**Cyber War** Richard A. Clarke, Robert K. Knake, 2010-04-02 An essential, eye-opening book about cyberterrorism, cyber war, and the next great threat to our national security. "Cyber War may be the most important book about national security policy in the last several years." –Slate Former presidential advisor and counter-terrorism expert Richard A. Clarke sounds a timely and chilling warning about America's vulnerability in a terrifying new international conflict. Cyber War is a powerful book about technology, government, and military strategy; about criminals, spies, soldiers, and hackers. It explains clearly and convincingly what cyber war is, and how vulnerable we are as a nation and as individuals to the vast and looming web of cyber criminals. Every concerned American should read this startling and explosive book that offers an insider's view of White House 'Situation Room' operations and carries the reader to the frontlines of our cyber defense. Cyber War exposes a virulent threat to our nation's security.

**Alternatives to Privatization** David A. McDonald, Greg Ruiters, 2012-04-23 There is a vast literature for and against privatizing public services. Those who are against privatization are often confronted with the objection that they present no alternative. This book takes up that challenge by establishing theoretical models for what does (and does not) constitute an alternative to privatization, and what might make them 'successful', backed up by a comprehensive set of empirical data on public services initiatives in over 40 countries. This is the first such global survey of its kind, providing a rigorous and robust platform for evaluating different alternatives and allowing for comparisons across regions and sectors. The book helps to conceptualize and evaluate what has become an important and widespread movement for better public services in the global South. The contributors explore historical, existing and proposed non-commercialized alternatives for primary health, water/sanitation and electricity. The objectives of the research have been to develop conceptual and methodological frameworks for identifying and analyzing alternatives to privatization, and testing these models against actually existing alternatives on the ground in Asia, Africa and Latin America. Information of this type is urgently required for practitioners and analysts, both of whom are seeking reliable knowledge on what kind of public models work, how transferable they are from one place to another and what their main strengths and weaknesses are.

**Lab-on-Fiber Technology** Andrea Cusano, Marco Consales, Alessio Crescitelli, Armando Ricciardi, 2014-07-29 This book focuses on a research field that is rapidly emerging as one of the most promising ones for the global optics and photonics community: the "lab-on-fiber" technology. Inspired by the well-established lab on-a-chip concept, this new technology essentially envisages novel and highly functionalized devices completely integrated into a single optical fiber for both communication and sensing applications. Based on the R&D experience of some of the world's leading authorities in the fields of optics, photonics, nanotechnology, and material science, this book provides a broad and accurate description of the main developments and achievements in the lab-on-fiber technology roadmap, also highlighting the new perspectives and challenges to be faced. This book is essential for scientists interested in the cutting-edge fiber optic technology, but also for graduate students.

**Rotating Relativistic Stars** John L. Friedman, Nikolaos Stergioulas, 2013-02-11 The masses of neutron stars are limited by an instability to gravitational collapse and an instability driven by gravitational waves limits their spin. Their oscillations are relevant to x-ray observations of accreting binaries and to gravitational wave observations of neutron stars formed during the coalescence of double neutron-star systems. This volume includes more than forty years of research to provide graduate students and researchers in astrophysics, gravitational physics and astronomy with the first self-contained treatment of the structure, stability and oscillations of rotating neutron stars. This monograph treats the equations of stellar equilibrium; key approximations, including slow rotation and perturbations of spherical and rotating stars; stability theory and its applications, from convective stability to the r-mode instability; and numerical methods for computing equilibrium

configurations and the nonlinear evolution of their oscillations. The presentation of fundamental equations, results and applications is accessible to readers who do not need the detailed derivations.

*"Surely You're Joking, Mr. Feynman!": Adventures of a Curious Character* Richard P.

