Researching Audio Description Anna Matamala,Pilar Orero,2016-06-21 Audio description is one of the many services available to guarantee accessibility to audiovisual media. It describes and narrates images and sounds and resulting audio is then mixed with the original soundtrack. Audio description is a complex process that touches production, distribution and reception. Researching Audio Description: New Approachesgathers academic information and data from the many existing research projects, practices, and training across the world. The book has a telescopic approach, from two introductory chapters where accessibility in general is contextualised as a human right, and the basic concepts of disability and impairment are explored. Research on specific features for audio description script drafting are focused in the second part of the book, with a view to revising existing funded projects and their outcomes. The book offers a wealth of information on both the practical and philosophical, from different approaches in perception and cognition, and different research methodologies. Project information contained in the contributions identifies trends in current research-funded studies which will be valuable as a pointer towards future proposals. The book shows the dynamic state of audio description practice, training and research, while contributing towards the growing critical mass needed in building the field of accessibility studies.

The Visual Made Verbal Joel Snyder,2020-10-25

Verbal descriptions of life have been around for centuries, but the digital age has made access to those descriptions even more important. Dr. Joel Snyder, an audio description pioneer, has created a book and website offering the first overview of the field, including its history, application to a range of genres, description of training techniques, and list of resources. Audio description brings the visual world to life, making theater productions, television shows, films, visual art and events accessible to people who are blind or have low vision. Describers employ succinct, vivid, imaginative words to convey visual images those with sight take for granted. Although countries worldwide have taken up the cause, the United States has fallen short on research and institutions to study the field. Dr. Snyder's book helps fill in some of those gaps. "For decades, Joel Snyder has combined his astonishing command of language with his keen attention to detail to create word pictures that stir the mind's eye, especially for patrons of the arts whose physical eyes cannot see. [...] His book has been long-awaited, and no doubt will become the standard for prospective audio describers around the world." -Kelsey Marshall, Founding Director of Accessibility, The John F. Kennedy Center for the Performing Arts, Washington, DC Dr. Joel Snyder is known internationally as one of the world's first "audio describers," a pioneer in the field of audio description, making theater events, museum exhibitions, and media accessible to people who are blind or have low vision. Since 1981, he has

introduced audio description techniques in 36 states and D.C. and in 35 countries. He holds a PhD in accessibility audio description from the Universitat Autònoma de Barcelona. Dr. Snyder's company, Audio Description Associates, LLC (www.audiodescribe.com) uses audio description to enhance a wide range of arts projects including video and film, museum exhibitions, and live events. As Director of Described Media for the National Captioning Institute, he supervised the production of descriptions for Sesame Street and dozens of feature films and nationally broadcast television; his descriptions can be heard at Smithsonian Institution exhibits, the Getty Museum, the Albright-Knox Gallery, and throughout the country at National Park Service visitor centers. As Director of the American Council of the Blind's Audio Description Project (www.acb.org/adp), Dr. Snyder voiced description for network coverage of President Obama's inauguration in 2009 and 2013, and recently produced the first-ever audio-described tour of The White House. The ADP website is the nation's principal provider of information and resources on audio description.

  The Technology of Video and Audio Streaming David Austerberry,2015-11-24 * Learn the end-to-end process, starting with capture from a video or

audio source through to the consumer's media player * A quick-start guide to streaming media technologies * How to monetize content and protect revenue with digital rights management For broadcasters, web developers, project managers implementing streaming media systems, David Austerberry shows how to deploy the technology on your site, from video and audio capture through to the consumer's media player. The book first deals with Internet basics and gives a thorough coverage of telecommunications networks and the last mile to the home. Video and audio formats are covered, as well as compression standards including Windows Media and MPEG-4. The book then guides you through the streaming process, showing in-depth how to encode audio and video. The deployment of media servers, live webcasting and how the stream is displayed by the consumer's media player are also covered. A final section on associated technologies illustrates how you can protect your revenue sources with digital rights management, looks at content delivery networks and provides examples of successful streaming applications. The supporting website, www.davidausterberry.com/streaming.html , offers updated links to sources of information, manufacturers and suppliers. David Austerberry is co-owner of the new media communications consultancy, Informed Sauce. He has worked with streaming media since the late nineties. Before that, he has been product manager for a number of broadcast equipment manufacturers, and formerly had many years with a leading broadcaster.

