Author and Subject Indexes S. Böhme,Ute Esser,Professor Dr. Walter Fricke,Inge Heinrich,W. Hofmann,Dietlinde Krahn,D. Rosa,Dr. Lutz D. Schmadel,Gert Zech,2013-11-11 Astronomy and Astrophysics Abstracts, which has appeared in semi-annual volumes since 1969, is devoted to the recording, summarizing and indexing of astronomical publications throughout the world. According to a resolution adopted at the 14th General Assembly in 1970 it is prepared under the auspices of the International Astronomical Union. Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation in all fields of astronomy and astrophysics. It is due to the ever lasting increase of the bulk of material that the information content of our regular volumes is growing seriously. Therefore, the need for detailed index informations allowing the performance of retrospective literature searches becomes more and more important. Volume 23/24-the second General Index of Astronomy and Astrophysics Abstracts - contains author and subject indexes to volumes II -14 and, respectively, 17-22. Thus, the astronomical and astrophysical literature of the whole five-year period 1974 -1978 is covered by this volume. It is a pleasure to express our gratitude to Ms. Helga Ballmann, Ms. Monika Betz, Mr. Gernot Burkhardt, Ms. Lore Kiefert, Ms. Dagmar Roeder, Ms. Dimitra Roussou, and Mr. Werner Sanns for their kind support during the detailed preparation steps of the indexes.

TNFRSF Agonists: Mode of action and therapeutic opportunities Nataša Obermajer,Harald Wajant,Adam Zwolak,2023-12-04 The receptors of the TNFRSF (TNFRs) are of overwhelming importance in the regulation of the immune system but are also involved in the induction of apoptotic cell death or cell survival and proliferation, making them excellent therapeutic targets for cancer but also other diseases. TNFRSF members provide crucial co-stimulatory signals to many if not all immune effector cells. Each co-stimulatory TNFR has a distinct expression profile and a unique functional impact on various types of cells and at different stages of the immune response. For example, the two receptors of TNF, TNF receptor-1 (TNFR1) and TNF receptor-2 (TNFR2), regulate the interaction of the various types of immune cells and also the interplay of the latter with practically any type of non-hematopoietic cells; CD40 stimulates antigen-presenting cells; CD27, OX40, 41BB,GITR, HVEM and RANK costimulate T cells; BCMA, TACI, and Baffr regulate B-cell maturation; CD95 and the two death receptors of TRAIL contribute to tumor surveillance and Fn14, EDAR and XEDAR have been implicated in tissue regeneration and development. Correspondingly, exploiting TNFR-mediated signaling for the therapy of cancer but also of non-cancerous diseases is a major field of interest. A further application of TNFRSF signaling is the incorporation of the intracellular co-stimulatory domain of a TNFRSF receptor into so-called Chimeric Antigen Receptor (CAR) constructs for CAR-T cell therapy, the most prominent example of which is the 4-1BB co-stimulatory domain included in the clinically approved product Kymriah. The goal of this research topic is to provide concise overview of the recent advances in our understanding of agonists targeting TNFRSF and their potential therapeutic use, in particular in cancers. The focus of the series of research and review articles includes but is not limited to the biology of TNFRSF receptors in distinct immune cell populations, structure-function relationship of TNFRSF agonists, current preclinical and clinical knowledge of co-stimulatory TNFR agonists, opportunities for next generation TNFRSF therapeutics alone or in combination with immune checkpoint molecules. We encourage the submission of original research articles supported by pre-clinical data. Review articles will also be considered. Data should consist of anti-tumor activity analyses encompassing various murine or humanized mouse models, assessment of TNFRSF targeting in translational ex vivo primary human tumor tissue settings, or innovative single cell or spatial analysis of TNFRSF expression and association with tumor progression in patient material. Submissions should not be limited to the in vitro evaluation of TNFRSF signaling. We expect submissions based on (but not limited to): • TNFRSF signaling in shaping the immune contexture for anti-tumor immunity. • Engaging cytotoxic TNFRSF signaling to treat cancer. • Engaging TNFRSF signaling in non-cancerous diseases. • Immunobiology of TNFRSF receptors in specific immune cell populations, eg regulatory T cells (TNFR2, 41BB, TNFRSF25, ..), dendritic cells (CD40, RANK ...), NK cells ... • Critical aspects of TNFRSF structure-function and receptor clustering . • Balancing agonistic strength with FcγR affinity in the context of opportunities for next generation anti-TNFR antibodies with improved pharmacologic properties. • TNFRSF-based agonists with conditional or constitutive agonism. • Potential of simultaneous blockade of immune checkpoint molecules and co-stimulation of the TNFRSF in improving anti-tumor immunity. • Bispecific TNFR agonists. • anti-TNF-α agents in cancer immunotherapy. • Prominence and key features of TNFRSF members (4-1BB, OX40, CD27, CD40, HVEM, and GITR) as co-stimulatory domains in CAR-T cell therapy . • Current preclinical and clinical knowledge of co-stimulatory TNFR antibodies. Topic Editor Nataša Obermajer is a full time employee and shareholder of Janssen R&D, LLC, one of the Janssen Pharmaceutical Companies of Johnson & Johnson. Topic Editor Dr. Adam Zwolak is employed by Janssen R&D; The University of Würzburg has filed patent applications for TNFR2, Fn14 and CD40 agonists and bispecific anti-TNFR antibody formats with conditional activity with Dr. Harald Wajant as co-inventor. The University of Würzburg receives funding from Dyalix NV for the development of TNFR2 agonists

Author, Subject, and Object Indexes to Volumes 37-46. Literature 1984-1988 Heidelberg, FRG Astronomisches Recheninstitut,2013-06-29 From the reviews: Astronomy and Astrophysics Abstracts has appeared in semi-annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy, astrophysics and neighbouring sciences. It is the most important English-language abstracting journal in the mentioned branches. ...The abstracts are classified under more than a hundred subject categories, thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world. Space Science Review1Dividing the whole field plus related subjects into 108 categories, each work is numbered and most are accompanied by brief abstracts. Fairly comprehensive cross-referencing links relevant papers to more than one category, and exhaustive author and subject indices are to be found at the back, making the catalogues easy to use. The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes. Milletts and Sorghum Jagannath V. Patil,2017-03-06 Milletts and sorghum are extremely important crops in many developing nations and because of the ability of many of them to thrive in low-moisture situations they represent some exciting opportunities for further development to address the continuing and increasing impact of global temperature increase on the sustainability of the world's food crops. The main focus of this thorough new book is the potential for crop improvement through new and traditional methods, with the book's main chapters covering the following crops: sorghum, pearl millet, finger millet, foxtail millet, proso millet, little millet, barnyard millet, kodo millet, tef and fonio. Further chapters cover pests and diseases, nutritional and industrial importance, novel tools for improvement, and seed systems in milletts. Milletts and Sorghum provides full and comprehensive coverage of these crucially important crops, their biology, world status and potential for improvement, and is an essential purchase for crop and plant scientists, and food scientists and technologists throughout the developed and developing world. All libraries in universities and research establishment where biological and agricultural sciences are studied and taught should have copies of this important book on their shelves.
