Computer-Related Risks Peter G. Neumann, 1994-10-18 This sobering description of many computer-related failures throughout our world deflates the hype and hubris of the industry. Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future. —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks; outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of technology. It is must reading for anyone with even a remote involvement with computers and communications—which today means almost everyone. Computer-Related Risks: Presents comprehensive coverage of many different types of risks Provides an essential system-oriented perspective Shows how technology can affect your life—whether you like it or not!

Modern Telemetry Ondrej Krejcar, 2011 Telemetry is based on knowledge of various disciplines like Electronics, Measurement, Control and Communication along with their combination. This fact leads to a need of studying and understanding of these principles before the usage of Telemetry on selected problem solving. Spending time is however many times returned in form of obtained data or knowledge which telemetry system can provide. Usage of telemetry can be found in many areas from military through biomedical to real medical applications. Modern way to create a wireless sensors remotely connected to central system with artificial intelligence provide many new, sometimes unusual ways to get a knowledge about remote objects behaviour. This book is intended to present some new up to date accesses to telemetry problems solving by use of new sensors conceptions, new wireless transfer or communication techniques, data collection or processing techniques as well as several real use case scenarios describing model examples. Most of book chapters deals with many real cases of

telemetry issues which can be used as a cookbooks for your own telemetry related problems.

Beyond the Limits Paul E. Ceruzzi,1989 Computers and flying machines are two dominant technologies of our time. Beyond the Limits shows the ways in which they interact, clearly illustrating the complex issues and devices involved in their mutual evolution. It describes and illustrates how computer technology has affected the theory and practice of the engineering and operations of aircraft and spacecraft from 1945 to the present. Paul Ceruzzi points out that the revolution in aerospace technology has been going on for at least forty years. For the first time, he tells how modern flight depends on computers, how this came about, and what its consequences are. He brings to light new facets of the individual stories of aerospace and computing, while also revealing more general themes about the dynamics and evolution of these modern technologies. Spacecraft and fighters make use of leading-edge computer technologies in their design, testing manufacture, navigation and operation; moreover pilots and astronauts rely on computer simulations throughout their training. Ceruzzi describes these technologies and their history. In separate chapters he focuses on Northrop (midwife of the computer industry), missile tracking, Whirlwind, Apollo, Minuteman, and the software involved. An appendix discusses the role that on-board and ground computers played in the explosion of the space shuttle Challenger. Paul Ceruzzi is Associate Curator at the National Air and Space Museum of the Smithsonian Institution. Beyond the Limits was written to accompany the opening of a major new gallery devoted to the subject at the Smithsonian's National Air and Space Museum.

The Evening Star Henry S. F. Cooper,1994 Much more is observed than Venus in *The Evening Star*, a smoothly written account of the Magellan spacecraft... Mr. Cooper is able to convey the sense of excitement felt by the engineers and scientists. But the star of the story is definitely Venus.--New York Times. The anger and the arguments, the petty feuds, the politics of science, the grubbing for grants, make fascinating reading.--Nature. In size, density, and composition, Venus is almost identical to Earth, yet its nature and history turn out to be as different as close relatives sometimes can be. In *The Evening Star* Henry S. F. Cooper, Jr., veteran science and space reporter for the New Yorker, tracks the Magellan spacecraft that has been mapping Venus from orbit since August 1990. In eloquent, vivid prose, Cooper introduces us to the engineers who have nursed the spacecraft's fragile electronics and the scientists who have used the spacecraft's data to assemble a picture of this strange new world. An evocative narrative of the people who do science and the challenges that confront them, *The Evening Star* is an illuminating portrait not only of Venus's character but of Earth's as well, and of the place of the two siblings in the family of planets. What makes this a particularly gripping story is that the author had extraordinary access to the project scientists. The result is a superb first-hand account of the Magellan scientists grappling with the bizarre geology of a world in the grip of a runaway greenhouse effect... Lucid, informative, and entertaining.--Air & Space. A unique perspective on the Magellan program, seen through the eyes of the engineers and scientists working on it.--Christian Science Monitor.