Multimedia Information Retrieval Peter

Schäuble,1997-04-30 Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases addresses the future need for sophisticated search techniques that will be required to find relevant information in large digital data repositories, such as digital libraries and other multimedia databases. Because of the dramatically increasing amount of multimedia data available, there is a growing need for new search techniques that provide not only fewer bits, but also the most relevant bits, to those searching for multimedia digital data. This book serves to bridge the gap between classic ranking of text documents and modern information retrieval where composite multimedia documents are searched for relevant information. Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases begins to pave the way for speech retrieval; only recently has the search for information in speech recordings become feasible. This book provides the necessary introduction to speech recognition while discussing probabilistic retrieval and text retrieval, key topics in classic information retrieval. The book then discusses speech retrieval, which is even more challenging than retrieving text documents because word boundaries are difficult to detect, and recognition errors affect the retrieval effectiveness. This book also addresses the problem of integrating information retrieval and database functions, since there is an increasing need for retrieving information from frequently changing data collections which are organized and managed by a database system.

Multimedia Information Retrieval: Content-Based Information Retrieval from Large Text and Audio Databases serves as an excellent reference source and may be used as a text for advanced courses on the topic.

Real-time Speech and Music Classification by Large Audio Feature Space Extraction Florian Eyben,2018-03-30 This book reports on an outstanding thesis that has significantly advanced the state-of-the-art in the automated analysis and classification of speech and music. It defines several standard acoustic parameter sets and describes their implementation in a novel, open-source, audio analysis framework called openSMILE, which has been accepted and intensively used worldwide. The book offers extensive descriptions of key methods for the automatic classification of speech and music signals in real-life conditions and reports on the evaluation of the framework developed and the acoustic parameter sets that were selected. It is not only intended as a manual for openSMILE users, but also and primarily as a guide and source of inspiration for students and scientists involved in the design of speech and music analysis methods that can robustly handle real-life conditions.

Sound Is Not Enough Svetlana Kouznetsova,2014-03-01 Do you want to increase your audience for your podcasts, videos, live events?Website owners, audio and video producers, event organizers, those considering careers in captioning and interpreting, and anyone interested in improving communication and information access will find this book useful and enlightening. It

dispels common myths about deaf and hard-of-hearing people, describes my personal experiences with deafness, and shares some examples of quality captioning for various types of aural information that can be enjoyed by anyone, regardless of hearing abilities.

Audio Description Anna Maszerowska,Anna Matamala,Pilar Orero,2014-10-30 Audio description

(AD) is a narrative technique which provides complementary information regarding the where, who, what and how of any audiovisual content. It translates the visuals into words. The principal function of this ad hoc narrative is to make audiovisual content available to all: be it a guided city tour of Barcelona, a 3D film, or a Picasso painting. Audio description is one of the younger siblings of Audiovisual Translation, and it is epigonic to the audiovisual translation modality chosen. This book is the first volume on the topic written in English and it brings together an international team of leading audio description teachers, scholars, and practitioners to address the basic issues regarding audio description strategies. Using one stimulus, Quentin Tarantino's film Inglourious Basterds (2009), the authors analysed what, when, where and how to audio describe. The book is written in a collaborative effort, following a bottom up approach. The many issues that surfaced in the process of the analysis were grouped in broader categories represented in the ten chapters this book contains. A good example of a successful international collaboration, the volume sets a robust practical and theoretical framework for the many studies on audio description to come in the future. Considering the structure of the individual contributions, the book is not only oriented towards the identification of the challenges that await the describer, but it also offers an insight into their possible solutions.
