Parallel Problem Solving from Nature - PPSN VII Juan J. Merelo,Panagiotis Adamidis,Hans-Georg Beyer,2003-06-30 We are proud to introduce the proceedings of the Seventh International Conference on Parallel Problem Solving from Nature, PPSN VII, held in Granada, Spain, on 7–11 September 2002. PPSN VII was organized back-to-back with the Foundations of Genetic Algorithms (FOGA) conference, which took place in Torremolinos, Malaga, Spain, in the preceding week. ThePPSNseriesofconferencesstartedinDortmund,Germany[1].Fromthat pioneering meeting, the event has been held biennially, in Brussels, Belgium [2], Jerusalem, Israel [3], Berlin, Germany [4], Amsterdam, The Netherlands [5], and Paris, France [6]. During the Paris conference, several bids to host PPSN 2002 were put forward; it was decided that the conference would be held in Granada with Juan J. Merelo Guervós as General Chairman. The scientific content of the PPSN conference focuses on problem-solving paradigms gleaned from natural models, with an obvious emphasis on those that display an innate parallelism, such as evolutionary algorithms and ant-colony optimization algorithms. The majority of the papers, however, concentrate on evolutionary and hybrid algorithms, as is shown in the contents of this book and its predecessors. This edition of the conference proceedings has a large section on applications, be they to classical problems or to real-world engineering problems, which shows how bioinspired algorithms are extending their use in the realms of business and enterprise.

Health and Natural Landscapes Alan Ewert,Denise Mitten,Jillisa Overholt,2021-06-29 Natural landscapes are intricately tied to human health and well-being. While contemporary lifestyles have caused people to feel disconnected from the natural environment, this relationship is now recognized as vitally important, with landscapes increasingly valued for their stress-reduction, aesthetic, and restorative benefits. Providing an overview of the history, theoretical concepts, and individual and societal implications of human connection to natural landscapes, this book considers natural landscapes' role as an antidote to our modern, predominantly urban society.

Integrated Coastal Management Law Cormac Cullinan,2006 Integrated coastal management (ICM) is widely accepted throughout the world as the best approach to dealing with coastal issues. The 1990s saw a proliferation of legislative reform processes worldwide. This aimed at supporting the implementation of ICM. Despite many international environmental treaties, declarations and other promises of action, the quality of coastal environments continues to deteriorate while the demand for coastal resources has increased in most of the world. This publication, in its practical guidance, will be especially valuable to anyone involved in the development, drafting or implementation of a legal or institutional framework to promote ICM. It is enhanced by illustrative examples from a range of countries that are at various stages of developing and implementing legislation to promote ICM.

Biogeology Bernard Michaux,2019-07-02 This detailed exposition gives background and context to how modern biogeography has got to where it is now. For biogeographers and other researchers interested in biodiversity and the evolution of life on islands, *Biogeology: Evolution in a Changing Landscape* provides an overview of a large swathe of the globe encompassing Wallacea and the western Pacific. The book contains the full text of the original article explored in each chapter, presented as it appeared on publication. Key features: Holistic treatment, collecting together a series of important biogeographical papers into a single volume Authored by an expert who has spent nearly three decades actively involved in biogeography Describes and interprets a region of exceptional biodiversity and extreme endemism The only book to provide an integrated treatment of Wallacea, Melanesia, New Zealand, the New Zealand Subantarctic Islands and Antarctica Offers a critique of fashionable neo-dispersalist arguments, showing how these still suffer from the same weaknesses of the original Darwinian formulation. The chapters also include analysis of many major theoretical and philosophical issues of modern biogeographic theory, so that those interested in a more philosophical approach will find the book stimulating and thought-provoking.

Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Future Options for Management in the Nation's Subsurface Remediation Effort,2013-03-27 Across the United States, thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards. These include Superfund sites and other facilities that handle and dispose of hazardous waste, active and inactive dry cleaners, and leaking underground storage tanks; many are at federal facilities such as military installations. While many sites have been closed over the past 30 years through cleanup programs run by the U.S. Department of Defense, the U.S. EPA, and other state and federal agencies, the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve drinking water standards in the affected groundwater. *Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites* estimates that at least 126,000 sites across the U.S. still have contaminated groundwater, and their closure is expected to cost at least \$110 billion to \$127 billion. About 10 percent of these sites are considered complex, meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations. At sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts, the report recommends evaluating whether the sites should transition to long-term management, where risks would be monitored and harmful exposures prevented, but at reduced costs.

