Behavioral Neurobiology of Psychedelic Drugs Adam L. Halberstadt, Franz X. Vollenweider, David E. Nichols, 2018-03-27 This volume brings together the latest basic and clinical research examining the effects and underlying mechanisms of psychedelic drugs. Examples of drugs within this group include LSD, psilocybin, and mescaline. Despite their structural differences, these compounds produce remarkably similar experiences in humans and share a common mechanism of action. Commonalities among the substances in this family are addressed both at the clinical and phenomenological level and at the basic neurobiological mechanism level. To the extent possible, contributions relate the clinical and preclinical findings to one another across species. The volume addresses both the risks associated with the use of these drugs and the potential medical benefits that might be associated with these and related compounds.

**Handbook of Consultation-Liaison Psychiatry** Hoyle Leigh, Jon Streltzer, 2014-12-08 This updated resource refines and expands on both the core concepts and the real-world practice of consultation-liaison psychiatry in medical settings. New and revised chapters provide background and basics and describe CL psychiatry approaches to managing a wide array of common conditions, including heart disease, dementia, anxiety and depressive disorders, alcohol and substance use problems, and chronic pain. Besides the fine points of practice in varied chronic and acute care settings, specific patient populations such as children, elders, ob/gyn patients, and the immunocompromised are discussed. The latest information and insights on pharmacology, interviewing, and ethical and cultural issues round out the book's highly accessible coverage. A sampling of topics in the Handbook: Basic foundations of diagnosis, psychiatric diagnosis, and final common pathway syndromes. An integrative care model of psychiatry in the primary care setting. Patient personality, personality types and traits, and disorders. The chronic patient and the palliative care setting. Trauma- and stressor-related disorders. Somatic symptoms and related disorders. The Second Edition of the Handbook of Consultation-Liaison Psychiatry ably follows its predecessor by presenting the diverse state of the specialty to enhance the work of psychiatrists, clinical psychologists, and primary care physicians.

**Models, Mysteries, and Magic of Molecules** Jan C. A. Boeyens, J.F. Ogilvie, 2008-03-11 The Indaba 5 meeting, held in South Africa during August 2006, examined the progress being made to achieve first-principle understanding of molecular science and confirmed the need to better understand the mysteries and magic of molecules. This book explores the common ground to guide chemists, biologists, crystallographers, spectroscopists and theorists towards painting a holistic picture of scientific endeavor.

Optimization and Applicability of Bioprocesses Hemant J. Purohit, Vipin Chandra Kalia, Atul N. Vaidya, Anshuman A. Khardenavis, 2018-12-12 This book argues that the sustainable management of resources requires a systematic approach that primarily involves the integration of green innovative biotechnological strategies and eco-engineering. It discusses how microbial community intelligence can be used for waste management and bio-remediation and explains how biological processes can be optimized by integrating genomics tools to provide perspectives on sustainable development. The book describes the application of modern molecular techniques such as fluorescence in situ hybridization (FISH), highly sensitive catalyzed reporter deposition (CARD)-FISH, in situ DNA-hybridization chain reaction (HCR) and methods for detecting mRNA and/or functional genes to optimize bioprocesses. These techniques, supplemented with metagenomic analysis, reveal that a large proportion of micro-organisms still remain to be identified and also that they play a vital role in establishing bioprocesses.

**Semiconducting Polymers** Georges Hadziioannou, George G. Malliaras, 2007 The field of semiconducting polymers has attracted many researchers from a diversity of disciplines. Printed circuitry, flexible electronics and displays are already migrating from laboratory successes to commercial applications, but even now fundamental knowledge is deficient concerning some of the basic phenomena that so markedly influence a device's usefulness and competitiveness. This two-volume handbook describes the various approaches to doped and undoped semiconducting polymers taken with the aim to provide vital understanding of how to control the properties of these fascinating organic materials. Prominent researchers from the fields of synthetic chemistry, physical chemistry, engineering, computational chemistry, theoretical physics, and applied physics cover all aspects from compounds to devices. Since the first edition was published in 2000, significant findings and successes have been achieved in the field, and especially handheld electronic gadgets have become billion-dollar markets that promise a fertile application ground for flexible, lighter and disposable alternatives to classic silicon circuitry. The second edition brings readers up-to-date on cutting edge research in this field.--Publisher's description.

