Ignition! John Drury Clark,2018-05-23 This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as “a good book on rocket stuff...that’s a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

Words in Blood, Like Flowers ,2006-01-01 Why did Nietzsche claim to have written in blood? Why did Heidegger remain silent after World War II about his participation in the Nazi Party? How did Hölderlin's voice and the voices of other, more ancient poets come to echo in philosophy? *Words in Blood, Like Flowers* is a classical expression of continental philosophy that critically engages the intersection of poetry, art, music, politics, and the erotic in an exploration of the power they have over us. While focusing on three key figures—Hölderlin, Nietzsche, and Heidegger—this volume covers a wide range of material, from the Ancient Greeks to the vicissitudes of the politics of our times, and approaches these and other questions within their hermeneutic and historical contexts. Working from primary texts and a wide range of scholarly sources in French, German, and English, this book is an important contribution to philosophy's most ancient quarrels not only with poetry, but also with music and erotic love.

Cognitive Psychology Michael W. Eysenck, Mark T. Keane, 2000 This is a thorough revision and updating of the extremely successful third edition. As in previous editions, the following three perspectives are considered in depth: experimental cognitive psychology; cognitive science, with its focus on cognitive modelling; and cognitive neuropsychology with its focus on cognition following brain damage. In addition, and new to this edition, is detailed discussion of the cognitive neuroscience perspective, which uses advanced brain-scanning techniques to clarify the functioning of the human brain. There is detailed coverage of the dynamic impact of these four perspectives on the main areas of cognitive psychology, including perception, attention, memory, knowledge representation, categorisation, language, problem-solving, reasoning, and judgement. The aim is to provide comprehensive coverage that is up-to-date, authoritative, and accessible. All existing chapters have been extensively revised and re-organised. Some of the topics receiving much greater coverage in this edition are: brain structures in perception, visual attention, implicit learning, brain structures in memory, prospective memory, exemplar theories of categorisation, language comprehension, connectionist models in perception, neuroscience studies of thinking, judgement, and decision making. *Cognitive Psychology: A Students Handbook* will be essential reading for undergraduate students of psychology. It will also be of interest to students taking related courses in computer science, education, linguistics, physiology, and medicine.

Construction and Building Research Carmen Llinares-Millán, Igor Fernández-Plazaola, Francisco Hidalgo-Delgado, María Montserrat Martínez-Valenzuela, Francisco Javier Medina-Ramón, Inmaculada Oliver-Faubel, Isabel Rodríguez-Abad, Andrea Salandin, Rafael Sánchez-Grandia, Isabel Tort-Ausina, 2014-01-31 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.

Robot Ethics Patrick Lin, Keith Abney, George A. Bekey, 2014-01-10 Prominent experts from science and the humanities explore issues in robot ethics that range from sex to war. Robots today serve in many roles, from entertainer to educator to executioner. As robotics technology advances, ethical concerns become more pressing: Should robots be programmed to follow a code of ethics, if this is even possible? Are there risks in forming emotional bonds with robots? How might society—and ethics—change with robotics? This volume is the first book to bring together prominent scholars and experts from both science and the humanities to explore these and other questions in this emerging field. Starting with an overview of the issues and relevant ethical theories, the topics flow naturally from the possibility of programming robot ethics to the ethical use of military robots in war to legal and policy questions, including liability and privacy concerns. The contributors then turn to human-robot emotional relationships, examining the ethical implications of robots as sexual partners, caregivers, and servants. Finally, they explore the possibility that robots, whether biological-computational hybrids or pure machines, should be given rights or moral consideration. Ethics is often slow to catch up with technological developments. This authoritative and accessible volume fills a gap in both scholarly literature and policy discussion, offering an impressive collection of expert analyses of the most crucial topics in this increasingly important field.

Gender Change in Academia Birgit Riegraf, Brigitte Aulenbacher, Edit Kirsch-Auwärter, Ursula Müller, 2010-07-15 Editors' Foreword The fundamental changes currently taking place in the national and international science landscapes can no longer be overlooked. Within those changes, reforms do not go 'as planned' but, as is always the case with processes of rationalisation, have a series of unintended effects. At the same time it becomes increasingly clear who in this process are the winners and who are the losers, although this is still subject to fluctuation and change. This can be illustrated by two examples from current events: Where the range of taught courses is concerned, as part of the Bologna Process the new structuring of student study paths and their organisation is aimed at unifying the European area of science to ensure a study that is equally permissive and efficient. However, it is to be deplored that the mobility of students has become more restricted because of an increasing specialisation in the available study paths. Also, bachelor degrees do not meet with the anticipated high response from the labour market in all countries, so that the master's degree is becoming more or less a 'must', while at the same time the number of study places on master's courses is limited. Instead of the intended reduction in the duration of study time in comparison to the previous German 'Magister' and 'Diplom', rather a prolongation in the duration of studies has been recorded.
