The Last Unicorn (Graphic Novel) Peter S. Beagle,Peter B. Gillis,2019-07-16 Peter S. Beagle's beloved fantasy classic captured imaginations around the world and takes on new life in this luscious, fully illustrated graphic novel adaptation. The Last Unicorn is a tale for any age about the wonders of magic, the power of love, and the tragedy of loss. The unicorn, alone in her enchanted wood, learns that she may be the last of her kind. Reluctant at first, she sets out on a journey to discover the fate of her fellow unicorns, even if it means facing the terrifying anger of the Red Bull and the malignant evil of the king who wields its power. Along the way she'll encounter a cast of unforgettable characters, including Schmendrick the magician, the bandit Molly Grue, the noble Prince Lir, and the occasional talking butterfly. Adapted by Peter B. Gillis and lushly illustrated by Renae De Liz and Ray Dillon, The Last Unicorn is simultaneously current and timeless in this newest incarnation.

The Early Neolithic of the Eastern Fertile Crescent Roger Matthews,Wendy Matthews,Kamal Rasheed Raheem,Amy Richardson,2020-07-31 The Eastern Fertile Crescent region of western Iran and eastern Iraq hosted major developments in the transition from hunter-forager to farmer-herder lifestyles through the Early Neolithic period, 10,000-7000 BC. Within the scope of the Central Zagros Archaeological Project, excavations have been conducted since 2012 at two Early Neolithic sites in the Kurdistan region of Iraq: Bestansur and Shimshara. Bestansur represents an early stage in the transition to sedentary, farming life, where the inhabitants pursued a mixed strategy of hunting, foraging, herding and cultivating, maximising the new opportunities afforded by the warmer, wetter climate of the Early Holocene. They also constructed substantial buildings of mudbrick, including a major building with a minimum of 65 human individuals, mainly infants, buried under its floor in association with hundreds of beads. These human remains provide new insights into mortuary practices, demography, diet and disease during the early stages of sedentarisation. The material culture of Bestansur and Shimshara is rich in imported items such as obsidian, carnelian and sea-shells, indicating the extent to which Early Neolithic communities were networked across the Eastern Fertile Crescent and beyond. This volume includes final reports by a large-scale interdisciplinary team on all aspects of the results from excavations at Bestansur and Shimshara, through application of state-of-the-art scientific techniques, methods and analyses. The net result is to re-emphasise the enormous significance of the Eastern Fertile Crescent in one of the most important episodes in human history: the Neolithic transition.

Receptor Tyrosine Kinases: Structure, Functions and Role in Human Disease Deric L. Wheeler,Yosef Yarden,2014-11-26 Receptor Tyrosine Kinase: Structure, Functions and Role in Human Disease, for the first time, systematically covers the shared structural and functional features of the RTK family. Receptor Tyrosine Kinases (RTKs) play critical roles in embryogenesis, normal physiology and several diseases. And over the last decade they have become the Number 1 targets of cancer drugs. To be able to conduct fundamental research or to attempt to develop pharmacological agents able to enhance or intercept them, it is essential first to understand the evolutionary origin of the 58 RTKs and their roles in invertebrates and in humans, as well as downstream signaling pathways. The assembly of chapters is written by experts and underscores commonalities between and among the RTKs. It is an ideal companion volume to The Receptor Tyrosine Kinase: Families and Subfamilies, which proceeds, family by family through all of the specific subfamilies of RTKs, along with their unique landmarks.

