Web Components in Action Benjamin Farrell,2019-08-15

Summary Web Components are a standardized way to build reusable custom elements for web pages and applications using HTML, CSS, and JavaScript. A Web Component is well-encapsulated, keeping its internal structure separate from other page elements so they don't collide with the rest of your code. In Web Components in Action you'll learn to design, build, and deploy reusable Web Components from scratch. Foreword by Gray Norton. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology The right UI can set your sites and web applications apart from the ordinary. Using the Web Components API, you can build Custom Elements and then add them to your pages with just a simple HTML tag. This standards-based design approach gives you complete control over the style and behavior of your components and makes them radically easier to build, share, and reuse between projects. About the Book Web Components in Action teaches you to build and use Web Components from the ground up. You'll start with simple components and component-based applications, using JavaScript, HTML, and CSS. Then, you'll customize them and apply best design practices to maximize reusability. Through hands-on projects, you'll learn to build production-ready Web Components for any project, including color pickers, advanced applications using 3D models, mixed reality, and machine learning. What's inside Creating reusable Custom Elements without a framework Using the Shadow DOM for ultimate component encapsulation Leveraging newer JS features to organize and reuse code Fallback strategies for using Web Components on older browsers About the Reader Written for web developers experienced with

Clawhammer Banjo from Scratch Dan Levenson,2011-01-24 Southern Appalachian native Dan Levenson and Mel Bay Publications present Clawhammer Banjo from Scratch - A Guide for the Claw-less! This book teaches clawhammer banjo the way we play, not the way others say. It really begins as though you really have NO knowledge of how to play the five string banjo clawhammer style. Based on Dan's innovative Meet the Banjo program (where Dan brings 15 banjos and teaches players who may have never held a banjo), this book assumes no prior experience. Beginning at the beginning, Dan presents a brief history of the 5-string banjo then goes over the parts of the banjo, holding the banjo, right and left hand positions and his basic clawhammer strum. Even the strum is broken down into the steps of the finger and thumb. You are guided through the chords, the scale and then the individual notes of each of 12 jam session favorite tunes from scratch. Includes 2 reference CD's with all exercises, tunes (slow and up to speed), and a fiddle version of each tune.

<u>Modelling, Pricing, and Hedging Counterparty Credit Exposure</u>
Giovanni Cesari,John Aquilina,Niels Charpillon,Zlatko Filipovic,Gordon Lee,Ion Manda,2009-12-06 It was the end of 2005 when our employer, a major European Investment Bank, gave our team the mandate to compute in an accurate way the counterparty credit exposure arising from exotic derivatives traded by the ?rm. As often happens, - posure of products such as, for example, exotic interest-rate, or credit derivatives were modelled under conservative assumptions and credit of?cers were struggling to assess the real risk. We started with a few models written on spreadsheets, t- lored to very speci?c instruments, and soon it became clear that a more systematic approach was needed. So we wrote some tools that could be used for some classes of relatively simple products. A couple of years later we are now in the process of building a system that will be used to trade and hedge counterparty credit ex- sure in an accurate way, for all types of derivative products in all asset classes. We had to overcome problems ranging from modelling in a consistent manner different products booked in different systems and building the appropriate architecture that would allow the computation and pricing of credit exposure for all types of pr- ucts, to ?nding the appropriate management structure across Business, Risk, and IT divisions of the ?rm. In this book we describe some of our experience in modelling counterparty credit exposure, computing credit valuation adjustments, determining appropriate hedges, and building a reliable system.
