*Managing Project Risk* James B. Atkins, Grant A. Simpson, 2008-04-04 Discover the benefits of effective risk management practices Risk management may not be a standard course in architecture school, but it is an essential concern for architects and related professionals working today. *Managing Project Risk* is a key resource for integrating good risk management into professional practice. Based on a popular series of articles in *AIArchitect*, this accessible volume offers an on-the-ground perspective of what can happen on the job and what architects can do to prevent or mitigate threatening conditions and events. With an engaging, non-legalistic style, authors Atkins and Simpson draw upon their considerable experience and upon AIA Contract Documents to show how sound risk management strategies work in a variety of real-world settings, covering such practical areas as: \* Risk management fundamentals \* Contracts \* Relationships with clients \* Understanding the architect's role in the project \* Risk issues with digital drawings \* The modern architectural workplace Rendering potentially dry topics lively with wit and anecdote, *Managing Project Risk* resonates with the experience of contemporary architects, while offering helpful suggestions applicable not only to risk management but also to project management and professional development.

*Adapt As An Architect* Randy Deutsch, 2021-04-30 *Adapt As An Architect: A Mid-Career Companion* is the only book that helps design professionals to navigate the vast heart of the architect's journey. It serves as a roadmap: a career GPS that provides options for architects getting from where they are today to where they really want to be. The focus of this optimistic, engaging book is on continued relevance, professional engagement, perseverance, and career longevity. It argues that mid-career is the lynchpin of the architect's career, and provides the guidance and support that practices themselves are missing for emerging professionals, who are often left to their own devices to find their way as they approach the middle of their career. This book means architects don't need to navigate these years on their own.

Design Added Value Ömer Akın, 2021-07-22 Design has intrinsic, economic value. To make this value tangible, design features of buildings need to be explored, measured, and taken into account when initiating projects and financing their construction. It is as calculable as the extrinsic value of a project. However, we need concepts, strategies, methods, techniques, and tools to do just that. The Value Based Design approach and Design-Added Value (D-AV) methodology in this book enables architects, engineers, contractors and owner-clients of buildings to benefit from extraordinary design and construction features. It explains the rationale and motivation for D-AV methodology, outlines and illustrates this methodology with examples, provides complete and detailed examples of

how the key analysis techniques work through historical case studies, and describes specific methods used in application of the D-AV methodology, such as Bayesian statistics, cost benefit analysis, pairwise comparison techniques, cognitive walkthroughs, and optimization.

**Sticks & Stones / Steel & Glass** Anthony Poon, 2017-03-20 In this personal and revealing book, Anthony Poon takes us on a creative journey that begins with his re-envisioning of a seaside public space as a very young architect. Poon has designed hundreds of buildings across the United States and internationally, from eco-friendly homes to public schools, from intimate retail venues and restaurants to sports arenas, from university housing to retreats and places of worship. *Sticks & Stones / Steel & Glass* takes us inside a purposive yet open mind always hoping to “design it all,” to weave together light and material, culture and commerce, music and design, a good meal and the joy of gathering to share it. In these pages we engage the creative processes of a thoughtful and intense architect whose works—public and private—all strive to enhance his clients’ stories and identities. Poon’s goal in each commission is to reward those who will enjoy and inhabit the structures he designs. In every building designed by Anthony Poon art is shelter and architecture is a social good.

Autotelic Architect Sumita Sinha, 2016-07-01 *Autotelic Architect* explores how movements towards more self-initiated projects, greater collaboration and design activism have changed how architects and designers are practicing, as well as the kinds of projects they are working on. Similar to the autotelic self that transforms potential problems into enjoyable challenges, the ‘Autotelic Architect’ does not avoid societal changes, but instead learns to harness their creative potential. Using new research and case studies from past and present, the author analyses the educational and professional implications of operating as a ‘non-conventional’ progressive participatory design practice. Drawing on a range of global case studies of pioneering architects in the field, she reflects upon current and future trends at local, national and international level, and additionally examines marketing and practical issues for architects. Illustrated with more than 30 black and white images, this is a compelling read for any practicing architect.

**Building (in) the Future** Peggy Deamer, Phillip Bernstein, 2010-03-03 Thirty-four contributors including designers, engineers, fabricators, contractors, construction managers, planners, and scholars examine how contemporary practices of production are reshaping the design/construction process. Through observations, arguments, and detailed project explorations contributors describe new models of practice and reorganizations of labor for the twenty-first century. Chapters include a reconsideration of craft in light of digital fabrication; an exploration of new methods of collaboration; an analysis of changes in contracts and standards; and an assessment of the new market realities of mass production and customization. *Building (in) the Future* includes contributions by architects James Carpenter, Mark Goulthorpe, Sheila Kennedy, Charlie Lazor, Joshua Price-Ramus, Robert A.M. Stern, and James Timberlake; BIM manager Rodd Merchant; curator Barry Bergdoll, engineer Klaus Bollinger; lawyers Howard

W. Ashcraft, Jr. and Chris Noble; marketing manager Ewa Magnusson; and professors Branko Kolarevic, Reinhold Martin, and Moshen Mostafavi.

