**Annual Review in Automatic Programming** Richard Goodman,2014-05-15 Annual Review in Automatic Programming is a collection of papers presented at the Working Conference on Automatic Programming of Digital Computers held in Brighton, UK, on April 1-3, 1959. Contributors focus

on developments in automatic programming and cover topics ranging from automatic coding for TREAC to the PEGASUS and MERCURY autocodes, automatic programming of DEUCE, and the philosophy of programming. Business applications of automatic programming are also discussed. This book is comprised of 17 chapters and begins with a review of future trends in automatic programming, focusing on the environment of a computer as well as machine languages and automatic codes. The features of existing automatic programming languages are also described, along with the advantages and disadvantages of such languages. The next chapter presents some of the arguments in favor of standardized notations for programming, mainly with reference to scientific problems. The reader is also introduced to the Mark 5 system of automatic coding for TREAC; assembly, interpretive, and conversion programs for PEGASUS; and application of formula translation to the automatic coding of ordinary differential equations. The final chapter describes a machine designed for the manufacture of accurate models for wind tunnel tests. This monograph will be of interest to computer programmers, computer manufacturers, computer users, and university students.

**Enterprise Growth Strategy** Dharendra Kumar, 2016-05-06 Even during economic downturns businesses have to grow to survive and compete in domestic and international markets. There is always a need to plan for future growth. Enterprise Growth Strategy presents the total process of a growth strategy. Dr Kumar is an engineer who entered the academic world following a long career in manufacturing business and has since taught almost every aspect of business and management. The 'growth strategy' concept he has developed is comprehensive and manifestly practical. Dr Kumar describes mechanisms by which businesses can gain market share; develop, modify, or upgrade products; acquire new or expand existing businesses; transform resources to increase revenue and profitability; reduce cycle time; and empower business associates. Quality concepts - market growth, financial and core competency - are outlined and a variety of growth strategy tools presented. The relationship between continuous improvement metrics and business growth metrics is explained and their relevance to financial performance examined. Examples and case studies are presented to illustrate how different business areas such as Sales and Marketing; Product Development; Operations; Support Services; and the Finance function, contribute. Leadership responsibilities, employee participation in the execution of growth strategy, culture and change issues are also discussed. Business leaders, managers and consultants, academics and teachers, as well as higher level students on business-related courses will find enormous value in this book. It is unusual, if not unique, in presenting the total process from vision to mission, to development of a growth strategy, implementation of initiatives, use of tools, and measurement of both operational and financial outcomes.
