<u>Preparing for Future Products of Biotechnology</u> National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Chemical Sciences and Technology,Board on Agriculture and Natural Resources,Board on Life Sciences,Committee on Future Biotechnology Products and Opportunities to Enhance Capabilities of the Biotechnology Regulatory System,2017-07-28 Between 1973 and 2016, the ways to manipulate DNA to endow new characteristics in an organism (that is, biotechnology) have advanced, enabling the development of products that were not previously possible. What will the likely future products of biotechnology be over the next 5â€10 years? What scientific capabilities, tools, and/or expertise may be needed by the regulatory agencies to ensure they make efficient and sound evaluations of the likely future products of biotechnology? Preparing for Future Products of Biotechnology analyzes the future landscape of biotechnology products and seeks to inform forthcoming policy making. This report identifies potential new risks and frameworks for risk assessment and areas in which the risks or lack of risks relating to the products of biotechnology are well understood.

<u>Toward a Theory of Spacepower</u> Charles D. Lutes,Peter L. Hays,2015-03-18 This volume is a product of the efforts of the Institute for National Strategic Studies Spacepower Theory Project Team, which was tasked by the Department of Defense to create a theoretical framework for examining spacepower and its relationship to the achievement of national objectives. The team was charged with considering the space domain in a broad and holistic way, incorporating a wide range of perspectives from U.S. and international space actors engaged in scientific, commercial, intelligence, and military enterprises. This collection of papers commissioned by the team serves as a starting point for continued discourse on ways to extend, modify, refine, and integrate a broad range of viewpoints about human-initiated space activity, its

relationship to our globalized society, and its economic, political, and security interactions. It will equip practitioners, scholars, students, and citizens with the historical background and conceptual framework to navigate through and assess the challenges and opportunities of an increasingly complex space environment.

Smart Cities and Construction Technologies Sara Shirowzhan,Kefeng Zhang,2020-05-13 This book includes nine chapters presenting the outcome of research projects relevant to building, cities, and construction. A description of a smart city and the journey from conventional to smart cities is discussed at the beginning of the book. Innovative case studies of underground cities and floating city bridges are presented in this book. BIM and GIS applications on different projects, and the concept of intelligent contract and virtual reality are discussed. Two concepts relevant to conventional buildings including private open spaces and place attachments are also included, and these topics can be upgraded in the future by smart technologies.

Opening Up Education Toru Iiyoshi,M.S. Vijay Kumar,2010-09-24 Experts discuss the potential for open education tools, resources, and knowledge to transform the economics and ecology of education. Given the abundance of open education initiatives that aim to make educational assets freely available online, the time seems ripe to explore the potential of open education to transform the economics and ecology of education. Despite the diversity of tools and resources already available—from well-packaged course materials to simple games, for students, self-learners, faculty, and educational institutions—we have yet to take full advantage of shared knowledge about how these are being used, what local innovations are emerging, and how to learn from and build on the experiences of others. Opening Up Education argues that we must develop not only the technical capability but also the intellectual capacity for transforming tacit pedagogical knowledge into commonly usable

and visible knowledge: by providing incentives for faculty to use (and contribute to) open education goods, and by looking beyond institutional boundaries to connect a variety of settings and open source entrepreneurs. These essays by leaders in open education describe successes, challenges, and opportunies they have found in a range of open education initiatives. They approach—from both macro and micro perspectives—the central question of how open education tools, resources, and knowledge can improve the quality of education. The contributors (from leading foundations, academic institutions, associations, and projects) discuss the strategic underpinnings of their efforts first in terms of technology, then content, and finally knowledge. They also address the impact of their projects, and how close they come to achieving a vision of sustainable, transformative educational opportunities that amounts to much more than pervasive technology. Through the support of the Carnegie Foundation for the Advancement of Teaching, an electronic version of this book is openly available under a Creative Commons license at The MIT Press Web site, http://mitpress.mit.edu. Digital Entrepreneurship in Africa Nicolas Friederici,Michel Wahome,Mark Graham,2020-07-28 The hope and hype about African digital entrepreneurship, contrasted with the reality on the ground in local ecosystems. In recent years, Africa has seen a digital entrepreneurship boom, with hundreds of millions of dollars poured into tech cities, entrepreneurship trainings, coworking spaces, innovation prizes, and investment funds. Politicians and technologists have offered Silicon Valley-influenced narratives of boundless opportunity and exponential growth, in which internet-enabled entrepreneurship allows Africa to leapfrog developmental stages to take a leading role in the digital revolution. This book contrasts these aspirations with empirical research about what is actually happening on the ground. The authors find that although the digital revolution has empowered local entrepreneurs, it does not untether local economies from the continent's structural legacies.

