Andrew Coulson

The Manhattan Project Jeff A. Hughes,2003 Launched in 1942, the Manhattan Project was a well-funded, secret effort by the United States, the United Kingdom, and Canada to develop an atomic bomb before the Nazis. The results--the bombs named Little Boy and Fat Man--were dropped on Hiroshima and Nagasaki in August of 1945. A vast state within a state, the Manhattan Project employed 130,000 people and cost the United States and its allies 2 billion dollars, but its contribution to science as a prestigious investment was invaluable. After the bombs were dropped, states began allocating unprecedented funds for scientific research, leading to the establishment of many of twentieth century's major research institutions. Yet the union of science, industry, and the military did not start with the development of the atomic bomb; World War II only deepened the relationship. This absorbing history revisits the interactions among science, the national interest, and public and private funding that was initiated in World War I and flourished in WWII. It then follows the Manhattan Project from inception to dissolution, describing the primary influences that helped execute the world's first successful plan for nuclear research and tracing the lineages of modern national nuclear agencies back to their source.

Roll Design and Mill Layout Ross E. Beynon,1956

British Iron and Steel Colin Bodsworth,2001 Several books have been published which describe the evolution and growth of the British iron and steel industry. Most of these provide accounts of the developments in manufacturing methods that have taken place. Some also discuss the products. Only limited reference is usually made, however, to the reasons why the changes were made or to the progressive evolution of the underlying scientific understanding that has transformed the modern approach to the design and operation of processes and to product development. There is no comprehensive coverage of the vast changes that have transformed the industry during the second half of the twentieth century.

Keywen ,

E-Business Essentials Nick Bontis,2004-09-01 This special issue of QJEC marks the final instalment of the journal. The QJEC has had a long-standing history of international scholarship focused on the emerging field of electronic commerce with a broad, interdisciplinary approach. It has established the field's intellectual foundation with state-of-the-art research from business, computer science, engineering, law, psychology, and sociology. This particular issue focuses on an eclectic group of papers that are international in scope with authors from Canada, Australia, France, Germany, South Africa and Italy. The papers range in topics from valuing dot com companies, to mobile health and portals, to supply chain management.

Industrial Research in Britain Francis Hodgson,1972

Timken Bettye Hobbs Pruitt,1998 The hundred-year history of The Timken Company is one of the great success stories of U.S. manufacturing. More than just a chronicle of the company's growth in two key industries, bearings and steel, this absorbing account examines the factors that have sustained it through dramatic changes in the business environment.

Americanization and Its Limits Jonathan Zeitlin,Gary Herrigel,2004 An analysis of Americanization in European and Japanese industry after World War II. The contributors analyze the creative role of local actors in selectively adapting US technology and management methods to suit local conditions, and in creating hybrid forms combining foreign and indigenous practices in unforeseen, yet remarkably competitive ways.

From Machine Shop to Industrial Laboratory Paul Israel,1992 The field of telegraphy, Israel explains, offers a primary example of this transition. Although telegraphy is usually perceived as a high-tech industry relying on input from science, its technical development was most strongly influenced by the mechanical shop tradition that dominated American invention. As telegraphy progressed, however, growing corporate control of invention created new patterns in the telegraphic shop tradition that would, in turn, be developed more fully in the electrical industries of telephony and electric lighting.

Tanzania Andrew Coulson,2013-07-25 This book gives an account of the political economy of Tanzania, from pre-colonial times to the present. It shows the strengths and weaknesses of Julius Nyerere, the leader who brought the country to Independence in 1961. A new introductory chapter sets the book in context and discusses current issues such as natural resources.

The Human Factor in Changing Africa Melville J. Herskovits,2013-11-05 Focussing on the problems of change and resistance to change that mark the African sub-continent, this book examines Africa's place in the world from earliest times. It considers the nature of its peoples in their prehistoric development, the ways in which their cultures were oriented, and the ways in which these cultures guided their reactions to European ideas. It also assesses the human responses to industrial, technological and economic changes and the re-discovery by the Africans of African culture. Originally published in 1962.
