Parameter Setting in Evolutionary Algorithms F.J. Lobo,Cláudio F. Lima,Zbigniew Michalewicz,2007-04-03 One of the main difficulties of applying an evolutionary algorithm (or, as a matter of fact, any heuristic method) to a given problem is to decide on an appropriate set of parameter values. Typically these are specified before the algorithm is run and include population size, selection rate, operator probabilities, not to mention the representation and the operators themselves. This book gives the reader a solid perspective on the different approaches that have been proposed to automate control of these parameters as well as understanding their interactions. The book covers a broad area of evolutionary computation, including genetic algorithms, evolution strategies, genetic programming, estimation of distribution algorithms, and also discusses the issues of specific parameters used in parallel implementations, multi-objective evolutionary algorithms, and practical consideration for real-world applications. It is a recommended read for researchers and practitioners of evolutionary computation and heuristic methods.

Principles of Petroleum Reservoir Engineering Gian L. Chierici,2013-03-09 Six years ago, at the end of my professional career in the oil industry, I left my management position within Agip S.p.A., a major multinational oil company whose headquarters are in Italy, to take up the chair in reservoir engineering at the University of Bologna, Italy. There, I decided to prepare what was initially intended to be a set of lecture notes for the students attending the course. However, while preparing these notes, I became so absorbed in the subject matter that I soon found myself creating a substantial volume of text which could not only serve as a university course material, but also as a reference for wider professional applications. Thanks to the interest shown by the then president of Agip, Ing. Giuseppe Muscarella, this did indeed culminate in the publication of the first Italian edition of this book in 1989. The translation into English and publication of these volumes owes much to the encouragement of the current president of Agip, Ing. Guglielmo Moscato. My grateful thanks are due to both gentlemen. And now - the English version, translated from the second Italian edition, and containing a number of revisions and much additional material. As well as providing a solid theoretical basis for the various topics, this work draws extensively on my 36 years of worldwide experience in the development and exploitation of oil and gas fields.

In the Beginning, Woman was the Sun Raich Hiratsuka,2010 'In the Beginning, Woman Was the Sun' presents a personal account of the author's life in late 19th and early 20th century Japanese society. This is a story of a woman at once idealistic and elitist, fearless and vain, perceptive and brilliant.

Mathematical Methods for Engineers and Scientists 3 Kwong-Tin Tang,2007-01-10 Pedagogical insights gained through 30 years of teaching applied mathematics led the author to write this set of student oriented books. Topics such as complex analysis, matrix theory, vector and tensor analysis, Fourier analysis, integral transforms, ordinary and partial differential equations are presented in a discursive style that is readable and easy to follow. Numerous examples, completely worked out, together with carefully selected problem sets with answers are used to enhance students' understanding and manipulative skill. The goal is to make students comfortable in using advanced mathematical tools in junior, senior, and beginning graduate courses.

Scalable Optimization via Probabilistic Modeling Martin Pelikan,Kumara Sastry,Erick Cantú-Paz,2006-09-25 I'm not usually a fan of edited volumes. Too often they are an incoherent hodgepodge of remnants, renegades, or rejects foisted upon an unsuspecting reading public under a misleading or fraudulent title. The volume *Scalable Optimization via Probabilistic Modeling: From Algorithms to Applications* is a worthy addition to your library because it succeeds on exactly those dimensions where so many edited volumes fail. For example, take the title, *Scalable Optimization via Probabilistic Modeling: From Algorithms to Applications*. You need not worry that you're going to pick up this book and find stray articles about anything else. This book focuses like a laser beam on one of the hottest topics in evolutionary computation over the last decade or so: estimation of distribution algorithms (EDAs). EDAs borrow evolutionary computation's population orientation and selectionism and throw out the genetics to give us a hybrid of substantial power, elegance, and extensibility. The article sequencing in most edited volumes is hard to understand, but from the get go the editors of this volume have assembled a set of articles sequenced in a logical fashion. The book moves from design to efficiency enhancement and then concludes with relevant applications. The emphasis on efficiency enhancement is particularly important, because the data-mining perspective implicit in EDAs opens up the world of optimization to new methods of data-guided adaptation that can further speed solutions through the construction and utilization of effective surrogates, hybrids, and parallel and temporal decompositions.

Lev Shestov and His Times Andrius Valevicius,1993 Lev Shestov (1866-1938) has been acclaimed as the most original twentieth-century Russian philosopher. Living in Paris after the Russian Revolution, Shestov caught the attention of French intellectuals (such as A. Gide, G. Marcel, E. Mounier and later A. Camus) with his penetrating portrayals of existentialists in France. This book examines Shestov's interpretations of Dostoevsky, Tolstoy, Nietzsche, Chekhov, Ibsen and his confrontation with the philosopher Edmund Husserl, whom Shestov first introduced to philosophical circles. This book also takes into consideration a wealth of Russian language literature on Shestov.

Evolutionary Algorithms for Food Science and Technology Evelyne Lutton,Nathalie Perrot,Alberto Tonda,2016-12-27 Researchers and practitioners in food science and technology routinely face several challenges, related to sparseness and heterogeneity of data, as well as to the uncertainty in the measurements and the introduction of expert knowledge in the models. Evolutionary algorithms (EAs), stochastic optimization techniques loosely inspired by natural selection, can be effectively used to tackle these issues. In this book, we present a selection of case studies where EAs are adopted in real-world food applications, ranging from model learning to sensitivity analysis.
