*Cutaneous Malignancy of the Head and Neck* Randal Weber, Brian A. Moore, 2011-08-19 For the first time, a true multidisciplinary approach to cutaneous malignancy of the head and neck is presented, as international experts in head and neck surgical oncology, dermatology, Mohs micrographic surgery, plastic and reconstructive surgery, radiation oncology, and medical oncology present state-of-the-art techniques and promising horizons in the treatment of cutaneous malignancy of the head and neck. Whether in primary care or a specialty practice, this text should prove invaluable to any practitioner who treats patients with skin cancer of the head and neck. This is the only textbook on this subject that comprehensively addresses patient management - from diagnosis, treatment (in all forms, including chemotherapy and radiation), and reconstruction. This book makes preparation for actual patient care or presentations simpler and easier; currently, someone wanting to study this field would have to get articles, a head and neck surgery text, and a facial plastic/reconstruction text to gather all the information that is presented here. This book is suitable for ENT surgeons, plastic surgeons, general surgical oncologists, dermatologists, and even radiation/medical oncologists in endemic areas who treat patients with aggressive cutaneous malignancies. Each chapter has information that will be valuable to both seasoned practitioners and residents in training.

**Basic Analytical Chemistry** L. Pataki, E. Zapp, 2013-10-22 Pergamon Series in Analytical Chemistry, Volume 2: Basic Analytical Chemistry brings together numerous studies of the vast expansion in the use of classical and instrumental methods of analysis. This book is composed of six chapters. After providing a theoretical background of analytical chemistry, this book goes on dealing with the fundamental principles of chemical equilibria in solution. The subsequent chapters consider the advances in qualitative and quantitative chemical analyses. These chapters present a unified view of these analyses based on the Bronsted-Lowry theory and the donor-acceptor principle. These topics are followed by discussions on instrumental analysis using various methods, including electrochemical, optical, spectroscopic, and thermal methods, as well as radioactive isotopes. The final chapters examine the separation methods and the essential features of organic chemical analysis that are different from methods for inorganic compounds. This book is of value to analytical chemists and researchers.

**Database and Expert Systems Applications** Trevor Bench-Capon,Giovanni Soda,A Min Tjoa,2003-07-31 The Database and Expert Systems Applications (DEXA) conferences bring together researchers and practitioners from all over the world to exchange ideas, experiences and opinions in a friendly and stimulating environment. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field, and all aspects of database, knowledge base and related technologies and their applications are represented. Once again there were a good number of submissions: 241 papers were submitted and of these the programme committee selected 103 to be presented. DEXA’99 took place in Florence and was the tenth conference in the series, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this conference, namely: • University of Florence, Italy • IDG CNR, Italy • FAW – University of Linz, Austria • Austrian Computer Society • DEXA Association In addition, we must thank all the people who have contributed their time and effort to make the conference possible. *Fabrication of Complex Optical Components* Ekkard Brinksmeier,Oltmann Riemer,Ralf M. Gläbe,2012-09-14 High quality optical components for consumer products made of glass and plastic are mostly fabricated by replication. This highly developed production technology requires several consecutive, well-matched processing steps called a process chain covering all steps from mold design, advanced machining and coating of molds, up to the actual replication and final precision measurement of the quality of the optical components. Current market demands for leading edge optical applications require high precision and cost effective parts in large volumes. For meeting these demands it is necessary to develop high quality process chains and moreover, to crosslink all demands and interdependencies within these process chains. The Transregional Collaborative Research Center Process chains for the replication of complex optical elements at Bremen, Aachen and Stillwater worked extensively and thoroughly in this field from 2001 to 2012. This volume will present the latest scientific results for the complete process chain giving a profound insight into present-day high-tech production.