Nature and Culture : American Landscape and Painting, 1825-1875, With a New Preface Barbara Novak Altschul Professor of Art History Barnard College and Columbia University (Emerita),2007-01-05 In this richly illustrated volume, featuring more than fifty black-and-white illustrations and a beautiful eight-page color insert,

Barbara Novak describes how for fifty extraordinary years, American society drew from the idea of Nature its most cherished ideals. Between 1825 and 1875, all kinds of Americans--artists, writers, scientists, as well as everyday citizens--believed that God in Nature could resolve human contradictions, and that nature itself confirmed the American destiny. Using diaries and letters of the artists as well as quotes from literary texts, journals, and periodicals, Novak illuminates the range of ideas projected onto the American landscape by painters such as Thomas Cole, Albert Bierstadt, Frederic Edwin Church, Asher B. Durand, Fitz H. Lane, and Martin J. Heade, and writers such as Ralph Waldo Emerson, Henry David Thoreau, and Frederich Wilhelm von Schelling. Now with a new preface, this spectacular volume captures a vast cultural panorama. It beautifully demonstrates how the idea of nature served, not only as a vehicle for artistic creation, but as its ideal form. An impressive achievement. --Barbara Rose, The New York Times Book Review An admirable blend of ambition, elan, and hard research. Not just an art book, it bears on some of the deepest fantasies of American culture as a whole. --Robert Hughes, Time Magazine

Design with the Desert Richard Malloy, John Brock, Anthony Floyd, Margaret Livingston, Robert H. Webb, 2013-01-16 The modern southwestern cities of Phoenix, Tucson, Las Vegas, Albuquerque, and El Paso occupy lands that once supported rich desert ecosystems. Typical development activities often resulted in scraping these desert lands of an ancient living landscape, to be replaced with one that is human-made and dependent on a large consumption of energy and natural resources. Design with the Desert: Conservation and Sustainable Development explores the natural and built environment of the American Southwest and introduces development tools for shaping the future of the region in a more sustainable way. Explore the Desert Landscape and Ecology This transdisciplinary collaboration draws on insights from leading authorities in their fields, spanning science, ecology, planning, landscape development, architecture, and urban design. Organized into five parts, the book begins by introducing the physical aspects of the desert realm: the land, geology, water, and climate. The second part deals with the living and ecological aspects, from plants and animals to ecosystems. The third part, on planning in the desert, covers the ecological and social issues surrounding water, natural resource planning, and community development. Bring the Desert into the City The fourth part looks at how to bring nature into the built environment through the use of native plants, the creation of habitats for nature in urban settings, and the design of buildings, communities, and projects that create life. The final part of the book focuses on urban sustainability and how to design urban systems that provide a secure future for community development. Topics include water security, sustainable building practices, and bold architecture and community designs. Design Solutions That Work with the Local Environment This book will inspire discussion and contemplation for anyone interested in desert development, from developers and environmentalists to planners, community leaders, and those who live in desert regions. Throughout this volume, the contributors present solutions to help promote ecological balance between nature and the built environment in the American Southwest--and offer valuable insights for other ecologically fragile regions around the world.

The Arctic in International Law and Policy Kristina Schönfeldt, 2017-08-24 The Arctic is an increasingly important region faced with major challenges caused not only by the effects of climate change, but also by a growing interest in its living and non-living resources, its attraction as a new destination for tourism, and as a route for navigation. It is not only the eight Arctic States that have paid an increased level of attention to the region; several non-Arctic actors from Asia and Europe also seek to gain more influence in the High North. At the same time, the evolving law and policy architecture for the Arctic region has recently played a more prominent role in the political and academic debate. Unlike Antarctica, where the coherent Antarctic Treaty System governs international cooperation, the legal regime of Arctic affairs is based on public international law, domestic law, and 'soft law'. These three pillars intersect and interact making Arctic governance multi-faceted and highly complex. This book provides an analytical introduction, a chronology of legally relevant events, and a selection of essential materials covering a wide range of issues-eg delineation and delimitation of maritime boundaries, environmental protection, indigenous peoples' rights, shipping, and fisheries. Included are multilateral and bilateral treaties, UN documents, official statements, informal instruments, domestic laws, and diplomatic correspondence.

Parish and Belonging K. D. M. Snell, 2006-11-16 What role did the parish play in people's lives in England and Wales between 1700 and the mid-twentieth century? By comparison with globalisation and its dislocating effects, the book stresses how important parochial belonging once was. Professor Snell discusses themes such as settlement law and practice, marriage patterns, cultures of local xenophobia, the continuance of out-door relief in people's own parishes under the new poor law, the many new parishes of the period and their effects upon people's local attachments. The book highlights the continuing vitality of the parish as a unit in people's lives, and the administration associated with it. It employs a variety of historical methods, and makes important contributions to the history of welfare, community identity and belonging. It is highly relevant to the modern themes of globalisation, de-localisation, and the decline of community, helping to set such changes and their consequences into local historical perspective.

An Introduction to Scientific Research Methods in Geography and Environmental Studies Daniel Montello, Paul Sutton, 2012-12-10 Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs. qualitative and physical vs. human which I've found particularly valuable. The chapters on research ethics, scientific communication, information technologies and data visualization are excellent - Kenneth E. Foote, Department of Geography, University of Colorado at Boulder This is a broad and integrative introduction to the conduct and interpretation of scientific research, covering both geography and environmental studies. Written for undergraduate and postgraduate students, it: Explains both the conceptual and the technical aspects of research, as well as all phases of the research process Combines approaches in physical geography and environmental science, human geography and human-environment relations, and geographic and environmental information techniques (such as GIS, cartography, and remote sensing) Combines natural and social scientific approaches common to subjects in geography and environmental studies Includes case studies of actual research projects to demonstrate the breadth of approaches taken It will be core reading for students studying scientific research methods in geography, environmental studies and related disciplines such as planning and earth science.