**Guide to Ministering to Alzheimer's Patients and Their Families** Pat Otwell, 2008-05-19 Learn how to develop an effective Alzheimer's ministry. The Guide to Ministering to Alzheimer's Patients and Their Families examines the importance of spirituality in dealing with the everyday challenges of this mysterious disease. Not a "how-to" manual with step-by-step instructions or tried and true formulas, this unique book instead examines the essential elements of ministering to dementia patients based on the first-hand accounts of family members living through pain and uncertainty. The book explores the stages of Alzheimer's, grief and guilt, available resources, and implications of spiritual care for patients and families. It is equally useful as a textbook for graduate and undergraduate work, a reference for study groups and seminars, and a primer for those with limited knowledge of the illness. Ministers sometimes neglect Alzheimer's patients and their families because they feel they don't know what to say or do even though they want to be obedient and faithful servants in this specialized ministry. The Guide to Ministering to Alzheimer's Patients and Their Families communicates the thoughts, feelings, and needs of those affected by the disease to help ministers feel more comfortable, confident, and competent as they develop a theological understanding of God, Alzheimer's patients, and their role in ministry. The book also provides models for ministry; role-play scenarios; a sample text for a care facility worship service, a care facility memorial service, and a funeral service for a Christian and a non-Christian as well as a sample clergy seminar program on Alzheimer's ministry. The Guide to Ministering to Alzheimer's Patients and Their Families examines: common characteristics of early, mild, moderate, and severe Alzheimer's general information about Alzheimer's ethical decision-making support group ministry respite care religious rites faith issues heredity hospitalization of Alzheimer's patients long-distance caregiving working with other clergy The Guide to Ministering to Alzheimer's Patients and Their Families also includes a special appendix of selections from the Scriptures. This book is a unique resource for all Christians who desire to minister to those affected by Alzheimer's—especially pastors, priests, chaplains, pastoral counselors, church leaders, healthcare professionals, and seminary students.

**A History of Economic Thought** William J. Barber, 2021-02-08 This critical study of the development of systematic economic ideas explores them in both historical and contemporary contexts. Many of the issues that faced economists in the past are still with us. The theories and methods of such men as Adam Smith, T. R. Malthus, David Ricardo, J.S. Mill, Karl Marx, Alfred Marshall, and J. M. Keynes are often relevant to us today. As the Great Recession taught us in the first decade of the twenty-first century, the history of economic thought can have wide-ranging practical applications. In this volume, Professor William J. Barber assesses the thought of a number of important economists both in terms of the issues of their day and in relation to modern economic thought. By concentrating on the greatest exponents, he highlights the central properties of the four main schools of economic thought—classical, Marxian, neo-classical, and Keynesian—and shows that although each of these traditions is rooted in a different stage of economic development, they can all provide insights into the recurring problems of modern economics.

**Photoactive Materials** Pierre-Alexandre Blanche, 2021-07-26 This book presents a collection of 13 original research articles that focus on the science of light-matter interaction. This area of science has been led to some the greatest accomplishments of the past 100 years, with the discovery of materials that perform useful operations by collecting light or generating light from an outside stimulus. These materials are at the center of a multitude of technologies that have permeated our daily life; every day we rely on quantum well lasers for telecommunication, organic light emitting diodes for our displays, complementary metal-oxide-semiconductors for our camera detectors, and of course a plethora of new photovoltaic cells that harvest sunlight to satisfy our energy needs. In this book, top-rated researchers present their latest findings in the field of nano-particles, plasmonics, semi-conductors, magneto-optics, and holography.

