**Resource Allocation in Next Generation Wireless Networks** Wayne Li, Yi Pan, 2006 Next generation wireless and mobile communication systems are rapidly evolving to satisfy the demands of various network users. Due to the great success and enormous impact of IP networks, high-speed transmission is now possible for both indoor and outdoor wireless systems, internet access and web browsing have become the ruling paradigm for next generation system. It is envisioned that new generation wireless networks and hand-held terminals will support a wide variety of multimedia services such as multimedia web browsing, video and news on demand, mobile office system, stock market information, and so on, to mobile users anywhere, anytime in an uninterrupted and seamless way with low-powered handsets. The characteristics of wireless links, as well as the desire to maintain connectivity while on the move, offer significant challenges to provisioning quality of service and the related performance is of central interest. Since the resources (such as time, frequency and code) in the wireless segments of such networks are very limited, over-dimensioning the network resource is equivalent to poor capital investment, while congestion at busy hours could mean lost calls and lost revenues. It is therefore critical for wireless network designers to utilise these resources efficiently and effectively. In response to the above demand

for next generation wireless and mobile communication systems, this book aims at providing a timely and concise reference of the current activities and findings in the relevant technical fields. The primary goal is to address the key technical issues pertaining to the integrated new systems and present novel technical contributions. The book contains 14 invited chapters from prominent researchers working in this area around the world.

*Activity-Based Cost and Environmental Management* Jan Emblemsvåg, Bert Bras, 2012-12-06 It is clear that our environment is changing, and not for the better. Companies cannot ignore environmental

issues anymore. Public awareness is growing, legislation is tightening, and demand for ISO 14000 compliance is rising. For many, however, the field of environmental management (including ISO 14000) is full of unfamiliar terms, high learning curves, unproductive approaches, much frustration, and often little action. If environmental management is to become widely accepted and self-motivated in industry, it must connect to the basic motivators for business: increased competitiveness and profitability. Activity-Based Cost And Environmental Management: A Different Approach to the ISO 14000 Compliance demonstrates how environmental assessment and management can be performed based upon familiar principles: cost accounting and cost management. Specifically, this book describes how the well-established Activity-Based Costing and Management principles can be extended with non-monetary environmental dimensions. The result is a single, integrated framework called Activity-Based Cost and Environmental Management that provides the tools and abilities to do both environmental management and cost management in an integrated manner and according to modern management principles. This integration of economic and environmental dimensions based upon familiar cost accounting and management principles makes it easier for decision-makers to not only include the environment in their decision-making, but also to identify, rank and prioritize opportunities for win-win situations where competitiveness is increased and environmental impact reduced at the same time. In this book, the basic concepts of

Activity-Based Cost and Environmental Management are described, as well as how to make your own integrated Activity-Based Cost and Environmental Management implementations and how to get the most out of them using uncertainty distributions, Monte Carlo simulations, and sensitivity charts. Among others, the book includes chapters on environmental management and Activity-Based Costing, as well as several real-life case studies from companies for which the authors implemented Activity-Based Cost and Environmental Management systems.