Participatory Politics Elisabeth Soep,2014-01-31 An examination of the mix of face-to-face and digital methods that young people use in their experiments with civic engagement. Although they may disavow politics as such, civic-minded young people use every means and media at their disposal to carry out the basic tasks of citizenship. Through a mix of face-to-face and digital methods, they deliberate on important issues and debate with peers and powerbrokers, redefining some key dynamics that govern civic life in the process. In Participatory Politics, Elisabeth Soep examines the specific tactics used by young people as they experiment with civic engagement. Drawing on her scholarly research and on her work as a media producer and educator, Soep identifies five tactics that are part of effective, equitable participatory politics among young people: Pivot Your Public (mobilizing civic capacity within popular culture engagements); Create Content Worlds (using inventive and interactive storytelling that sparks sharing); Forage for Information in public data

archives; Code Up (using computational thinking to design tools, platforms, and spaces for public good); and Hide and Seek (protecting privacy and information sources). After describing these tactics as they manifest themselves in a range of youth-driven activities—from the runaway spread of the video Kony 2012 to community hackathons—Soep discusses concrete ideas for cultivating the new literacies that will enable young people to participate in public life. She goes on to consider some risks associated with these participatory tactics, including simplification and sensationalism, and ways to avoid them, and concludes with implications for future research and practice.

    Internet of Things From Hype to Reality Ammar Rayes,Samer Salam,2016-10-22 This book comprehensively describes an end-to-end Internet of Things (IoT) architecture that is comprised of devices, network, compute, storage, platform, applications along with management and security components. It is organized into five main parts, comprising of a total of 11 chapters. Part I presents a generic IoT reference model to establish a common vocabulary for IoT solutions. This includes a detailed description of the Internet protocol layers and the Things (sensors and actuators) as well as the key business drivers to realize the IoT vision. Part II focuses on the IoT requirements that impact networking protocols and provides a layer-by-layer walkthrough of the protocol stack with emphasis on industry progress and key gaps. Part III introduces the concept of Fog computing and describes the drivers for the technology, its constituent elements, and how it relates and differs from Cloud computing. Part IV discusses the IoT services platform, the cornerstone of the solution followed by the Security functions and requirements. Finally, Part V provides a treatment of the topic of connected ecosystems in IoT along with practical applications. It then surveys the latest IoT standards and discusses the pivotal role of open source in IoT. "Faculty will find well-crafted questions and answers at the end of each chapter, suitable for review and in classroom discussion topics. In addition,

the material in the book can be used by engineers and technical leaders looking to gain a deep technical understanding of IoT, as well as by managers and business leaders looking to gain a competitive edge and understand innovation opportunities for the future." Dr. Jim Spohrer, IBM "This text provides a very compelling study of the IoT space and achieves a very good balance between engineering/technology focus and business context. As such, it is highly-recommended for anyone interested in this rapidly-expanding field and will have broad appeal to a wide cross-section of readers, i.e., including engineering professionals, business analysts, university students, and professors." Professor Nasir Ghani, University of South Florida

<u>Learning Agile</u> Andrew Stellman,Jennifer Greene,2014-11-12 Learning Agile is a comprehensive guide to the most popular agile methods, written in a light and engaging style that makes it easy for you to learn. Agile has revolutionized the way teams approach software development, but with dozens of agile methodologies to choose from, the decision to go agile can be tricky. This practical book helps you sort it out, first by grounding you in agile's underlying principles, then by describing four specific—and well-used—agile methods: Scrum, extreme programming (XP), Lean, and Kanban. Each method focuses on a different area of development, but they all aim to change your team's mindset—from individuals who simply follow a plan to a cohesive group that makes decisions together. Whether you're considering agile for the first time, or trying it again, you'll learn how to choose a method that best fits your team and your company. Understand the purpose behind agile's core values and principles Learn Scrum's emphasis on project management, self-organization, and collective commitment Focus on software design and architecture with XP practices such as test-first and pair programming Use Lean thinking to empower your team, eliminate waste, and deliver software fast Learn how Kanban's practices help you deliver great software by managing flow Adopt agile practices and principles with an agile coach

