Researching Audio Description Anna Matamala, Pilar Orero, 2016-06-21 Audio description is one of the many services available to guarantee accessibility to audiovisual media. It describes and narrates images and sounds and resulting audio is then mixed with the original soundtrack. Audio description is a complex process that touches production, distribution and reception. *Researching Audio Description: New Approaches* gathers academic information and data from the many existing research projects, practices, and training across the world. The book has a telescopic approach, from two introductory chapters where accessibility in general is contextualised as a human right, and the basic concepts of disability and impairment are explored. Research on specific features for audio description script drafting are focused in the second part of the book, with a view to revising existing funded projects and their outcomes. The book offers a wealth of information on both the practical and philosophical, from different approaches in perception and cognition, and different research methodologies. Project information contained in the contributions identifies trends in current research-funded studies which will be valuable as a pointer towards future proposals. The book shows the dynamic state of audio description practice, training and research, while contributing towards the growing critical mass needed in building the field of accessibility studies.

Audio Signal Processing for Next-Generation Multimedia Communication Systems Yiteng (Arden) Huang, Jacob Benesty, 2007-05-08 *Audio Signal Processing for Next-Generation Multimedia Communication Systems* presents cutting-edge digital signal processing theory and implementation techniques for problems including speech acquisition and enhancement using microphone arrays, new adaptive filtering algorithms, multichannel acoustic echo cancellation, sound source tracking and separation, audio coding, and realistic sound stage reproduction. This book's focus is almost exclusively on the processing, transmission, and presentation of audio and acoustic signals in multimedia communications for telecollaboration where immersive acoustics will play a great role in the near future.

The Visual Made Verbal Joel Snyder, 2020-10-25 Verbal descriptions of life have been around for centuries, but the digital age has made access to those descriptions even more important. Dr. Joel Snyder, an audio description pioneer, has created a book and website offering the first overview of the field, including its history, application to a range of genres, description of training techniques, and list of resources. Audio description brings the visual world to life, making theater productions, television shows, films, visual art and events accessible to people who are blind or have low vision. Describers

employ succinct, vivid, imaginative words to convey visual images those with sight take for granted. Although countries worldwide have taken up the cause, the United States has fallen short on research and institutions to study the field. Dr. Snyder's book helps fill in some of those gaps. "For decades, Joel Snyder has combined his astonishing command of language with his keen attention to detail to create word pictures that stir the mind's eye, especially for patrons of the arts whose physical eyes cannot see. [...] His book has been long-awaited, and no doubt will become the standard for prospective audio describers around the world." -Kelsey Marshall, Founding Director of Accessibility, The John F. Kennedy Center for the Performing Arts, Washington, DC Dr. Joel Snyder is known internationally as one of the world's first "audio describers," a pioneer in the field of audio description, making theater events, museum exhibitions, and media accessible to people who are blind or have low vision. Since 1981, he has introduced audio description techniques in 36 states and D.C. and in 35 countries. He holds a PhD in accessibility audio description from the Universitat Autònoma de Barcelona. Dr. Snyder's company, Audio Description Associates, LLC (www.audiodescribe.com) uses audio description to enhance a wide range of arts projects including video and film, museum exhibitions, and live events. As Director of Described Media for the National Captioning Institute, he supervised the production of descriptions for Sesame Street and dozens of feature films and nationally broadcast television; his descriptions can be heard at Smithsonian Institution exhibits, the Getty Museum, the Albright-Knox Gallery, and throughout the country at National Park Service visitor centers. As Director of the American Council of the Blind's Audio Description Project (www.acb.org/adp), Dr. Snyder voiced description for network coverage of President Obama's inauguration in 2009 and 2013, and recently produced the first-ever audio-described tour of The White House. The ADP website is the nation's principal provider of information and resources on audio description.

The Technology of Video and Audio Streaming David Austerberry, 2015-11-24 * Learn the end-to-end process, starting with capture from a video or audio source through to the consumer's media player * A quick-start guide to streaming media technologies * How to monetize content and protect revenue with digital rights management For broadcasters, web developers, project managers implementing streaming media systems, David Austerberry shows how to deploy the technology on your site, from video and audio capture through to the consumer's media player. The book first deals with Internet basics and gives a thorough coverage of telecommunications networks and the last mile to the home. Video and audio formats are covered, as well as compression standards including

Windows Media and MPEG-4. The book then guides you through the streaming process, showing in-depth how to encode audio and video. The deployment of media servers, live webcasting and how the stream is displayed by the consumer's media player are also covered. A final section on associated technologies illustrates how you can protect your revenue sources with digital rights management, looks at content delivery networks and provides examples of successful streaming applications. The supporting website, www.davidausterberry.com/streaming.html , offers updated links to sources of information, manufacturers and suppliers. David Austerberry is co-owner of the new media communications consultancy, Informed Sauce. He has worked with streaming media since the late nineties. Before that, he has been product manager for a number of broadcast equipment manufacturers, and formerly had many years with a leading broadcaster.

