accessible to people who are blind or have low vision. Describers employ succinct, vivid, imaginative words to convey visual images those with sight take for granted. Although countries worldwide have taken up the cause, the United States has fallen short

on research and institutions to study the field. Dr. Snyder's book helps fill in some of those gaps. "For decades, Joel Snyder has combined his astonishing command of language with his keen attention to detail to create word pictures that stir the mind's eye, especially for patrons of the arts whose physical eyes cannot see. [...] His book has been long-awaited, and no doubt will become the standard for prospective audio describers around the world." -Kelsey Marshall, Founding Director of Accessibility, The John F. Kennedy Center for the Performing Arts, Washington, DC Dr. Joel Snyder is known internationally as one of the world's first "audio describers," a pioneer in the field of audio description, making theater events, museum exhibitions, and media accessible to people who are blind or have low vision. Since 1981, he has introduced audio description techniques in 36 states and D.C. and in 35 countries. He holds a PhD in accessibility audio description from the Universitat Autònoma de Barcelona. Dr. Snyder's company, Audio Description Associates, LLC (www.audiodescribe.com) uses audio description to enhance a wide range of arts projects including video and film, museum exhibitions, and live events. As Director of Described Media for the National Captioning Institute, he supervised the production of descriptions for Sesame Street and dozens of feature films and nationally broadcast television; his descriptions can be heard at Smithsonian Institution exhibits, the Getty Museum, the Albright-Knox Gallery, and throughout the country at National Park Service visitor

centers. As Director of the American Council of the Blind's Audio Description Project (www.acb.org/adp), Dr. Snyder voiced description for network coverage of President Obama's inauguration in 2009 and 2013, and recently produced the first-ever audio-described tour of The White House. The ADP website is the nation's principal provider of information and resources on audio description.

   Computer Speech Manfred R. Schroeder,2013-06-29 New material treats such contemporary subjects as automatic speech recognition and speaker verification for banking by computer and privileged (medical, military, diplomatic) information and control access. The book also focuses on speech and audio compression for mobile communication and the Internet. The importance of subjective quality criteria is stressed. The book also contains introductions to human monaural and binaural hearing, and the basic concepts of signal analysis. Beyond speech processing, this revised and extended new edition of Computer Speech gives an overview of natural language technology and presents the nuts and bolts of state-of-the-art speech dialogue systems.

   Multimedia Information Retrieval Peter Schäuble,1997-04-30 Multimedia Information Retrieval: Content-Based Information Retrieval

from Large Text and Audio Databases addresses the
future need for sophisticated search techniques
that will be required to find relevant information
in large digital data repositories, such as
digital libraries and other multimedia databases.
Because of the dramatically increasing amount of
multimedia data available, there is a growing need
for new search techniques that provide not only
fewer bits, but also the most relevant bits, to
those searching for multimedia digital data. This
book serves to bridge the gap between classic
ranking of text documents and modern information
retrieval where composite multimedia documents are
searched for relevant information. Multimedia
Information Retrieval: Content-Based Information
Retrieval from Large Text and Audio Databases
begins to pave the way for speech retrieval; only
recently has the search for information in speech
recordings become feasible. This book provides the
necessary introduction to speech recognition while
discussing probabilistic retrieval and text
retrieval, key topics in classic information
retrieval. The book then discusses speech
retrieval, which is even more challenging than
retrieving text documents because word boundaries
are difficult to detect, and recognition errors
affect the retrieval effectiveness. This book also
addresses the problem of integrating information
retrieval and database functions, since there is
an increasing need for retrieving information from
frequently changing data collections which are
organized and managed by a database system.
Multimedia Information Retrieval: Content-Based
Information Retrieval from Large Text and Audio

Databases serves as an excellent reference source and may be used as a text for advanced courses on the topic.

  The Routledge Handbook of Audio Description Christopher Taylor,Elisa Perego,2022 This Handbook provides a comprehensive overview of the expanding field of Audio Description, the practice of rendering the visual elements of a multimodal product such as a film, painting, or live performance in the spoken mode, for the benefit principally of the blind and visually impaired community. This volume brings together scholars, researchers, practitioners and service providers such as broadcasters from all over the world to cover as thoroughly as possible all the theoretical and practical aspects of this discipline. In 38 chapters, the expert authors chart how the discipline has become established both as an important professional service and as a valid academic subject, how it has evolved and how it has come to play such an important role in media accessibility. From the early history of the subject, through to the challenges represented by ever-changing technology, the Handbook covers the approaches and methodologies adopted to analyse the 'multimodal' text, in the constant search for the optimum selection of the elements to describe. This is the essential guide and companion for advanced students, researchers and Audio Description professionals within the more general spheres of translation studies and media accessibility--
