Mind Reader Steve Godofsky,2009-06 Donny, Joey and Rose are best friends looking forward to a summer of fun and wilderness exploration before starting their senior year of high school. Little do they know that a chance encounter with a mysterious man is about to change their lives forever. After hiking around the spectacular waterfalls of Kenworth State Park, Donny saves the life of an old man, only to discover that he is a powerful Shaman. To express his gratitude, the Shaman gives Donny a gift like no other ever given - the ability to READ MINDS! However his unique gift comes with a few strings attached: it should only be used for good; Donny will get to keep the gift for several months but then he must decide to keep it forever or give it back; but if he decides to keep it there will be a price to pay. Donny has had a crush on Carla Banes for years. One of the most beautiful and selfish girls in Lake Monroe, she doesn't even know he's alive. However once she discovers his secret, Carla will stop at nothing to make Donny her pawn in order to take full advantage of his gift's financial possibilities. Joey and Rose want what's best for Donny but can they compete with Carla? Should the Shaman have trusted a teenager with such an immense responsibility? If Donny keeps his gift, what type of sacrifice will he have to make? Ultimately the only one who can choose is Donny, while knowing that his actions and decisions will determine the rest of his life!

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics: multiple cognitive processes are shared between reading and mathematics, including the representation and retrieval of symbolic information, attention, working memory, and cognitive control. Additionally, multiple brain networks are involved in both math and reading, and last, common genetic factors might influence both reading and math. Hence, it comes as no surprise that there are meaningful associations between (aspects of) math and reading abilities. Moreover, comorbidity rates between math learning disabilities (MD) and reading disabilities (RD) are high (up to 66%) and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities. Accordingly, the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math. The research topic aims to include the following topics: • Genetics - it has been found that both RD and MD are based on genetic factors and run in families. Moreover, math problem solving shares significant genetic overlap with general cognitive ability and reading decoding, whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability. Hence, this topic will explore the shared and unique genetic risk factors to RD and MD, In addition to shared and unique genetic influence on reading and math. • Neural perspective - converging evidence from both structural and multiple functional imaging studies, involving a wide range of numerical tasks, points to the intraparietal sulcus (IPS) as a core region that involve in quantity manipulation. However, several additional brain areas, such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks. Individuals with MD show deficits in a distributed, set of brain regions that include the IPS, fusiform gyrus in posterior brain regions and pre frontal cortex regions. Similarly, converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus, temporoparietal cortex, and pre frontal cortex regions are strongly involve in typical reading and present lower activity, connectivity or abnormal structure in RD. Thus, there is a meaningful neural overlap between reading and math. Hence, the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading (commonality and diversity) both in the typical and a-typical development. • Cognitive factors that play role in mathematics and reading, and comorbidity between RD and MD - There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not. Multiple cognitive processes are shared between reading and mathematics. Therefore, impairments in any one of domain-general skills could conceivably play an important role in both pure and comorbid conditions. Moreover, it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts. • Education - it will be interesting to look at the effect of interventions that aim to improve reading (such as phonological awareness) and there transfer effect on improving mathematical processing. Alternatively, it will be good to test whether math interventions will improve reading.