Computer Speech Manfred R. Schroeder, 2013-06-29 New material treats such contemporary subjects as automatic speech recognition and speaker verification for banking by computer and privileged (medical, military, diplomatic) information and control access. The book also focuses on speech and audio compression for mobile communication and the Internet. The importance of subjective quality criteria is stressed. The book also contains introductions to human monaural and binaural hearing, and the basic concepts of signal analysis. Beyond speech processing, this revised and extended new edition of Computer Speech gives an overview of natural language technology and presents the nuts and bolts of state-of-the-art speech dialogue systems.

Multimedia Information Retrieval Peter Schäuble, 1997-04-30 Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases addresses the future need for sophisticated search techniques that will be required to find relevant information in large digital data repositories, such as digital libraries and other multimedia databases. Because of the dramatically increasing amount of multimedia data available, there is a growing need for new search techniques that provide not only fewer bits, but also the most relevant bits, to those searching for multimedia digital data. This book serves to bridge the gap between classic ranking of text documents and modern information retrieval where composite multimedia documents are searched for relevant information. Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases begins to pave the way for speech retrieval; only recently has the search for information in

speech recordings become feasible. This book provides the necessary introduction to speech recognition while discussing probabilistic retrieval and text retrieval, key topics in classic information retrieval. The book then discusses speech retrieval, which is even more challenging than retrieving text documents because word boundaries are difficult to detect, and recognition errors affect the retrieval effectiveness. This book also addresses the problem of integrating information retrieval and database functions, since there is an increasing need for retrieving information from frequently changing data collections which are organized and managed by a database system. *Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases* serves as an excellent reference source and may be used as a text for advanced courses on the topic.

Real-time Speech and Music Classification by Large Audio Feature Space Extraction Florian Eyben, 2016-01-06 This book reports on an outstanding thesis that has significantly advanced the state-of-the-art in the automated analysis and classification of speech and music. It defines several standard acoustic parameter sets and describes their implementation in a novel, open-source, audio analysis framework called openSMILE, which has been accepted and intensively used worldwide. The book offers extensive descriptions of key methods for the automatic classification of speech and music signals in real-life conditions and reports on the evaluation of the framework developed and the acoustic parameter sets that were selected. It is not only intended as a manual for openSMILE users, but also and primarily as a guide and source of inspiration for students and scientists involved in the design of speech and music analysis methods that can robustly handle real-life conditions.

The Routledge Handbook of Audio Description Christopher Taylor, Elisa Perego, 2022 This Handbook provides a comprehensive overview of the expanding field of Audio Description, the practice of rendering the visual elements of a multimodal product such as a film, painting, or live performance

in the spoken mode, for the benefit principally of the blind and visually impaired community. This volume brings together scholars, researchers, practitioners and service providers such as broadcasters from all over the world to cover as thoroughly as possible all the theoretical and practical aspects of this discipline. In 38 chapters, the expert authors chart how the discipline has become established both as an important professional service and as a valid academic subject, how it has evolved and how it has come to play such an important role in media accessibility. From the early history of the subject, through to the challenges represented by ever-changing technology, the Handbook covers the approaches and methodologies adopted to analyse the 'multimodal' text, in the constant search for the optimum selection of the elements to describe. This is the essential guide and companion for advanced students, researchers and Audio Description professionals within the more general spheres of translation studies and media accessibility--

American Speakout, Pre-Intermediate, Student Book with DVD/ROM and MP3 Audio CD Antonia Clare, J. J. Wilson, 2017-12-20

American Speakout Antonia Clare, J. J. Wilson, 2017 American Speakout is a new, comprehensive six-level General American English Course for adults. The course integrates authentic video from popular BBC programs and real life situations in every unit and builds the skills and knowledge learners need to express themselves confidently in a real English-speaking environment. Adapted from the success Speakout 2nd Edition and aligned with the Global Scale of English. American Speakout features tips on differences between American English and British English vocabulary, usage, and idioms as well as pointers on global English. While new audio focuses on students' acquisition of American English, a range of international accents in supporting material hones students' listening skills and readiness to communicate in our increasingly global world.

Sound Is Not Enough Svetlana Kouznetsova, 2022-10-27 This book is for any business executive, media producer, event organizer, educator, or employer who is ready to attract a more diversified audience for podcasts, videos, and live events. You can do this by reaching more than 48 million deaf and hard-of-hearing people in the United States and 466 million of them worldwide. Most of these people can access all your aural information when you provide high-quality, same-language captions and transcripts. This book will show you how. Professional captioning access also benefits many people who can hear: foreign language speakers, remedial readers, individuals with learning disabilities, those in noisy or quiet environments, and many others. Captioning can help your business because it improves experience for your users, attracts your loyal customers, and increases ROI to your businesses. Anyone interested in improving communication and information access will find this book useful and enlightening. *Sound Is Not Enough: The Art of Captioning for Universal Access* dispels common myths about deaf and hard-of-hearing people, describes the author's lived experience with deafness, and shares some examples of quality captioning for various types of aural information that can be enjoyed by anyone, regardless of hearing abilities.

Speakout Upper-Intermediate 2E American – Student Book with DVD-ROM and MP3 Audio CD & MyEnglishLab Antonia Clare, JJ Wilson, 2017-03-31 American Speakout follows a balanced approach to topics, language development and skills work. Speaking activities are prominent, but not at the expense of the other core skills of reading, writing and listening, which are developed systematically throughout.