The Globalization of Chinese Propaganda Kingsley Edney,2014-05-21 As China becomes more deeply engaged with the outside world its propaganda authorities confront a dilemma: how can they maintain domestic ideological cohesion in the face of an influx of foreign information and ideas while also convincing

skeptical international audiences that China's rise is a good news story? This book examines the Chinese propaganda system in the era of globalization, exploring connections between the Chinese Communist Party's desire for domestic political control and its vision for the development of China's international power. Investigating areas such as Chinese attitudes to soft power, the recent international expansion of the Chinese media, and the authorities' reaction to public opinion crises at home and abroad, Edney shows that in order to understand Chinese attempts to influence international views it is necessary to examine the power of propaganda in China's domestic political system.

Transnational Higher Education in Computing Courses Jenny Carter,Clive Rosen,2019-09-24 There has been exponential growth in transnational education (TNE) in the last few years as UK universities have looked to expand their markets. Recipient countries have sought short cuts to developing their higher education provision which has proved a lucrative income stream for some universities. But overseas collaborations are not without risk. Recipient countries can be concerned with external influence over curricula, quality being diluted and higher education being infected by neo-imperialism. These concerns are not without foundation. There are risks for providers too. Reputations can be damaged if academic standards are compromised. Conflicts of interest can occur between quality of provision and the pot of gold on offer. Staff can view overseas collaborations as distracting from their research and commitment to home students. Computing is a particularly popular subject for TNE, but critical thinking, analysis, independent learning, and creativity can be compromised. Preventing plagiarism is difficult. Constant changes in technology result in constant curricula revision which causes severe problems for overseas collaborations. This book focuses on TNE in the computing domain. However cross-cultural issues challenge TNE management and administration whatever the subject area. If the ever present tensions are not continuously monitored they can

quickly threaten the sustainability of the collaboration. This book identifies many of the threats and some of the solutions. The readership for this book is truly global. Any international development officer in higher education considering an overseas collaboration will benefit from this book. Any academic becoming engaged in, or already involved with a TNE partnership, either as provider or recipient, will gain information and insight into the practice and issues. Researchers in TNE will discover more lines of enquiry. Students considering a course with an overseas provider or in coming to the UK to study will be better prepared thereby enabling a more fulfilling and rewarding experience. Anyone who has an interest in TNE, whether at the senior executive level, operational level, delivering programmes or as a recipient of TNE should read this book. The wealth of experience gathered here will provoke questions, prompt debate and offer solutions. It has been written by people who know the issues, bear the scars and are happy to share their knowledge. It will greatly benefit future transnational collaborations.

Passion for Work Robert J. Vallerand,Nathalie Houlfort,2019-07 Passion is a pervasive concept in the work domain. Workers aspire to be passionate in the hope of finding meaning and satisfaction from their professional life, while employers dream of passionate employees who will ensure organizational performance. Does passion for work matter ? Does passion invariably bring about the anticipated positive outcomes or is there a darker side to passion for work that can also lead to negative outcomes for individuals and organizations? The goal of this book is to address these issues. This volume reviews major theories of work passion, focusing specifically on the dominant theory: the Dualistic Model of Passion. This theory distinguishes between two types of passion-harmonious and obsessive- and their associated determinants and consequences. This volume provides a comprehensive understanding of passion for work by addressing the origin of the concept and its theoretical issues: how

can passion for work be developed, what are the consequences to be expected at the individual and organizational levels, and how can passion for work shed new light on contemporary issues in the workplace. Passion for Work: Theory, Research, and Applications synthesizes a vast body of existing research in the area, provides insights into new and exciting research avenues, and explores how passion for work can be cultivated in work settings in order to fulfill both workers' and employers' hopes for a productive and satisfying work life.

