Ultraviolet Grasslands: 2E Luka Rejec,2023-02 Welcome to Ultraviolet Grasslands: 2E the roleplaying game of heroes on a strange trip through mythic steppes in search of lost time, broken space, and deep riffs.Ultraviolet Grasslands is a tabletop role-playing game book, half setting, half adventure, and half epic trip; inspired by psychedelic heavy metal, the Dying Earth genre, and classic Oregon Trail games. It leads a group of 'heroes' into the depths of a vast and mythic steppe filled with the detritus of time and space and fuzzy riffs.

Hydroecology and Ecohydrology Paul J. Wood,David M. Hannah,Jonathan P. Sadler,2008-02-28 This state-of-the-art, research level text considers the growing volume of research at the interface of hydrology and ecology and focuses on: the evolution of hydroecology / ecohydrology process understanding hydroecological interactions, dynamics and linkages methodological approaches detailed case studies future research needs The editors and contributors are internationally recognised experts in hydrology and ecology from institutions across North America, South America, Australia, and Europe. Chapters provide a broad geographical coverage and bridge the traditional subject divide between hydrology and ecology. The book considers a range of organisms (plants, invertebrates and fish), provides a long-term perspective on contemporary and palaeo-systems, and emphasises wider research implications with respect to environmental and water resource management. Hydroecology and Ecohydrology is an indispensable resource for academics and postgraduate researchers in departments of physical geography, earth sciences, environmental science, environmental management, civil engineering, water resource management, biology, zoology, botany and ecology. It is also of interest to professionals working within environmental consultancies, organizations and national agencies.

Landscape Theory in Design Susan Herrington,2016-12-08 Phenomenology, Materiality, Cybernetics, Palimpsest, Cyborgs, Landscape Urbanism, Typology, Semiotics, Deconstruction - the minefield of theoretical ideas that students must navigate today can be utterly confusing, and how do these theories translate to the design studio? Landscape Theory in Design introduces theoretical ideas to students without the use of jargon or an assumption of extensive knowledge in other fields, and in doing so, links these ideas to the processes of design. In five thematic chapters Susan Herrington explains: the theoretic groundings of the theory of philosophy, why it matters to design, an example of the theory in a work of landscape architecture from the twentieth and twenty-first centuries, debates surrounding the theory (particularly as they elaborate modern and postmodern thought) and primary readings that can be read as companions to her text. An extensive glossary of theoretical terms also adds a vital contribution to students' comprehension of theories relevant to the design of landscapes and gardens. Covering the design of over 40 landscape architects, architects, and designers in 111 distinct projects from 20 different countries, Landscape Theory in Design is essential reading for any student of the

landscape.

The Gulf of California Richard C. Brusca, 2010-04-15 Few places in the world can claim such a diversity of species as the Gulf of California (Sea of Cortez), with its 6,000 recorded animal species estimated to be half the number actually living in its waters. So rich are the Gulf's water that over a half-million tons of seafood are taken from them annually—and this figure does not count the wasted by-catch, which would triple or quadruple that tonnage. This timely book provides a benchmark for understanding the Gulf's extraordinary diversity, how it is threatened, and in what ways it is—nor should be—protected. In spite of its dazzling richness, most of the Gulf's coastline now harbors but a pale shadow of the diversity that existed just a half-century ago. Recommendations based on sound, careful science must guide Mexico in moving forward to protect the Gulf of California. This edited volume contains contributions by twenty-four Gulf of California experts, from both sides of the U.S.-Mexico border. From the origins of the Gulf to its physical and chemical characteristics, from urgently needed conservation alternatives for fisheries and the entire Gulf ecosystem to information about its invertebrates, fishes, cetaceans, and sea turtles, this thought-provoking book provides new insights and clear paths to achieve sustainable use solidly based on robust science. The interdisciplinary, international cooperation involved in creating this much-needed collection provides a model for achieving success in answering critically important questions about a precious but rapidly disappearing ecological treasure.

An Organic Architecture Frank Lloyd Wright, 2017 A reissue in the Frank Lloyd Wright 150th anniversary year of the series of lectures which the celebrated American architect gave in London in 1939 and which outline his core philosophy of 'organic architecture'. In May 1939, the celebrated American architect Frank Lloyd Wright visited London and gave four lectures at the Royal Institute of British Architects. The meetings were hailed at the time as the most remarkable events of recent architectural affairs in England, and the lectures were published as *An Organic Architecture* in September 1939 by Lund Humphries. The texts remain an important expression of the architect's core philosophy and are being reissued now in a new edition to commemorate the 150th anniversary in 2017 of Frank Lloyd Wright's birth. In the lectures, Frank Lloyd Wright discusses several of his recent projects, including his Usonian houses, his homes and studios at Taliesin, Wisconsin and Arizona, Fallingwater and the Johnson administration building. His charismatic, flamboyant character and hugely creative intelligence leap to life from the pages as he looks to the 'Future', both in terms of the then-imminent Second World War and his vision for cities. This new edition includes an insightful new essay by esteemed architectural historian, Professor Andrew Saint, which sets the lectures within context and highlights their continued resonance and appeal

The Imago Sequence Laird Barron, 2007-07-01 The title story of this collection — a devilishly ironic riff on H. P. Lovecraft's "Pickman's model" — was nominated for a World Fantasy Award, while "Probiscus" was nominated for an International Horror Guild award and reprinted in *The Year's Best Fantasy and Horror* 19. In addition to his previously published work, this collection contains an original story.

Engineering Geology F G Bell,2007-02-14 Every engineering structure, whether it's a building, bridge or road, is affected by the ground on which it is built. Geology is of fundamental importance when deciding on the location and design of all engineering works, and it is essential that engineers have a basic knowledge of the subject. Engineering Geology introduces the fundamentals of the discipline and ensures that engineers have a clear understanding of the processes at work, and how they will impact on what is to be built. Core areas such as stratigraphy, rock types, structures and geological processes are explained, and put in context. The basics of soil mechanics and the links between groundwater conditions and underlying geology are introduced. As well as the theoretical knowledge necessary, Professor Bell introduces the techniques that engineers will need to learn about and understand the geological conditions in which they intend to build. Site investigation techniques are detailed, and the risks and risk avoidance methods for dealing with different conditions are explained. * Accessible introduction to geology for engineers * Key points illustrated with diagrams and photographs * Teaches the impact of geology on the planning and design of structures

Diseases of Fruits and Vegetables S.A.M.H. Naqvi,2007-05-08 Among the Horticultural Crops, Fruits and Vegetables (FV) are of primary importance as the key source of essential components in an adequate and balanced human diet. FV have supported largely the daily food requirement of mankind since ages and even before man learned to grow cereal crops systematically. Over the years, growing FV has been the mainstay of rural economy and has emerged as an indispensable part of agriculture world over, offering farmers a wide range of crops in varied topography and climate. In certain parts of the world, FV are the major dietary staple. Apart from being a rich source of vitamins and minerals, this sector also contributes significantly in economy of the region or the nation. The increased income from per unit area of FV is far ahead and can not be compared with that of cereal crops. A recent survey by the Economist revealed that the world population has increased by 90 % in the past 40 years while food production has increased only by 25 % per head. With an additional 1.5 billion mouth to feed by 2020, farmers worldwide have to produce 39 % more. Looking at the load of the future food requirement, the global increased production of FV during last few years has absorbed the additional food requirement and accordingly the eating habits are also changing and shifting towards more consumption of these commodities worldwide.