Becoming an Architect Janelle Zara, 2019-09-03 An illuminating guide to a career as an architect written by art and design journalist Janelle Zara and based on the real-life experiences of two experts in the field—required reading for someone considering a path to this rewarding profession. Go behind the scenes and be mentored by the best to find out what it's really like, and what it really takes, to become an architect. Design critic Janelle Zara takes readers to the front lines to offer a candid portrait of this challenging profession. What does it actually mean to be an architect today? What do they do? How do they do it? Zara shadows acclaimed architects Sharon Johnston and Mark Lee of the prestigious Los Angeles-based firm Johnston Marklee. Learn from the founders as they near the unveiling of their major new building, the Menil Drawing Institute. Sit in on meetings as they compete for new projects, and watch as they conceive, draft, render, plan, construct, and execute buildings. Architects must juggle hundreds of items to ensure their ideas come to life as planned. Zara shows that good architects must have artistic vision as well as organizational acumen. An accessible and informed primer on a hot profession, *Becoming an Architect* is the most valuable informational interview you'll have—required reading for anyone considering this dream job.

Architecture | Design | Data Phillip Bernstein, 2018-09-24 A systemic transformation is underway in architectural design, engineering and construction. The discipline and profession of architecture is being reshaped in a moment where information, insight and predictions generated during the design process move into construction no longer essentially via drawings. Other, more profound digital techniques yield fundamentally different workflows, responsibilities and business models for architects. This book offers a comprehensive framework, detailed analysis and critical assessment of the challenges and opportunities inherent in those changes. The author sets out to provide direction for a new era in architectural creation that can be understood and managed by a profession which must become better equipped to direct its future.

*Collaborations in Architecture and Engineering* Clare Olsen, Sinead Mac Namara, 2014-05-09 *Collaborations in Architecture and Engineering* focuses on team-building and problem-solving between architects and engineers to prepare you for working together in practice. It provides an overview and foundation for interdisciplinary collaboration so that you can create innovative proposals for optimization, performance, and aesthetic goals. It also shows you how to solve real-world problems and how to engage creatively with technological challenges so that you can be a productive member of any team. The authors, an architect and an engineer, share guidelines learned from their experiences and observations on how to insure productive communication, engage in interdisciplinary discussions, and establish common goals and values. Throughout the book are many case study examples of architect

and engineer collaborations—such as those between SANAA and Mutsuro Sasaki, Foster + Partners and Buro Happold, Steven Holl and Guy Nordenson, and SHoP Architects and ARUP. The book also includes a discussion about integrated project delivery (IPD) contracts and administration, so you'll be ready for better integration.

**Towards a New Architect** Yasmin Shariff, Jane Tankard, 2010-08-20 After three years of education, architecture students have to start out on their first year of practical training as the initial step in a career in the professional world--all too often without enough clear advice to make sure that their first step is in the right direction. *Towards a New Architect* helps you to make the right moves. It explores how to research the opportunities available, prepare your CV, make sure that it gets you noticed for the right reasons and deliver a successful interview as part of a clear plan for building your career as an architect. For many architecture students the ultimate goal in their career is to set up in practice for themselves. This book sets out the steps to get there successfully and to make the process enjoyable and fulfilling.

*Think Like An Architect* Randy Deutsch, 2020-10-31 Do you know how to think like an architect? Do you know why you should? How do you make sure that you have the critical thinking tools necessary to prosper in your academic and professional career? This book gives you the answers. Architects have a valuable and critical set of multiple thinking types that they develop throughout the design process. In this book, Randy Deutsch shows readers how to access those thinking types and use them outside pure design thinking – showing how they can both solve problems but also identify the problems that need solving. To think the way the best architects do. With a clear, driving narrative, peppered with anecdote, stories and real-life scenarios, this book will future-proof the architectural student. Change is coming in the architecture profession, and this is a much-needed exploration of the critical thinking skills that architects have in abundance, but that are not taught well enough within architecture schools. These skills are crucial in being able to respond agilely to a future that nobody is quite sure of.

