Information and Communication Technologies in Tourism 1997 A. Min Tjoa, 2012-12-06 For the fourth time now, experts in tourism from various countries come to attend the ENTER conference in order to inform themselves and others about the current developments in the usage of information and communication technologies. The ENTER conference is thought as a platform for the exchange of ideas, experiences, opinions, and visions among scientists and practitioners. The visions presented at the last three ENTER conferences have triggered many requirements of important on-going and planned projects in the application of communication and information technologies in tourism. The scope of the papers of this proceedings covers the most recent and relevant topics in our area of interest. The sessions are primarily devoted to intelligent agents and systems, the future role of global (reservation) systems, the new chances of data base applications due to the most recent technological developments. and above all the role of

the Internet (and Intranet). I would like to express my cordial thanks to all institutions actively supporting this event, namely: • The Edinburgh & Lothian Tourist Board • The International Federation of Information Technology in Tourism (IFITT) Several people spent numerous hours organizing the scientific programme of EN TER. The names of most of them will appear in the following pages.

ZAG Marty Neumeier, 2006-09-20 When everybody zigs, zag, says Marty Neumeier in this fresh view of brand strategy. ZAG follows the ultra-clear whiteboard overview style of the author's first book, THE BRAND GAP, but drills deeper into the question of how brands can harness the power of differentiation. The author argues that in an extremely cluttered marketplace, traditional differentiation is no longer enough—today companies need “radical differentiation” to create lasting value for their shareholders and customers. In an entertaining 3-hour read you'll learn: - why me-too brands are doomed to fail - how to read customer feedback on new products and messages - the 17 steps for designing “difference” into your brand - how to turn your brand's “onliness” into a “trueline” to drive synergy - the secrets of naming products, services, and companies - the four deadly dangers faced by brand portfolios - how to “stretch” your brand without breaking it - how to succeed at all three stages of the competition cycle From the back cover: In an age of me-too products and instant communications, keeping up with the competition is no longer a winning strategy. Today you have to out-position, out-maneuver, and out-design the competition. The new rule? When everybody zigs, zag. In his first book, THE BRAND GAP, Neumeier showed companies how to bridge the distance between business strategy and design. In ZAG, he illustrates the number-one strategy of high-performance

brands—radical differentiation. ZAG is an AIGA Design Press book, published under Peachpit's New Riders imprint in partnership with AIGA. For a quick peek inside ZAG, go to www.zagbook.com.

See MIPS Run Dominic Sweetman, 2010-07-08 See MIPS Run, Second Edition, is not only a thorough update of the first edition, it is also a marriage of the best-known RISC architecture--MIPS--with the best-known open-source OS--Linux. The first part of the book begins with MIPS design principles and then describes the MIPS instruction set and programmers' resources. It uses the MIPS32 standard as a baseline (the 1st edition used the R3000) from which to compare all other versions of the architecture and assumes that MIPS64 is the main option. The second part is a significant change from the first edition. It provides concrete examples of operating system low level code, by using Linux as the example operating system. It describes how Linux is built on the foundations the MIPS hardware provides and summarizes the Linux application environment, describing the libraries, kernel device-drivers and CPU-specific code. It then digs deep into application code and library support, protection and memory management, interrupts in the Linux kernel and multiprocessor Linux. Sweetman has revised his best-selling MIPS bible for MIPS programmers, embedded systems designers, developers and programmers, who need an in-depth understanding of the MIPS architecture and specific guidance for writing software for MIPS-based systems, which are increasingly Linux-based. Completely new material offers the best explanation available on how Linux runs on real hardware.

Provides a complete, updated and easy-to-use guide to the MIPS instruction set using the MIPS32 standard as the baseline architecture with the MIPS64 as the main option. Retains the same engaging writing style that made the first edition so readable, reflecting the authors 20+ years experience in designing systems based on the MIPS architecture.

CouchDB: The Definitive Guide J. Chris Anderson, Jan Lehnardt, Noah Slater, 2010-01-19 Three of CouchDB's creators show you how to use this document-oriented database as a standalone application framework or with high-volume, distributed applications. With its simple model for storing, processing, and accessing data, CouchDB is ideal for web applications that handle huge amounts of loosely structured data. That alone would stretch the limits of a relational database, yet CouchDB offers an open source solution that's reliable, scales easily, and responds quickly. CouchDB works with self-contained data that has loose or ad-hoc connections. It's a model that fits many real-world items, such as contacts, invoices, and receipts, but you'll discover that this database can easily handle data of any kind. With this book, you'll learn how to work with CouchDB through its RESTful web interface, and become familiar with key features such as simple document CRUD (create, read, update, delete), advanced MapReduce, deployment tuning, and more. Understand the basics of document-oriented storage and manipulation Interact with CouchDB entirely through HTTP using its RESTful interface Model data as self-contained JSON documents Handle evolving data schemas naturally Query and aggregate data in CouchDB using MapReduce views Replicate data between nodes Tune CouchDB
