Botnets Heli Tiirmaa-Klaar,Jan Gassen,Elmar Gerhards-Padilla,Peter Martini,2013-06-29 Malware poses one of the major threats to all currently operated computer systems. The scale of the problem becomes obvious by looking at the global economic loss caused by different kinds of malware, which is estimated to be more than US$ 10 billion every year. Botnets, a special kind of malware, are used to reap economic gains by criminals as well as for politically motivated activities. In contrast to other kinds of malware, botnets utilize a hidden communication channel to receive commands from their operator and communicate their current status. The ability to execute almost arbitrary commands on the infected machines makes botnets a general-purpose tool to perform malicious cyber-activities. Botnets provides a comprehensive analysis of the topic, and comprises both technical and non-technical sections written by leading cybersecurity experts. The non-technical section addresses how botnet infrastructure could be exploited for national security and cybercrime purposes. It approaches the subject as a public policy issue and analyzes the phenomenon of botnets from national security, law enforcement and regulatory policy perspectives, and makes recommendations for policy-makers on different public policies, highlighting the need for international response mechanisms. The technical section provides insight into current botnet techniques and discusses state-of-the-art countermeasures to combat the botnet threat in detail. It includes new detection methods as well as different approaches to actively compromise running botnets.

Malware and cyber crime Great Britain: Parliament: House of Commons: Science and Technology Committee,2012-02-02 Malicious software - designed to infect computers to steal bank details and identity information - poses a growing threat in the UK as more people use the internet and an increasing proportion of economic activity takes place online. The Science and Technology Committee say the Government must do more to help the public understand how to stay safe online. It calls for a prolonged awareness raising campaign to increase public understanding of personal online security. Eighty per cent of protection against cyber-attack is routine IT hygiene, yet currently there is no single first point of advice and help for consumers and much of the online information about internet security is often technical or jargon filled. Television exposure is crucial to gain the widest possible exposure to the safety message, and more should be done to promote and resource the existing Government website Get Safe Online. Advice from Get Safe Online should be provided with every device capable of accessing the internet and all Government websites should link to the website and highlight the latest security updates. The provision of Government services by the 'digital by default' policy will increasingly require those in receipt of Government benefits and services to

access these online. The Committee raises concerns that the scheme will be of greater use in protecting the Government against welfare fraud than the individual user against crime. The Government should investigate the potential for imposing statutory safety standards if the industry cannot demonstrate that voluntary self-regulation can improve security.

Governing Privacy in Knowledge Commons Madelyn Rose Sanfilippo,Brett M. Frischmann,Katherine J. Strandburg,2021-03-25 Governing Privacy in Knowledge Commons explores how privacy impacts knowledge production, community formation, and collaborative governance in diverse contexts, ranging from academia and IoT, to social media and mental health. Using nine new case studies and a meta-analysis of previous knowledge commons literature, the book integrates the Governing Knowledge Commons framework with Helen Nissenbaum's Contextual Integrity framework. The multidisciplinary case studies show that personal information is often a key component of the resources created by knowledge commons. Moreover, even when it is not the focus of the commons, personal information governance may require community participation and boundaries. Taken together, the chapters illustrate the importance of exit and voice in constructing and sustaining knowledge commons through appropriate personal information flows. They also shed light on the shortcomings of current notice-and-consent style regulation of social media platforms. This title is also available as Open Access on Cambridge Core.