*BIM and Integrated Design* Randy Deutsch, 2011-08-15 Ready or not, it's high time to make BIM a part of your practice, or at least your vocabulary, and this book has as much to offer beginners as it does seasoned users of building information modeling software. –Chicago Architect The first book devoted to the subject of how BIM affects individuals and organizations working within the ever-changing construction industry, *BIM and Integrated Design* discusses the implementation of building information modeling software as a cultural process with a focus on the technology's impact and transformative effect—both potentially disruptive and liberating—on the social, psychological, and practical aspects of the workplace. *BIM and Integrated Design* answers the questions that BIM poses to the firm that adopts it. Through thorough research and a series of case study interviews with industry leaders—and leaders in the making out from behind the monitor—*BIM and Integrated Design* helps you learn: Effective learning strategies for fully understanding BIM software and its use Key points about integrated design to help you promote the process to owners and your team How BIM changes not only the technology, process, and delivery but also the leadership playing field How to become a more effective leader no matter where you find yourself in the organization or on the project team How the introduction of BIM into the workforce has significant education,

recruitment, and training implications Covering all of the human issues brought about or exacerbated by the advent of BIM into the architecture workplace, profession, and industry, BIM and Integrated Design shows how to overcome real and perceived barriers to its use.

**Down Detour Road** Eric J. Cesal, 2010-08-06 A young architect's search for new architectural values in a time of economic crisis. I paused at the stoop and thought this could be the basis of a good book. The story of a young man who went deep into the bowels of the academy in order to understand architecture and found it had been on his doorstep all along. This had an air of hokeyness about it, but it had been a tough couple of days and I was feeling sentimental about the warm confines of the studio which had unceremoniously discharged me upon the world.—from Down Detour Road What does it say about the value of architecture that as the world faces economic and ecological crises, unprecedented numbers of architects are out of work? This is the question that confronted architect Eric Cesal as he finished graduate school at the onset of the worst financial meltdown in a generation. Down Detour Road is his journey: one that begins off-course, and ends in a hopeful new vision of architecture. Like many architects of his generation, Cesal confronts a cold reality. Architects may assure each other of their own importance, but society has come to view architecture as a luxury it can do without. For Cesal, this recognition becomes an occasion to rethink architecture and its value from the very core. He argues that the times demand a new architecture, an empowered architecture that is useful and relevant. New architectural values emerge as our cultural values shift: from high risks to safe bets, from strong portfolios to strong communities, and from clean lines to clean energy. This is not a book about how to run a firm or a profession; it doesn't predict the future of architectural form or aesthetics. It is a personal story—and in many ways a generational one: a story that follows its author on a winding detour across the country, around the profession, and into a new architectural reality.

*Getting There by Design* Kenneth Allinson, 2012-09-11 There was military project management. There was construction project management. Then there was business project management, a tool described as 'the wave of the future'. Where are architects in all this, professionals whose work has always been project-driven? There is design management in engineering, product design, graphics, packaging, management theory and even in politics. Construction consultants talk about managing design. When are architects going to become committed to managing design? *Getting There by Design* adopts an architect's view to design and project management. It sets out the fundamental principles and shows how they are applied, dealing with these two topics as one indivisible subject. 'Getting There by Design' demonstrates how to: - make project efforts goal-oriented - set up a planning and monitoring basis to architectural projects - put the architect's fee calculus on a rationale basis - diagnose your firm's practice culture - develop successful teams Put your practice onto a more effective basis. Ken Allinson is an architect in private practice and principal of 'Architectural Dialogue'. He also teaches design studio and lectures on design and project management. He was formerly an associate at DEGW London and the Terry Farrell Partnership. He has practice experience in Europe, the USA and Japan and is the author of 'The Wild Card of

Design' (1993).

**Construction of Architecture** Ralph W. Liebing, 2011-08-24 Buildings don't just appear. While the aesthetics and theory of architecture have their glamour, architecture would not exist without the hands-on, nuts-and-bolts process of construction. Construction of Architecture gives architects, contractors, managers, trade workers, and anyone else involved in a building project a thorough overview of the process of taking or converting a fine design concept from a paper exercise to a finished, full-sized, occupiable and usable building. In an easy-to-read, conversational style, Ralph Liebing distills the often-complex procedures in the construction of architecture into clear, understandable phases. Connecting each phase to the next, he takes you step-by-step from project inception and documentation to code compliance to bidding and the contract through finalization of the project and occupancy of the completed building. This book is enhanced with features such as: Drawings and photographs of the building process. Samples of documents used in construction. A concise narrative of the construction of a typical commercial building, from start to finish. An Instructor Companion Site with an expanded glossary and additional resources. With this primer in hand, every aspiring building professional will have the solid foundation in the concepts and skills needed to bring any building project to fruition, from inception to occupancy.
