Multimedia Content and the Semantic Web Giorgos Stamou,Stefanos Kollias,2005-10-31 The emerging idea of the semantic web is based on the maximum automation of the complete knowledge lifecycle processes: knowledge representation, acquisition, adaptation, reasoning, sharing and use. Text-based based browsers involve a costly information-retrieval process: descriptions are inherently subjective and usage is often confined to the specific application domain for which the descriptions were created. Automatic extracted audiovisual features are, in general, more objective, domain-independent and can be native to the audiovisual content. This book seeks to draw together in one concise volume the findings of leading researchers from around the globe. The focus, in particular, is on the MPEG-7 and MPEG-21 standards that seek to consolidate and render effective the infrastructure for the delivery and management of multimedia content. Provides thorough coverage of all relevant topics, including structure identification in audiovisual documents, object-based video indexing, multimedia indexing and retrieval using natural language, speech and image processing methods Contains detailed advice on ontology representation and querying for realizing semantics-driven applications Includes cutting-edge information on multimedia content description in MPEG-7 and MPEG-21 Illustrates all theory with real-world case studies gleaned from state-of-the-art worldwide research. The contributors are pioneers in the fields of multimedia analysis and knowledge technologies This unified, comprehensive up-to-date resource will appeal to integrators, systems suppliers, managers and consultants in the area of knowledge management and information retrieval; particularly those concerned with the automation of the semantic web. The detailed, theory-based practical advice is also essential reading for postgraduates and researchers in these fields.

Media in the Digital Age John V. Pavlik,2008-05-12 Digital technologies have fundamentally altered the nature and function of media in our society, reinventing age-old practices of public communication and at times circumventing traditional media and challenging its privileged role as gatekeepers of news and entertainment. Some critics believe these technologies keep the public involved in an informed discourse on matters of public importance, but it isn't clear this is happening on a large scale. Propaganda disguised as news is flourishing, and though interaction with the digital domain teaches children valuable skills, it can also expose them to grave risks. John V. Pavlik critically examines our current digital innovations blogs, podcasting, peer-to-peer file sharing, on-demand entertainment, and the digitization of television, radio, and satellites and their positive and negative implications. He focuses on present developments, but he also peers into the future, foreseeing a media landscape dominated by a highly fragmented, though active audience, intense media competition, and scarce advertising dollars. By embracing new technologies, however, Pavlik shows how professional journalism and media can hold on to their role as a vital information lifeline and continue to operate as the tool of a successful democracy.

Virtual Learning Environments Martin Weller, 2007-05 Virtual learning environments are widely spread in higher education, yet they are often under utilised by the institutions that employ them. This book addresses the need to move beyond thinking about the VLE simply in terms of the particular package that an institution has adopted, and viewing it as a significant educational technology that will shape much of the teaching and learning process in the coming years. Considering how virtual learning environments can be successfully deployed and used for effective teaching, it sets out a model for effective use, focussing on pedagogic application rather than a specific technology, and seeks to provide a bridge between pedagogical approaches and the tools educators have at their disposal. It contains essential advice for those choosing a VLE and encourages all those involved in the deployment of a VLEs to use them more productively in order to create engaging learning experiences.

Global Project Management Mr Jean Binder, 2012-09-28 Ongoing research shows that whilst 90 per cent of large companies are conducting global projects to take advantage of distributed skills, around-the-clock operations and virtual team environments, less than one third of them have effective, established practices to help project managers and team members working over a distance. As a consequence, most organisations struggle to reach the required levels of quality and effectiveness from these projects because their methods and practices are not adapted to a global multi-cultural environment, where most communication is in writing and asynchronous. Global Project Management describes how to adapt your organisation and your projects to thrive in this environment. The book goes beyond the recommendations on collaborative tools, to suggest the development of best practices on cross-cultural team management and global communication, recommend organisational changes and project structures, and propose alternatives for the implementation of the new practices and methods. The text is filled with real-life examples and techniques and illustrates how to apply the recommendations as part of the successful management of any global project.
