A Practical Introduction to Hardware/Software Codesign Patrick R. Schaumont, 2010-09-09 This is a practical book for computer engineers who want to understand or implement hardware/software systems. It focuses on problems that require one to combine hardware design with software design – such problems can be solved with hardware/software codesign. When used properly, hardware/software co-design works better than hardware design or software design alone: it can improve the overall performance of digital systems, and it can shorten their design time. Hardware/software codesign can help a designer to make trade-offs between the flexibility and the performance of a digital system. To achieve this, a designer needs to combine two radically different ways of design: the sequential way of decomposition in time, using software, with the parallel way of decomposition in space, using hardware. **Intended Audience** This book assumes that you have a basic understanding of hardware that you are familiar with standard digital hardware components such as registers, logic gates, and components such as multiplexers and arithmetic operators. The book also assumes that you know how to write a program in C. These topics are usually covered in an introductory course on computer engineering or in a combination of courses on digital design and software engineering.

Textbook of Stroke Medicine Michael Brainin, Wolf-Dieter Heiss, 2014-09-11 This concise and informative Textbook of Stroke Medicine is aimed at doctors preparing to specialize in stroke care and strokeologists looking for concise but in-depth scientific guidance on stroke management. Its practical approach covers all important issues of prevention, diagnosis, and treatment of cerebrovascular diseases. Dedicated chapters give a thorough review of all clinical issues. Fully revised throughout, the new edition has expanded sections on topics of rising practical importance, such as diagnostic imaging, stroke unit management, monitoring and management of complications including infections, recommendations for thrombolysis, interventions and neurosurgical procedures, and clear and balanced recommendations for secondary prevention. Neuropsychological syndromes are explained and an up-to-date view on neurorehabilitation is presented. The authors are all experts in their field and many of them have been working together in a teaching faculty for the European Master in Stroke Medicine Programme, which is supported by the European Stroke Organization.

Digital and Analog Communication Systems Leon W. Couch, 1983 For second and third year introductory communication systems courses for undergraduates, or an introductory graduate course. This revision of Couch's authoritative text provides the latest treatment of digital communication systems. The author balances coverage of both digital and analog communication systems, with an emphasis on design. Students will gain a working knowledge of both classical mathematical and personal computer methods to analyze, design, and simulate modern communication systems. MATLAB is integrated throughout.

Multiscale Problems in the Life Sciences Jacek Banasiak, Vincenzo Capasso, Mirosław Lachowicz, Jacek Miekisz, 2008-04-08 The aim of this volume that presents lectures given at a joint CIME and Banach Center Summer School, is to offer a broad presentation of a class of updated methods providing a mathematical framework for the development of a hierarchy of models of complex systems in the natural sciences, with a special attention to biology and medicine. Mastering complexity implies sharing different tools requiring much higher level of communication between different mathematical and scientific schools, for solving classes of problems of the same nature. Today more than ever, one of the most important challenges derives from the need to bridge parts of a system evolving at different time and space scales, especially with respect to computational affordability. As a result the content has a rather general character; the main role is played by stochastic processes, positive semigroups, asymptotic analysis, kinetic theory, continuum theory, and game theory.

Freedom in the World 2003 Freedom House (U.S.), 2003 Freedom in the World contains both comparative ratings and written narratives and is now the standard reference work for measuring the progress and decline in political rights and civil liberties on a global basis.

Multimodal Concepts for Integration of Cytotoxic Drugs Martin J. Brown, M.P. Mehta, Carsten Nieder, 2006-08-06 The first part of this book summarizes the rationale and the preclinical data for combined treatment with ionizing radiation and pharmaceutical agents. Individual chapters focus on forms of combined treatment, with due consideration being given to a range of drugs and to emerging combinations with small molecules and antibodies. The second part comprises a series of disease-specific chapters in which the clinical results of combined modality treatment are presented.

**Tacrolimus Ointment** T. Ruzicka, S. Reitamo, 2013-04-17 Therapeutic breakthroughs in medicine are usually accompanied by a wealth of data. Often they result in a change of disease treatment paradigms. Tacrolimus ointment is the first in the new class of steroid-free Topical Immunomodulators (TIMs), and as such represents the first true breakthrough since the introduction of topical steroids more than 50 years ago for the treatment of T-cell mediated inflammatory skin diseases such as atopic dermatitis. This book gives an easy-to-read overview of the discovery and the development of

Tacrolimus ointment for the treatment of atopic dermatitis. Summarising the largest clinical trial program ever conducted in dermatology for a new treatment with more than 13000 patients, it offers a detailed insight into the efficacy and safety profile of Tacrolimus ointment. Based on this large body of data and extensive personal experience, the authors offer practical and hands-on guidance for the physician as to when and how to use Tacrolimus ointment in daily practice.
