Shape Up! David A. Adler, 1998-01-01 A hands-on introduction to polygons that takes the fear out of math and puts the fun back in! Draw three dots on a piece of paper. Or maybe-- draw three dots on a slice of cheese. What happens when you connect the dots? With bright, colorful illustrations and a simple, funny text, Shape Up! introduces triangles, quadrangles, and other polygons to young readers, encouraging them to play along, and learn everything there is to know about shapes. Explaining basic geometric concepts and offering definitions for important vocabulary, this introduction to shapes, lines, and angles is too good to miss-- even if the jokes can be a little . . . cheesy. Created by a respected children's nonfiction author and former math teacher, this is a perfect grounding in basic shapes-- and a lot of fun, too.

*The Shape of Algebra in the Mirrors of Mathematics* Gabriel Katz,Vladimir Nodelman,2012 The Shape of Algebra is the authors' attempt to share their mathematical experiences with readers who have more than a passing interest in mathematics, but have only a traditional exposure to elementary algebra. Secondary school and college teachers and students who want to expand their horizons in the field will find a fresh presentation of familiar concepts and some unexpected results. This book serves as a text for an appreciation course in modern mathematics designed for non-mathematics majors or for first-year students who are considering the possibility of studying mathematics or related disciplines. It can also serve as a source of computer-supported activities that could supplement traditional courses in algebra, multivariable calculus, and complex variable. This book gives the reader a sense of the visual nature of mathematics. Mathematical experiments with universal mapping software VisuMatica, designed by Vladimir Nodel'man, form the very core of the book. Readers are encouraged to reproduce, play with, and expand on these experiments. Numerous problems are interspersed throughout the text to guide the reader. Our treatment of standard algebra is visual and computational. By introducing visual computational environments like VisuMatica, our book promotes this geometric approach to algebra and makes it accessible to readers a great deal earlier. The book will enable our readers to approach its content on three levels: the first one which requires only some fluency with elementary algebraic manipulations; the second one which also presumes familiarity with the notions of derivatives and tangent lines to plane curves, and the third one which uses some basic concepts of multivariable calculus. All three levels are clearly marked in the text, and will allow for a smooth reading and virtual experiments, regardless of the level that our readers will find comfortable.

**Mathematical Mindsets** Jo Boaler, 2015-10-12 Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

**Best Strategies for Pre-Algebra with Basic Algebra** Alco Mathematic Tutorial Series, 2016-04-21 This textbook is designed around the philosophy that students do better in math and science if they have a real perception of the fundamental concepts of mathematics. The content within this textbook first places an emphasis on developing a strategy for solving math problems which will mentally lead the problem solver towards a solution. Secondly, this text encourages the problem solver to visualize images such as charts, graphs, sketches or models to support that strategy. These steps encourage a student to think their way through each problem so they will understand the concepts rather than to make an attempt to memorize a way to get an answer. Successful math students understand the concepts while other students attempt to memorize and duplicate. This text encourages students to develop an understanding approach to problem solving as they solve more than 1100 progressively challenging problems. Best Strategies for Pre-Algebra with Basic Algebra is written in a concise and sequential manner that will promote student interest and efficiency. This text demonstrates the necessary fundamentals taught in Pre-Algebra and it also includes two additional chapters of Algebra, which emphasizes the use of variables, as well as, graphing, writing, and solving linear equations.
