**End-to-End Encrypted Messaging** Rolf Oppliger,2020-04-30 This exciting resource introduces the core technologies that are used for Internet messaging. The book explains how Signal protocol, the cryptographic protocol that currently dominates the field of end to end encryption (E2EE) messaging, is

implemented and addresses privacy issues related to E2EE messengers. The Signal protocol and its application in WhatsApp is explored in depth, as well as the different E2EE messengers that have been made available in the last decade are also presented, including SnapChat. It addresses the notion of self-destructing messages (as originally introduced by SnapChat) and the use of metadata to perform traffic analysis. A comprehensive treatment of the underpinnings of E2EE messengers, including Pretty Good Privacy (PGP) and OpenPGP as well as Secure/Multipurpose Internet Mail Extensions (S/MIME) is given to explain the roots and origins of secure messaging, as well as the evolutionary improvements to PGP/OpenPGP and S/MIME that have been proposed in the past. In addition to the conventional approaches to secure messaging, it explains the modern approaches messengers like Signal are based on. The book helps technical professionals to understand secure and E2EE messaging on the Internet, and to put the different approaches and solutions into perspective.

*SUPER SECRETO - The Third Epoch of Cryptography* Theo Tenzer,2022-01-07 The global crisis of Privacy in the 21st century also includes discussions about the right to encryption and restrictions on so-called end-to-end encryption. In order to communicate confidentially and secure against eavesdropping, simple and practical encryption is required for everyone. But how can it be available to everyone? The magic of replacing legible characters with other apparently random and therefore illegible characters had been almost religious for centuries: only those initiated into the invention of a secret language could crack the messages. Encryption remained Super Secreto - Top Secret - Streng Geheim! In the age of smartphone and pocket computers, it is now available to everyone: ever more sophisticated math calculates the so-called cipher text with corresponding keys in our messengers. Both keys and encrypted text used to have to be transmitted to the recipient. In today's Epoch of Cryptography, the transmission of the keys is no longer necessary: The risky transport route for the keys can even be omitted! From the fascination of how Cryptography became abstinent in the transmission of keys - what effect it has on the desire of state agencies for secondary keys - and how multiple and exponential encryption makes resistant against the decryption-attempts of super-quantum-computers ... ... tells Theo Tenzer in this exciting political, technical and socially relevant innovation and science portrait on the Third Epoch of Cryptography.

**The New Era Of Exponential Encryption** Mele Gasakis,Max Schmidt,2019-01-08 In their book Era of Exponential Encryption - Beyond Cryptographic Routing the authors provide a vision that can demonstrate an increasing multiplication of options for encryption and decryption processes: Similar to a grain of rice that doubles exponentially in every field of a chessboard, more and more newer concepts and programming in the area of cryptography increase these manifolds: both, encryption and decryption, require more session-related and multiple keys, so that numerous options even exist for configuring hybrid encryption: with different keys and algorithms, symmetric and asymmetrical methods, or even modern multiple encryption, with that ciphertext is converted again and again to ciphertext. It will be analyzed how a handful of newer applications like e.g. Spot-On and GoldBug E-Mail Client & Crypto Chat Messenger and other open source software programming implement these encryption mechanisms. Renewing a key several times - within the dedicated session with cryptographic calling - has forwarded the term of perfect forward secrecy to instant perfect forward secrecy (IPFS). But even more: if in advance a bunch of keys is sent, a decoding of a message has to consider not only one present session key, but over dozens of keys are sent - prior before the message arrives. The new paradigm of IPFS has already turned into the newer concept of these

Fiasco Keys. Fiasco Keys are keys, which provide over a dozen possible ephemeral keys within one session and define Fiasco Forwarding, the approach which complements and follows IPFS. And further: by adding routing- and graph-theory to the encryption process, which is a constant part of the so called Echo Protocol, an encrypted packet might take different graphs and routes within the network. This shifts the current status to a new age: The Era of Exponential Encryption, so the vision and description of the authors. If routing does not require destination information but is replaced by cryptographic insights, then it is beyond cryptographic routing. Cryptographic Discovery means: If the cryptographic token is matching, the message belongs to me. The Echo Protocol is in this regard an initial welcome within the Era of Exponential Encryption. The authors identify also four arms within the Era of Exponential Encryption and derive from these developments social, legal, political and economic recommendations.

*Transformation of Cryptography* Linda A. Bertram,Gunther van Dooble,2019-07-31 The authors analyze over two dozen fundamental concepts of encryption, milestones, mega-trends and sustainable change in regard to Secret Communications. Beginnings and terminations within process and product life cycles lead in sum to a Transformation of Cryptography, which requires an interdisciplinary approach: Innovative breakthroughs in Cryptography are discussed within this essay as a third Epoch of Cryptography like the solving of the key transport problem with the Cesura in Cryptography by Secret Strems and also with Juggerknot Keys. Multi-Encryption and the Exponential Encryption requires New Thinking for Cryptoanalysis - in alliance with the described concepts of e.g. Cryptographic Calling, Cryptographic Discovery and Fiasco Forwarding with Fiasco Keys. Mathematicians have with the calculation of the truth the human right of privacy in their hands - on the other side elaborated competencies and skills in the internet age are required e.g. to program applications and also to update first the terms and nomenclatura of today interfering interdisciplinary scientific views. As an educational outlook the further Democratization of Encryption is based on discussing the Transformations of Cryptography in teaching lessons and on the development of open source programming's, which provide not only insight in their codes, processes and algorithms, but also provide e.g. with Virtual Keyboards within the same computational process a Trusted Execution Environment (TEE) and a technical- and network-oriented solution for Going the Extra-Mile: What that is? is described in detail at the end of this edition.
