Transforming Global Information and Communication Markets Peter F. Cowhey,Jonathan D. Aronson,2012-01-13 Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed

computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

Small Country Innovation Systems Charles Edquist,Leif Hommen,2009-01-01 What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems? In this very interesting, rich and timely book, Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development. The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity, but also to some commonalities that exist across these countries. Franco Malerba, Bocconi University, Italy This major book presents case studies of ten small country national systems of innovation (NSIs) in Europe and Asia, namely, Denmark, Finland, Hong Kong, Ireland, the Netherlands, Norway, Singapore, South Korea, Sweden and Taiwan. These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation. To facilitate comparative analysis the ten studies follow a common structure, informed by

an activities-based approach to describing and analysing NSIs, which addresses the critical issues of globalization and the consequences of innovation for economic performance. The final chapter compares fast growth and slow growth countries, concentrating on issues of innovation policy. The results illustrate the usefulness of an activities-based approach to studying NSIs, point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy. This valuable book presents one of the most significant, comprehensive and comparative country studies of NSIs in the last decade. It will have great import and should be widely read by every serious student and scholar of innovation studies.

Making Software Andy Oram,Greg Wilson,2010-10-14 Many claims are made about how certain tools, technologies, and practices improve software development. But which claims are verifiable, and which are merely wishful thinking? In this book, leading thinkers such as Steve McConnell, Barry Boehm, and Barbara Kitchenham offer essays that uncover the truth and unmask myths commonly held among the software development community. Their insights may surprise you. Are some programmers really ten times more productive than others? Does

writing tests first help you develop better code faster? Can code metrics predict the number of bugs in a piece of software? Do design patterns actually make better software? What effect does personality have on pair programming? What matters more: how far apart people are geographically, or how far apart they are in the org chart? Industrial Development for the 21st Century David O'Connor,Monica Kjollerstrom,2008-06-01 With very few exceptions, industrial development has been central to the process of structural transformation which characterises economic development. Industrial Development for the 21st century examines the new challenges and opportunities arising from globalization, technological change and new international trade rules. The first part focuses on key sectors with potential for developing countries, focussing on two key themes. First, traditional points of entry for late industrializers - like textiles and clothing - have become even more intensely competitive than ever before, requiring more innovative adaptive strategies for success.

Second, countries now recognize that manufacturing does not exhaust the opportunities for producing high value-added goods and services for international markets. Knowledge intensity is increasing across all spheres of economic activity, including agriculture and services, which can offer promising development paths for some developing countries. The final section addresses social and environmental aspects of industrial development. Labour-intensive, but not necessarily other patterns of industrial development can be highly effective in poverty reduction though further industrial progress may be less labour-intensive. A range of policies can promote industrial energy and materials efficiency, often with positive impacts on firms' financial performance as well as the environment. Promoting materials recycling and reuse is an effective, if indirect means of conserving resources. Finally, the growth of multinational interest in corporate social responsibility is traced, with consideration given to both the barriers and opportunities this can pose for developing country enterprises linked to global supply chains.
