Developer's Digital Media Reference Curtis Poole, Janette Bradley, 2013-04-26 Designed for media professionals working across a broad range of formats, Developer's Digital Media Reference is an excellent reference guide for those keeping pace with this dynamic industry. As convergence between the World Wide Web, multimedia, and television production communities

continues, there is an increased demand for professionals to familiarize themselves with the many new delivery contexts, including hybrid DVD (where digital video content and computer data live on the same disc), interactive TV, and streaming media. Developer's Digital Media Reference covers essential technologies such as SVG (scalable vector graphics), SMIL (Synchronized Multimedia Integration Language, a markup language for creating animations on the web), MPEG-4 (compression standard for streaming audio/video), and Dynamic Web Applications. In addition to serving as a quick-look-up guide, this text is organized to explain today's major media: server-based architectures, disc-based architectures, distribution architectures, and merging/shared architectures. Each topic is discussed in terms of the technological background-evolution, current tools, and production tips and techniques.

Choosing and Using Audio and Music Software

Mike Collins, 2004-03-08 This comprehensive reference features all the major audio software: SONAR XL; Cubase SX; Logic Audio Platinum; Digital Performer; Nuendo; Pro Tools; Peak; Spark XL; SonicWorx; Audition (Cool Edit Pro); WaveLab; Sound Forge. If you need advice on which systems to purchase, which are most suitable for particular projects, and on moving between platforms mid-project, this book should be your one-stop reference. Mike Collins is a trainer and consultant who has been tackling these issues for years and his expert advice will save you time and money. Each section covers a specific system, providing a handy overview of its key features and benefits, including help with setup. Hints and Tips appear throughout these sections, addressing issues such as how to record drum loops using a virtual drum-machine, recording basslines and keyboard pads using virtual synthesizers, and adding strings, brass or other instruments using virtual samplers. Mike then illustrates how to convert these MIDI recordings into audio tracks to mix alongside vocals, guitars and any other real instruments. The many short tutorials provide both a source of comparison and means to get up to speed fast on any given software. Mike Collins is a music technology consultant and writer who has been making music in London's recording studios variously as a MIDI programmer, session musician, recording engineer, producer and arranger since 1981. He offers freelance Pro Tools engineering, consultancy, troubleshooting and personal tuition, as well as presenting seminars and lectures on related music technology and audio recording topics. Mike has written over 500 articles for magazines such as Macworld (UK), Pro Sound News Europe, Sound on Sound and AudioMedia, and for Electronic Musician and MIX

in the USA. Mike's wide-ranging career and experience enables him to bring excellent insight from all sides into his writing, from technical detail to creative expression. Starting out as a musician and club DJ in the 1970's, Mike moved into professional recording in the 1980's, initially as a Songwriter/Producer for EMI Records. Later he worked as a Songwriter for Chappell Music; as a Film Sound Consultant for Dolby Labs; as a Music Producer for TV recordings; and as Senior Recording Engineer and Music Technology Specialist at Yamaha's London R & D Studio. Throughout the 1990's Mike worked as a MIDI Programmer on records, films and music tours with bands such as the Shamen and film composers such as Ryuichi Sakamoto and David Arnold. Mike was Executive Consultant to Re-Pro (The Guild of Record Producers and Engineers) between 1996 and 1999 and Technical Consultant to the Music Producers Guild (MPG), contributing to the Education Group and organising and presenting Technical Seminars between 1999 and 2002. He has a BSc in Electroacoustics and an MSc in Music Information Technology.

Information Architecture Gerhard Schmitt, 1999 With increasing intensity, CAAD (Computer Aided Architectural Design) is determining the daily work of today's architectural offices. Computers allow complex designs to be visualized and altered with great speed and accuracy; three-dimensional models can be created with simulation and animation possibilities, and links to the World Wide Web provide access to a flow of information. The author develops his thesis that these aspects do not just enable the creative process to be optimized in a quantitative sense but also qualitatively. Alongside the spatial and time dimensions, the new electronic possibilities provide a fifth dimension in architecture.