The Saturn System Through The Eyes Of Cassini Nasa,2018-03-22 The Saturn System Through The Eyes Of Cassini is printed in full-color on 70-pound paper. The Cassini-Huygens mission has revolutionized our knowledge of the Saturn system and revealed surprising places in the solar system where life could potentially gain a foothold--bodies we call ocean worlds. Since its arrival in 2004, Cassini-Huygens has been nothing short of a discovery machine, captivating us with data and images never before obtained with such detail and clarity. Cassini taught us that Saturn is a far cry from a tranquil lone planet with delicate rings. Now, we know more about Saturn's chaotic, active, and powerful rings, and the storms that rage beneath. Images and data from Saturn's moons Titan and

Enceladus hint at the possibility of life never before suspected. The rings of Saturn, its moons, and the planet itself offer irresistible and inexhaustible subjects for intense study. As the Cassini mission comes to a dramatic end with a fateful plunge into Saturn on Sept. 15, 2017, scientists are already dreaming of going back for further study.

It also represents the culmination of a lifetime's research for its author, considered to be the foremost scholar of ragtime and early twentieth-century popular music. Rare photographs accompany most entries, taken from the original sheets, newspapers, and other archival sources.

Degenerative Cervical Myelopathy and Radiculopathy Michael G. Kaiser,Regis W. Haid,Christopher I. Shaffrey,Michael G. Fehlings,2019-01-17

Degenerative disorders of the cervical spine are among the more common reasons why patients seek medical attention or consult with a spine specialist. These conditions can lead to neck pain and/or neurological deficit that can significantly compromise an individual's quality of life. Despite the regularity of these conditions, there remains both uncertainty and controversy regarding optimal management. No standard of care exists, however there are nuances related to a patient's history, clinical presentation, and imaging that may make one approach more conducive to clinical success. This text is intended to serve as a comprehensive, up-to-date resource for clinicians involved in the management of patients with cervical degenerative disease. The text is divided into sections, organized in a clinically strategic manner. The initial chapters address the basics of cervical spine anatomy and biomechanics as well as the pathophysiology leading to various cervical degenerative disorders and the possible neurological sequelae. Subsequent chapters outline characteristics of the clinical presentation and the various diagnostic modalities to evaluate these patients. Key elements involved in the surgical-decision making process are covered, providing the necessary elements to establish a solid foundation for treatment planning. The final sections discuss specific procedures; including traditional approaches as well as more recent developments such as motion preservation surgery and minimally invasive techniques. The last section focuses on challenging clinical scenarios that require advanced surgical consideration. Individual chapters are organized with an introductory outline containing key chapter elements. Chapters focusing on specific pathological entities include discussions regarding pathophysiology, genetics, and risk factors. Those describing surgical procedures include a discussion on indications/contraindications, pre-operative planning, surgical technique, post-operative care, and complication avoidance. Chapter authors present their personal experience enhancing the information from current, evidence-based, referenced material. When appropriate, case presentations are added to provide a practical application of chapter's key points. This text, based on relevant, up-to-date clinical information and the cumulative experience of current spine experts, offers physicians the necessary tools involved in the decision-making process to formulate the optimal treatment plan for an individual patient. In addition, identification of knowledge gaps will hopefully stimulate future research and the evolution of cervical spondylotic treatments.

RECENT PROGRESS ON ELECTROCHEMISTRY AT THE IBERIAN PENINSULA JUAN DANIEL MOZO, CRISTINA MOZO-MULERO, 2020-12 This book is a compilation of research works on electrochemistry in the broadest of its meanings, carried out by Spanish and Portuguese researchers around 2019. It aims to collect the most significant of our research and to show the excellent level that these works have in comparison with the international state of the art. The selection of works, in an extended abstract format, is based on the papers presented as invited plenary conferences and keynote oral communications at the XL Meeting of the Specialized Electrochemistry Group of the Spanish Royal Society of Chemistry and the XX Iberian Electrochemistry Meeting, which took place in the city of Huelva (Spain) between 9th and 12th July 2019. In an attempt to cover the work of Iberian electrochemists in the most complete and representative way possible, several invited chapters have been added to this set of works. On some occasions, the authors have reported on potential legal problems regarding the publication rights of their work, mainly due to the high interest in their results and the fact that they had already been submitted to very high impact journals for publication. In this case, they have been allowed to replace their original work by a mini review of their laboratory's line of research, keeping as much as possible the same research topic.
