## **Parallel Problem Solving from Nature - PPSN VII**

Juan J. Merelo, Panagiotis Adamidis, Hans-Georg Beyer, 2003-06-30 We are proud to introduce the proceedings of the Seventh International Conference on Parallel Problem Solving from Nature, PPSN VII, held in Granada, Spain, on 7–11 September 2002. PPSN VII was organized back-to-back with the Foundations of Genetic Algorithms (FOGA) conference, which took place in Torremolinos, Malaga, Spain, in the preceding week.

The PPSN series of conferences started in Dortmund, Germany [1]. From that pioneering meeting, the event has been held biennially, in Brussels, Belgium [2], Jerusalem, Israel [3], Berlin, Germany [4], Amsterdam, The Netherlands [5], and Paris, France [6]. During the Paris conference, several bids to host PPSN 2002 were put forward; it was decided that the conference would be held in Granada with Juan J. Merelo Guervós as General Chairman. The scientific content of the PPSN conference focuses on problem-solving paradigms gleaned from natural models, with an obvious emphasis on those that display an innate parallelism, such as evolutionary algorithms and ant-colony optimization algorithms. The majority of the papers, however, concentrate on evolutionary and hybrid algorithms, as is shown in the contents of this book and its predecessors. This edition of the conference proceedings has a large section on applications, both to classical problems and to real-world engineering problems, which shows how bioinspired algorithms are extending their use in the realms of business and enterprise.

**Nature, Landscape, and Building for Sustainability** William S. Saunders, 2008 The complexity and scale of the environmental problems confronting humanity today provoke a wide range of responses, from indifference to anger to creativity. Among a growing number of architects, landscape architects, and planners, however, these problems have inspired a new vision-sustainability-to guide their practices. In *Nature, Landscape, and Building for Sustainability*, a diverse group of contributors considers the concept of sustainability, both philosophically and practically. Some take a broad view of the divisions between nature and humanity, exploring the incomprehensible scale of human intervention in the natural world, the relationship between how we feel about nature and what we do about it, and the commodification of the natural world. Other essays focus on sustainable design practices: sustainability's roots in the American conservation tradition, its utility as a framework for future design practice, and the necessity of moving beyond demonstration projects into the mainstream. Together, these essays suggest that the gap between the promise and reality of sustainable design, although significant, can be bridged through diligence and practice. Contributors: D.