Feynman,2018-02-06 One of the most famous science books of our time, the phenomenal national bestseller that buzzes with energy, anecdote and life. It almost makes you want to become a physicist (Science Digest). Richard P. Feynman, winner of the Nobel Prize in physics, thrived on outrageous adventures. In this lively work that "can shatter the stereotype of the stuffy scientist" (Detroit Free Press), Feynman recounts his experiences trading ideas on atomic physics with Einstein and cracking the uncrackable safes guarding the most deeply held nuclear secrets—and much more of an eyebrow-raising nature. In his stories, Feynman's life shines through in all its eccentric glory—a combustible mixture of high intelligence, unlimited curiosity, and raging chutzpah. Included for this edition is a new introduction by Bill Gates.

Lectures On Computation Richard P. Feynman,1996-09-08 Covering the theory of computation, information and communications, the physical aspects of computation, and the physical limits of computers, this text is based on the notes taken by one of its editors, Tony Hey, on a lecture course on computation given b

Volcanic Seismology Paolo Gasparini,Roberto Scarpa,Keiiti Aki,2012-12-06 For many centuries people living on volcanoes have known that the outset of seismic activity is often a forerunner of a

volcanic eruption. This understanding allowed people living close to the sites of the Mt. Nuovo 1538 eruption at Campi Flegrei, Italy, and of the Mt. Usu 1663 eruption, in Hokkaido, Japan (to quote only two examples) to flee before the eruptions started. During the second half of the 19th century seismographs were installed on some volcanoes, and the link between seismic and eruptive activity started to be assessed on a firmer scientific basis. The first systematic observations of the correlations existing between seismic activity and volcanic eruptions were probably those carried out at Mt. Vesuvius by Luigi Palmieri in 1856. Palmieri was the Director of Osservatorio Vesuviano and built an electromagnetic seismograph with the aim of making visible the smallest ground motions by recording them on paper and indicating direction, intensity and duration. He was able to show the relationship between earthquakes and the different phases of volcanic activity. He identified the harmonic tremor which he indicated was a precursor of volcanic activity: the characteristic feature of the ground motions preceding eruption is its continuity . . . (before the eruption of 1861) the electromagnetic seismograph began to show a continuous tremor. The Palmieri seismograph was also utilized in Japan until 1883, when it was replaced by the new Gray-Milne seismographs, and, later, by the Omori instruments.

**Stellar Magic** Payam Nabarz, 2009 The practical rites and ceremonies in this Liber Astrum are created using a myriad of hymns and tales, drawing inspiration and material from many ancient, classical and medieval sources including: the Hymns of Orpheus, Ovid's Metamorphoses, Plato's Timaeus, the Greek Corpus Hermeticum and the Latin Asclepius, the Greek Magical Papyri, the Chaldean Oracles, the Persian Shah Nameh 'Epic of Kings' by Ferdowsi, Scipio's Dream by Cicero, the Persian Pahlavi d104s, book of Enoch, Bible Ezekiel chapter, Egyptian temples and texts, The Golden Ass by Lucius Apuleius, the Zoroastrian Yasht hymns, Sufi works of Ibn Arabi and Rumi, the Kabalistic Sefer Yetzirah, the Mithras Liturgy, Persian Burj Nameh, the Picatrix, Hesiod Works and Days, Homer's Odyssey, Porphyry's On the Cave of the Nymphs and Aratus' Phaenomena. In bringing these ancient rites into modern times, stellar-related material and ideals by modern poets such as WB Yeats, Robert Graves, Sylvia Plath, and esoteric writers such as John Milton, John Dee, Elias Ashmole, Francis Barrett, Rudolf Steiner, Aleister Crowley, Gerald Gardner have also been included, giving a Bardic blend of the ancient and the modern. The rites here 'set the scene' and after all the poems and invocations are uttered, the point is reached in the rite where the magus has to make his/her direct connection, and to draw inspiration from the stellar well directly. The rites here are the beginning steps on your stellar journey, it is recommended that you write your own poems and invocations to the constellations and make your Path to the stars. This is a highly accessible, succinct and practical book on this complex subject, written in such a way that it can be used as a manual and workbook for practicing stellar magic or simply read for gaining insight into star lore.
