**Machine Learning for Beginners** Dr. Harsh Bhasin,2023-10-16 Learn how to build a complete machine learning pipeline by mastering feature extraction, feature selection, and algorithm training **KEY FEATURES** ● Develop a solid understanding of foundational principles in machine learning. ● Master regression and classification methods for accurate data prediction and categorization in machine learning. ● Dive into advanced machine learning topics, including unsupervised learning and deep learning. **DESCRIPTION** The second edition of “Machine Learning for Beginners” addresses key concepts and subjects in machine learning. The book begins with an introduction to the foundational principles of machine learning, followed by a discussion of data preprocessing. It then delves into feature extraction and feature selection, providing comprehensive coverage of various techniques such as the Fourier transform, short-time Fourier transform, and local binary patterns. Moving on, the book discusses principal component analysis and linear discriminant analysis. Next, the book covers the topics of model representation, training, testing, and cross-validation. It emphasizes regression and classification, explaining and implementing methods such as gradient descent. Essential classification techniques, including k-nearest neighbors, logistic regression, and naive Bayes, are also discussed in detail. The book then presents an overview of neural networks, including their biological background, the limitations of the perceptron, and the backpropagation model. It also covers support vector machines and kernel methods. Decision trees and ensemble models are also discussed. The final section of the book provides insight into unsupervised learning and deep learning, offering readers a comprehensive overview of these advanced topics. By the end of the book, you will be well-prepared to explore and apply machine learning in various real-world scenarios. **WHAT YOU WILL LEARN** ● Acquire skills to effectively prepare data for machine learning tasks. ● Learn how to implement learning algorithms from scratch. ● Harness the power of scikit-learn to efficiently implement common algorithms. ● Get familiar with various Feature Selection and Feature Extraction methods. ● Learn how to implement clustering algorithms. **WHO THIS BOOK IS FOR** This book is for both undergraduate and postgraduate Computer Science students as well as professionals looking to transition into the captivating realm of Machine Learning, assuming a foundational familiarity with Python. **TABLE OF CONTENTS** Section I: Fundamentals 1. **The New International Monetary System** Charles Wyplosz,2010-02-25 The New International Monetary System brings together twelve original contributions by leading scholars and practitioners to a conference convened in May 2008 on the occasion of the retirement of Alexander Swoboda. The contributions are arranged in three main parts. Part I deals with the international financial architecture, Part II examines the ever-controversial role of exchange rate regimes and Part III takes stock of the conduct of monetary policy and the challenges posed by the inflation-targeting strategy. The chapters provide considered assessments of virtually all the hotly debated issues that concern monetary policies seen from an international perspective. Edited by and with an introduction from Charles Wyplosz, the collection includes contributions from some of the key international figures in the field of monetary policy, central banking and exchange rate regimes to discuss contemporary international monetary issues. Contributors include Michael Bordo, Barry Eichengreen, Ronald McKinnon and Charles Goodhart. The volume also contains tributes from Paul Volcker and Jean-Pierre Roth.