Urban Hydrology, Watershed Management and Socio-Economic Aspects Arup K. Sarma,Vijay P. Singh,Suresh A. Kartha,Rajib K. Bhattacharjya,2016-10-25 The book brings together high-quality research articles on advanced hydrological analysis, advanced computational methods, and the ecological and sociological aspects of urban watershed management under one umbrella. The rapid pace of urbanization, not accompanied by any farsighted, holistic plan, has reduced many cities in the developing world into multi-hazard areas. The most perceptible consequence of urbanization is the change in land-use and land cover, which in turn impacts hydrological systems. Accordingly, scientific studies on urban hydrology with due emphasis on ecological and sociological aspects under changing climate are vital to the appropriate design of urban landscapes and civil infrastructure works. This book addresses precisely these issues, offering a useful guide for environmentalists, hydrologists, and a broad range of socio-economic scientists exploring the environmental vulnerabilities arising from urbanization.

Qualitative Research for the Information Professional G. E. Gorman,Peter Robert Clayton,Sydney J. Shep,Adela Clayton,2005 This established text is the only introduction to qualitative research methodologies in the field of library and information management. Its extensive coverage encompasses all aspects of qualitative research work from conception to completion, and all types of study in a variety of settings from multi-site projects to

data organization. The book features many case studies and examples, and offers a comprehensive manual of practice designed for LIS professionals. This new edition has been thoroughly revised and includes three new chapters. It has been updated to take account of the substantial growth in the amount and quality of web-based information relevant to qualitative research methods and practice, and the many developments in software applications and resources. The authors have identified a clear need for a new chapter on the evaluation of existing research, as a gateway into new research for information professionals. The final chapter, 'Human Resources In Knowledge Management', takes the form of a model case study, and is an 'ideal' qualitative investigation in an information setting. It exemplifies many of the approaches to qualitative research discussed in earlier chapters. Readership: Directed primarily at the beginner researcher, this book also offers a practical refresher in this important area for the more experienced researcher. It is a useful tool for all practitioners and researchers in information organizations, whether libraries, archives, knowledge management centres, record management centres, or any other type of information service provider.

Background and Management of Muscular Atrophy
Julianna Cseri,2021-03-03 A healthy skeletal musculature is necessary for a good quality of life and is important in sports. The loss of skeletal muscle mass leads to severe clinical complications and alters daily functioning. The aim of this book is to give an overview of skeletal muscle atrophy including pathomechanism, clinical characters, and the tools for prevention and treatment. Skeletal muscle atrophy can develop due to neurogenic or myogenic reasons, and frequently appears as an age-dependent disorder (sarcopenia). The studies of theoretical background give promising perspectives to prevent and treat muscle atrophy. The book is recommended to scientists, practitioners, students, sportsmen, and everybody who is interested in the normal and impaired function of the skeletal muscle.

Industrialization of Biology National Research Council,Division on Earth and Life Studies,Board on Life Sciences,Board on Chemical Sciences and Technology,Committee on Industrialization of Biology: A Roadmap to Accelerate the Advanced Manufacturing of Chemicals,2015-06-29 The tremendous progress in biology over the last half century - from Watson and Crick's elucidation of the structure of DNA to today's astonishing, rapid progress in the field of synthetic biology - has positioned us for significant innovation in chemical production. New bio-based chemicals, improved public health through improved drugs and diagnostics, and biofuels that reduce our dependency on oil are all results of research and innovation in the biological sciences. In the past decade, we have witnessed major advances made possible by biotechnology in areas such as rapid, low-cost DNA sequencing, metabolic engineering, and high-throughput screening. The manufacturing of chemicals using biological synthesis and engineering could expand even faster. A proactive strategy - implemented through the development of a technical roadmap similar to those that enabled sustained growth in the semiconductor industry and our explorations of space - is

needed if we are to realize the widespread benefits of accelerating the industrialization of biology. Industrialization of Biology presents such a roadmap to achieve key technical milestones for chemical manufacturing through biological routes. This report examines the technical, economic, and societal factors that limit the adoption of bioprocessing in the chemical industry today and which, if surmounted, would markedly accelerate the advanced manufacturing of chemicals via industrial biotechnology. Working at the interface of synthetic chemistry, metabolic engineering, molecular biology, and synthetic biology, Industrialization of Biology identifies key technical goals for next-generation chemical manufacturing, then identifies the gaps in knowledge, tools, techniques, and systems required to meet those goals, and targets and timelines for achieving them. This report also considers the skills necessary to accomplish the roadmap goals, and what training opportunities are required to produce the cadre of skilled scientists and engineers needed.