*Microbial Factories* Vipin Chandra Kalia, 2016-02-16 This book highlights the efforts made by distinguished scientific researchers world-wide to meet two key challenges: i) the limited reserves of polluting fossil fuels, and ii) the ever-increasing amounts of waste being generated. These case studies have brought to the foreground certain innovative biological solutions to real-life problems we now face on a global scale: environmental pollution and its role in deteriorating human health. The book also highlights major advances in microbial metabolisms, which can be used to produce bioenergy, biopolymers, bioactive molecules, enzymes, etc. Around the world, countries like China, Germany, France, Sweden and the US are now implementing major national programs for the production of biofuels. The book provides information on how to meet the chief technical challenges - identifying an industrially robust microbe and cheap raw material as feed. Of the various possibilities for generating bioenergy, the most attractive is the microbial production of biohydrogen, which has recently gained significant recognition worldwide, due to its high efficiency and eco-friendly nature. Further, the book highlights factors that can make these bioprocesses more economical, especially the cost of the feed. The anaerobic digestion (AD) process is more advantageous in comparison to aerobic processes for stabilizing biowastes and producing biofuels (hydrogen, biodiesel, 1,3-propanediol, methane, electricity), biopolymers (polyhydroxyalkanoates, cellulose, exopolysaccharides) and bioactive molecules (such as enzymes, volatile fatty acids, sugars, toxins, etc.) for biotechnological and medical applications. Information is provided on how the advent of molecular biological techniques can provide greater insights into novel microbial lineages. Bioinformatic tools and metagenomic techniques have extended the limits to which these biological processes can be exploited to improve human welfare. A new dimension to these scientific works has been added by the emergence of synthetic biology. The Big Question is: How can these Microbial Factories be improved through metabolic engineering and what cost targets need to be met?

**Frontiers in Memristive Materials for Neuromorphic Processing Applications** National Academies of Sciences Engineering and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Condensed Matter and Materials Research Committee, 2021-09-22 Current von Neumann style computing is energy inefficient and bandwidth limited as information is physically shuttled via electrons between processor, short term non-volatile memory, and long-term storage. Biologically inspired neuromorphic computing, with its inherent autonomous learning capabilities and much lower power requirements based on analog processing, is seen as an avenue for overcoming these limitations. The development of nanoelectronic memory resistors, or memristors, is essential to neuromorphic architectures as they allow logic-based elements for information processing to be combined directly with nonvolatile memory for efficient emulation of neurons and synapses found in the brain. Memristors are typically composed of a switchable material with nonlinear hysteretic behavior sandwiched between two conducting encoding elements. The design, dynamic control, scaling and fundamental understanding of these materials is essential for establishing memristive devices. To explore the state-of-the-art in the materials fundamentally underlying memristor technologies: their science, their mechanisms and their functional imperatives to realize neuromorphic computing machines, the National Academies of Sciences, Engineering, and Medicine's Board on Physics and Astronomy convened a workshop on February 28, 2020. This publication summarizes the presentation and discussion of the workshop.

Quorum Sensing vs Quorum Quenching: A Battle with No End in Sight Vipin Chandra Kalia, 2016-08-23 Microbial relationships with all life forms can be as free living, symbiotic or pathogenic. Human beings harbor 10 times more microbial cells than their own. Bacteria are found on the skin surface, in the gut and other body parts. Bacteria causing diseases are the most worrisome. Most of the infectious diseases are caused by bacterial pathogens with an ability to form biofilm. Bacteria within the biofilm are up to 1000 times more resistant to antibiotics. This has taken a more serious turn with the evolution of multiple drug resistant bacteria. Health Departments are making efforts to reduce high mortality and morbidity in man caused by them. Bacterial Quorum sensing (QS), a cell density dependent phenomenon is responsible for a wide range of expressions such as pathogenesis, biofilm formation, competence, sporulation, nitrogen fixation, etc. Majority of these organisms that are important for medical, agriculture, aquaculture, water treatment and remediation, archaeological departments are: *Aeromonas*, *Acinetobacter*, *Bacillus*, *Clostridia*, *Enterococcus*, *Pseudomonas*, *Vibrio* and *Yersinia* spp. Biosensors and models have been developed to detect QS systems. Strategies for inhibiting QS system through natural and synthetic compounds have been presented here. The biotechnological applications of QS inhibitors (QSIs) in diverse areas have also been dealt with. Although QSIs do not affect growth and are less likely to impose selective pressure on bacteria, however, a few reports have raised doubts on the fate of QSIs. This book addresses a few questions. Will bacteria develop mechanisms to evade QSIs? Are we watching yet another defeat at the hands of bacteria? Or will we be acting intelligently and survive the onslaughts of this Never Ending battle?
