*Transforming Automobile Assembly* Koichi Shimokawa,Ulrich Jürgens,Takahiro Fujimoto,2012-12-06 For the world's

leading car-makers, the early 1990s brought radical changes. The reports published by MIT shocked management in European and American industries. Former major companies had to face consequences no one had expected. The assembly-lines were reorganized in order to achieve higher quality at lower costs. Five years after the MIT report, this book poses the question: What are the results of this revolution in work organization? Scientists and practitioners, many of them involved in earlier reports, evaluate the changes to the automotive industry in Europe and Japan. Focusing on intelligent system solutions for auto mobility and beyond, it discusses in detail innovations and technologies enabling electrification, automation and diversification, as well as strategies for a better integration of vehicles into the networks of traffic, data and power. Further, the book addresses other relevant topics, including the role of human factors and safety issues in automated driving, solutions for shared mobility, as well as automated bus transport in rural areas. Implications of current circumstances, such as those generated by climate change, on the future development of auto mobility, are also analysed, providing researchers, practitioners and policy makers with an authoritative snapshot of the state-of-the-art, and a source of inspiration for future developments and collaborations.

**Auto-Cars Cars, Tramcars, and Small Cars** D. Farman, 2015-06-16 Excerpt from Auto-Cars Cars, Tramcars, and Small Cars The interest taken in the new industry of road locomotion and the development it is acquiring in Franco impels me to congratulate you on the task you have undertaken, and though, notwithstanding your request, I do not intend to write a preface, I cannot refrain from the pleasure of testifying to the opportuneness and value of your interesting work. This industry, which a few years back was but in its experimental stage, has now become a most important national one, which is due entirely to the results obtained by French manufacturers. To spread the knowledge of these results and to instil a desire of adopting this new and fruitful application of mechanics to road locomotion is indeed useful work. You have fulfilled these aims by writing your book, and no doubt your readers will feel the same pleasure as myself in porusing the second part, dealing historically and descriptively with our carriages of the future. Theorists and scientists will find in the first part scientific information, technical details, and the laws that govern this new industry.
