**Vertebrates and Invertebrates of European Cities:Selected Non-Avian Fauna** John G. Kelcey,2015-10-19 Vertebrates and Invertebrates of European Cities: Selected Non-Avian Fauna is the first known account of the vertebrate and invertebrate fauna of several cities in Europe and throughout the rest of the world. It excludes birds, which are described in a companion volume. The book contains eleven chapters about nine cities distributed throughout Europe. The chapters start with the history of the cities, which is followed by a description of the abiotic features such as geology, climate, air and water quality and then a brief account of the habitats. The vertebrate chapters describe the fish, amphibians, reptiles and mammals that are known to occur in each city together with their status and the habitats in which they occur, for example housing, industrial areas, parks, transport routes and rivers. The invertebrate chapters contain an account of the presence, status and habitats occupied by 6 - 8 of the major invertebrate groups including butterflies, dragonflies and damselflies, crickets and grasshoppers, beetles, molluscs, spiders, mites and springtails. This volume has been written and edited to be accessible to a wide range of interests and expertise including academic biologists, urban ecologists, landscape architects, planners, urban designers, undergraduates, other students and people with a general interest in natural history (especially cities) - not only in Europe but throughout the world.

*Legumes for Soil Health and Sustainable Management* Ram Swaroop Meena,Anup Das,Gulab Singh Yadav,Rattan Lal,2018-07-06 Sustainable management of soils is an important global issue of the 21st century. Feeding roughly 8 billion people with an environmentally sustainable production system is a major challenge, especially considering the fact that 10% of the world's population at risk of hunger and 25% at risk of malnutrition. Accordingly, the 68th United Nations (UN) general assembly declared 2016 the "International Year of Pulses" to raise awareness and to celebrate the role of pulses in human nutrition and welfare. Likewise, the assembly declared the year 2015 as the "International Year of Soils" to promote awareness of the role of "healthy soils for a healthy life" and the International Union of Soil Science (IUSS) has declared 2015-2024 as the International Decade of Soils. Including legumes in cropping systems is an important toward advancing soil sustainability, food and nutritional security without compromising soil quality or its production potential. Several textbooks and edited volumes are currently available on general soil fertility or on legumes but, to date, none have been dedicated to the study of "Legumes for Soil Health and Sustainable Management". This is important aspect, as the soil, the epidermis of the Earth (geoderma), is the major component of the terrestrial biosphere. This book explores the impacts of legumes on soil health and sustainability, structure and functioning of agro-ecosystems, agronomic productivity and food security, BNF, microbial transformation of soil N and P, plant-growth-promoting rhizobacteria, biofertilizers, etc. With the advent of fertilizers, legumes have been sidelined since World War II, which has produced serious consequences for soils and the environment alike. Therefore, legume-based rational cropping/soil management practices must support environmentally and economically sustainable agroecosystems based on (sequential) rotation and intercropping considerations to restore soil health and sustainability. All chapters are amply illustrated with appropriately placed data, tables, figures, and photographs, and supported with extensive and cutting-edge references. The editors have provided a roadmap for the sustainable development of legumes for food and nutritional security and soil sustainability in agricultural systems, offering a unique resource for teachers, researchers, and policymakers, as well as undergraduate and graduate students of soil science, agronomy, ecology, and the environmental sciences.
