Community Engagement in a Changing Social Landscape Winston Tinglin,Donna

Joyette,2020-02-28 Community Engagement in a Changing Social Landscape reaches deep into the authors' extensive experience as both observers and practitioners of community engagement. It is further enriched by insights drawn from the diverse experiences of professionals in the field. Critical questions are honestly faced in a refreshing discourse that also highlights promising practices and approaches. These combined features provide both a thought-provoking retrospective and forward-looking commentary, which offer the reader a renewed understanding of community engagement and its exciting possibilities. Professionals, students and volunteers working in the community should find in this book a very useful resource.

G20 Rising Powers in the Changing International Development Landscape Emel Parlar

Dal,2022-09-13 This book aims to explore and contextualize G20 rising powers' increasing role in international development from a comprehensive and multidimensional perspective. This book will scrutinize the G20 rising powers' evolving role as international development actors around three research questions: 1) How do we contextualize and locate G20 rising powers as emerging actors in international development? 2) What are the main contributions, trends and limits of G20 rising powers in South-South Cooperation? 3) Does G20 rising powers' active involvement in international development support their foreign policy objectives and challenge the international development order? Based on these three, interrelated research questions, this cluster of chapters is structured as follows: The first part, elaborated under the first research question, focuses on the historical development and current dynamics of (G20) rising powers' evolving actorness in international development to assess their main motivations, ambitions and instruments. The second part examines the main contributions, trends and limits of G20 rising powers in South-South Cooperation. The third part delves into an assessment of the linkage between G20 rising powers' active involvement in international development and their foreign policies.

Emulating Natural Forest Landscape Disturbances Ajith H. Perera,Lisa J. Buse,Michael G.

Weber,2008-01-11 What is a natural forest disturbance? How well do we understand natural forest disturbances and how might we emulate them in forest management? What role does emulation play

in forest management? Representing a range of geographic perspectives from across Canada and the United States, this book looks at the escalating public debate on the viability of natural disturbance emulation for sustaining forest landscapes from the perspective of policymakers, forestry professionals, academics, and conservationists. This book provides a scientific foundation for justifying the use of and a solid framework for examining the ambiguities inherent in emulating natural forest landscape disturbance. It acknowledges the divergent expectations that practitioners face and offers a balanced view of the promises and challenges associated with applying this emerging forest management paradigm. The first section examines foundational concepts, addressing questions of what emulation involves and what ecological reasoning substantiates it. These include a broad overview, a detailed review of emerging forest management paradigms and their global context, and an examination of the ecological premise for emulating natural disturbance. This section also explores the current understanding of natural disturbance regimes, including the two most prevalent in North America: fire and insects. The second section uses case studies from a wide geographical range to address the characterization of natural disturbances and the development of applied templates for their emulation through forest management. The emphasis on fire regimes in this section reflects the greater focus that has traditionally been placed on understanding and managing fire, compared with other forms of disturbance, and utilizes several viewpoints to address the lessons learned from historical disturbance patterns. Reflecting on current thinking in the field, immediate challenges, and potential directions, the final section moves deeper into the issues of practical applications by exploring the expectations for and feasibility of emulating natural disturbance through forest management.

MetroGreen Donna Erickson,2012-09-26 In metropolitan areas across the country, you can hear the laments over the loss of green space to new subdivisions and strip malls. But some city residents have taken unprecedented measures to protect their open land, and a growing movement seeks not only to preserve these lands but to link them in green corridors. Many land-use and urban planning professionals, along with landscape architects and environmental advocates, have joined in efforts to preserve natural areas. MetroGreen answers their call for a deeper exploration of the latest thinking and newest practices in this growing conservation field. In ten case studies of U.S. and Canadian cities

paired for comparative analysis-Toronto and Chicago, Calgary and Denver, and Vancouver and Portland among them-Erickson looks closely at the motivations and objectives for connecting open spaces across metropolitan areas. She documents how open-space networks have been successfully created and protected, while also highlighting the critical human and ecological benefits of connectivity. MetroGreen's unique focus on several cities rather than a single urban area offers a perspective on the political, economic, cultural, and environmental conditions that affect open-space planning and the outcomes of its implementation.

Grazing in Future Multi-scapes: From Thoughtscapes to Landscapes, Creating Health from the Ground Up Pablo Gregorini,Iain James Gordon,Carol Kerven,Fred Provenza,2022-09-27 This Research Topic is hosted in partnership with the Grazing in Future Multi-Scapes international workshop. The workshop will be held online, 30th May - 5th June 2021. Throughout different landscapes of the world, “grazing” herbivores fulfill essential roles in ecology, agriculture, economies and cultures including: families, farms, and communities. Not only do livestock provide food and wealth, they also deliver ecosystem services through the roles they play in environmental composition, structure and dynamics. Grazing, as a descriptive adjective, locates herbivores within a spatial and temporal pastoral context where they naturally graze or are grazed by farmers, ranchers, shepherds etc. In many cases, however, pastoralism with the single objective of maximizing animal production and/or profit has transformed landscapes, diminishing biodiversity, reducing water and air quality, accelerating loss of soil and plant biomass, and displacing indigenous animals and people. These degenerative landscape transformations have jeopardized present and future ecosystem and societal services, breaking the natural integration of land, water, air, health, society and culture. Land-users, policy makers and societies are calling for alternative approaches to pastoral systems; a call for diversified-adaptive and integrative agro-ecological and food-pastoral-systems designs that operate across multiple scales and ‘scapes’ (e.g. thought-, social-, land-, food-, health-, wild-scapes), simultaneously. There needs to be a paradigm shift in pastoral production systems and how grazing herbivores are managed –grazed- within them, derived initially from a change in perception of how

they provide wealth. The thoughtsapes will include paradigm shifts where grazers move away from the actual archetype of pastoralism, future landscapes are re-imagined, and regenerative and sustainable management paradigms are put in place to achieve these visions. From this will come a change in collective thinking of how communities and cultures (socialscapes) perceive their relationships with pastoral lands. The landscapes are the biotic and abiotic four-dimensional domains or environments in need of nurture. Landscapes are the tables where humans and herbivores gain their nourishment, i.e. foodscapes. Foodscapes and dietary perceptions, dictate actions and reactions that are changing as developed countries grapple with diseases related to obesity, and people starve in developing countries. Societies are demanding healthscapes and nutraceutical foodscapes, and paradoxically, some are moving away from animal products. While indigenous species of animals, including humans (wildscapes), have been displaced from many of their lands by monotonic pastoralism, multifunctional pastoral systems can be designed in view of dynamic multi-scapes of the future. The purpose of this Research Topic is to influence future mental and practical models of pastoralism in continually evolving multi-scapes. We seek a collection of papers that will cultivate such a shift in thinking towards future models of sustainable multipurpose pastoralism. The contributions will be synthesized to establish how multifunctional pastoral systems can be re-imagined and then designed in view of the integrative dynamics of sustainable future multi-scapes.

Methodology in Landscape Ecological Research and Planning ,1984

Urban Green Belts in the Twenty-first Century Marco Amati,2016-02-11 Planners internationally have employed green belts to contain the explosive sprawl of cities as varied as Tokyo, Vienna and Melbourne during the twentieth century. As yet, no collection has gathered these experiences together to consider their contribution to planning. Juxtaposing examples of green belt implementation worldwide, this book adds to understanding of how green belts can be effected in theory and how practitioners have adapted them in practice. The book provides a typology of green belt implementation and reform, enabling planners to grasp why these policies are employed and whether they are relevant to twenty-first century planning.
