Civil Avionics Systems Ian Moir, Allan Seabridge, Malcolm Jukes, 2013-10-14 Civil Avionics Systems, Second Edition, is an updated and in-depth practical guide to integrated avionic systems as applied to civil aircraft and this new edition has been expanded to include the latest developments in modern avionics. It describes avionic systems and potential developments in the field to help educate students and practitioners in the process of designing, building and operating modern aircraft in the contemporary aviation system. Integration is a predominant theme of this book, as aircraft systems are becoming more integrated and complex, but so is the economic, political and technical environment in which they operate. Key features: • Content is based on many years of practical industrial experience by the authors on a range of civil and military projects • Generates an understanding of the integration and interconnectedness of systems in modern complex aircraft • Updated contents in the light of latest applications • Substantial new material has been included in the areas of avionics technology, software and system safety The authors are all recognised experts in the field and between them have over 140 years' experience in the aircraft industry. Their direct and accessible style ensures that Civil Avionics Systems, Second Edition is a must-have guide to integrated avionic systems in modern aircraft for those in the aerospace industry and academia.

At Home in Space Ben Evans, 2011-09-28 This volume, like the others, not only focuses upon the individual missions within the decade but also upon key challenges facing human space exploration at specific points within those years - from the problems of simply breathing and eating in space to the challenges of venturing outside in a pressurized spacesuit, the development of newer and better space toilets, and the difficulties of locomotion on the Moon. The Eighties was a time when traveling into space far more commonplace. Examining in detail the American and Soviet fronts, Ben Evans gives a comprehensive analysis of the varying fortunes of the U.S. space shuttle in the Eighties, including its early test flights and commercial flights, its problems, the 51L tragedy and its aftermath, and the resumption of operations with STS-26. The U.S. story ends with STS-37 in April 1991. In the Soviet sphere, two pivotal space station efforts - Salyut 7 and its successor, Mir - are considered, showing how they were alike and different.

Cases, Materials and Text on Property Law Sjef van Erp,Bram Akkermans,2012-07-23 This casebook presents a deep comparative analysis of property law systems in Europe (ie the law of immovables, movables and claims), offering signposts and stepping stones for the reader wishing to explore this fascinating area. The subject matter is explained with careful attention given to its history, foundations, thought-patterns, underlying principles and basic concepts. The casebook focuses on uncovering differences and similarities between Europe's major legal systems: French, German, Dutch and English law are examined, while Austrian and Belgian law are also touched upon. The book combines excerpts from primary source materials (case law and legislation) and from doctrine and soft law. In doing so it presents a faithful picture of the systems concerned. Separate chapters deal with the various types of property rights, their creation, transfer and destruction, with security rights (such as mortgages, pledges, retention of title) as well as with harmonising and unifying efforts at the EU and global level. Through the functional approach taken by the *Ius Commune Casebooks* this volume clearly demonstrates that traditional comparative insights no longer hold. The law of property used to be regarded as a product of historical developments and political ideology, which were considered to be almost set in stone and assumed to render any substantial form of harmonisation or approximation very unlikely. Even experienced comparative lawyers considered the divide between common law and civil law to be so deep that no common ground - so it was thought - could be found. However economic integration, in particular integration of financial markets and freedom of establishment, has led to the integration of particular areas of property law such as mortgage law and enforceable security instruments (eg retention of title). This pressure towards integration has led comparative lawyers to refocus their interest from contract, tort and unjustified enrichment to property law and delve beneath its surface. This book reveals that today property law systems are closer to one another than previously assumed, that common ground can be found and that differences can be analysed in a new light to enable comparison and further the development of property law in Europe.
