Maritime Cybersecurity Steven D Shepard, PhD, Gary C Kessler, PhD, 2020-09-02

The maritime industry is thousands of years old. The shipping industry, which includes both ships and ports, follows practices that are as old as the industry itself, yet relies on decades-old information technologies to protect its assets. Computers have only existed for the last 60 years and computer networks for 40. Today, we find an industry with rich tradition, colliding with new types of threats, vulnerabilities, and exposures. This book explores cybersecurity aspects of the maritime transportation sector and the threat landscape that seeks to do it harm.

Proceedings, 1996 IEEE Symposium on Security and Privacy, 1996 This volume contains a selection of 20 papers presented at the IEEE Symposium on Security and Privacy held in Oakland, California in May 1996. Malicious Cryptography Adam Young, Moti Yung, 2004-07-30 Hackers have uncovered the dark side of cryptography—that device developed to defeat Trojan horses, viruses, password theft, and other cyber-crime. It's called cryptovirology, the art of turning the very methods designed to protect your data into a means of subverting it. In this fascinating, disturbing volume, the experts who first identified cryptovirology show you exactly what you're up against and how to fight back. They will take you inside the brilliant and

devious mind of ahacker—as much an addict as the vacant-eyed denizen of thecrackhouse—so you can feel the rush and recognize your opponent’s power. Then, they will arm you for thecounterattack. This book reads like a futuristic fantasy, but be assured, thethreat is ominously real. Vigilance is essential, now. Understand the mechanics of computationally secure informationstealing Learn how non-zero sum Game Theory is used to developsurvivable malware Discover how hackers use public key cryptography to mountextortion attacks Recognize and combat the danger of kleptographic attacks onsmart-card devices Build a strong arsenal against a cryptovirology attack

Encyclopedia of Cybercrime Samuel C. McQuade III, 2008-11-30 There are today no more compelling sets of crime and security threats facing nations, communities, organizations, groups, families and individuals than those encompassed by cybercrime. For over fifty years crime enabled by computing

and telecommunications technologies have increasingly threatened societies as they have become reliant on information systems for sustaining modernized living. Cybercrime is not a new phenomenon, rather an evolving one with respect to adoption of information technology (IT) for abusive and criminal purposes. Further, by virtue of the myriad ways in which IT is abused, it represents a technological shift in the nature of crime rather than a new form of criminal behavior. In other words, the nature of crime and its impacts on society are changing to the extent computers and other forms of IT are used for illicit purposes. Understanding the subject, then, is imperative to combatting it and to addressing it at various levels. This work is the first comprehensive encyclopedia to address cybercrime. Topical articles address all key areas of concern and specifically those having to with: terminology, definitions and social constructs of crime; national infrastructure security vulnerabilities and capabilities; types of attacks to computers and information systems; computer abusers and cybercriminals; criminological, sociological, psychological and technological theoretical underpinnings of cybercrime; social and economic impacts of crime enabled with information technology (IT) inclusive of harms experienced by victims of cybercrimes and computer abuse; emerging and controversial issues such as online pornography, the computer hacking subculture and potential negative effects of electronic gaming and so-called computer addiction; bodies and specific examples of U.S. federal laws and regulations that help to prevent

cybercrimes; examples and perspectives of law enforcement, regulatory and professional member associations concerned about cybercrime and its impacts; and computer forensics as well as general investigation/prosecution of high tech crimes and attendant challenges within the United States and internationally.

Affective Health and Masculinities in South Africa Hans Reihling, 2020-04-03 Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern

individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.

Markov Models for Pattern Recognition Gernot A. Fink, 2014-01-14 This thoroughly revised and expanded new edition now includes a more detailed treatment of the EM algorithm, a description of an efficient approximate Viterbi-training procedure, a theoretical derivation of the perplexity measure and coverage of multi-pass decoding based on n-best search. Supporting the discussion of the theoretical foundations of Markov modeling, special emphasis is also placed on practical algorithmic solutions. Features: introduces the formal framework for Markov models; covers the robust handling

of probability quantities; presents methods for the configuration of hidden Markov models for specific application areas; describes important methods for efficient processing of Markov models, and the adaptation of the models to different tasks; examines algorithms for searching within the complex solution spaces that result from the joint application of Markov chain and hidden Markov models; reviews key applications of Markov models.

Narratives Unfolding Martha Langford, 2017-07-18 Somewhere between global and local, the nation still lingers as a concept. National art histories continue to be written – some for the first time – while innovative methods and practices redraw the boundaries of these imagined communities. Narratives

Unfolding considers the mobility of ideas, transnationalism, and entangled histories in essays that define new ways to see national art in ever-changing nations. Examining works that were designed to reclaim or rethink issues of territory and dispossession, home and exile, contributors to this volume demonstrate that the writing of national art histories is a vital project for intergenerational exchange of knowledge and its visual formations. Essays showcase revealing moments of modern and contemporary art history in Canada, Egypt, Iceland, India, Ireland, Israel/Palestine, Romania, Scotland, Turkey, and the United Arab Emirates, paying particular attention to the agency of institutions such as archives, art galleries, milestone exhibitions, and artist retreats. Old and emergent art cities, including Cairo, Dubai, New York, and Vancouver, are also examined in light of avant-gardism, cosmopolitanism, and migration. Narratives Unfolding is both a survey of current art historical approaches and their connection to the source: art-making and art experience happening somewhere.
