Transfer Pricing in Manufacturing Ioana Ignat,Liliana Ionescu-Feleagă,2022-05-09 Transfer pricing is considered a new and complex concept in terms of guidelines and regulations. In this context, more and more academics and tax professionals are interested in understanding the mechanism of a transfer pricing analysis. The main objective of the book is to help them in this process by presenting in a practical approach (using case studies and schemes) and in accordance with the OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations the way in which are operating the basic transfer pricing elements. Moreover, considering that the manufacturing sector is the chief wealth-producing sector of the global economy, the book illustrates complete transfer pricing analyses applicable for manufacturing transactions (using Orbis database). In the end, the book presents some recent disputes between manufacturing entities and tax authorities in relation to the transfer pricing analysis for manufacturing transactions. Advances in Computational Multibody Systems Jorge A.C. Ambrósio, 2006-03-30 Among all the fields in solid mechanics the methodologies associated to multibody dynamics are probably those that provide a better framework to aggregate different disciplines. This idea is clearly reflected in the multidisciplinary applications in biomechanics that use multibody dynamics to describe the motion of the biological entities, or in finite elements where the multibody dynamics provides powerful tools to describe large motion and kinematic restrictions between system components, or in system control for which multibody dynamics are the prime form of describing the systems under analysis, or even in applications with fluid-structures interaction or aeroelasticity. This book contains revised and enlarged versions of selected communications presented at the ECCOMAS Thematic Conference in Multibody Dynamics 2003 that took place in Lisbon, Portugal, which have been enhanced in their self-containment and tutorial aspects by the authors. The result is a comprehensive text that constitutes a valuable reference for researchers and design engineers and helps to appraise the potential of application of multibody dynamics to a wide range of scientific and engineering areas of relevance.

Empirical Methods in Natural Language Generation Emiel Krahmer, Mariet Theune, 2010-09-09 Natural language generation (NLG) is a subfield of natural language processing (NLP) that is often characterized as the study of automatically

converting non-linguistic representations (e.g., from databases or other knowledge sources) into coherent natural language text. In recent years the field has evolved substantially. Perhaps the most important new development is the current emphasis on data-oriented methods and empirical evaluation. Progress in related areas such as machine translation, dialogue system design and automatic text summarization and the resulting awareness of the importance of language generation, the increasing availability of suitable corpora in recent years, and the organization of shared tasks for NLG, where different teams of researchers develop and evaluate their algorithms on a shared, held out data set have had a considerable impact on the field, and this book offers the first comprehensive overview of recent empirically oriented NLG research.
